That was the very first "mod" for the 720, you were supplied a little
1.5 mh choke and a capacitor and resistor, the supplied a few
microamps of current through the rotary
switch contacts to keep them clean.

Icom has the mod, if they can't find it, I have the data here, it's a
bit of a job to get inside the RF section, but not impossible.

If the problem started after you did some other surgery, you certainly
knocked something loose.

> USA AMATEUR RADIO HISTORY AND LICENSING
> URL: http://ac6v.com/history.htm

==========

As a non-USA radio amateur with an interest in engineering history of all sorts, I would like to say to AC6V "Thanks You" for compiling the above condensed History as influenced by the perseverance and persistence of USA amateurs, engineers and far-sighted legislators. It cannot be denied the USA has led the international field ever since the amateur radio hobby's beginings.

It is, of course, much more than just a spare-time technical hobby. Amateur communications between nationalities has oiled beyond measure, and will continue to lubricate for many years, international relationships at the vital level of ordinary citizenship.

Inevitably there will occasional set-backs. Get rid of the interference from B**h and B***r and working DX with Baghdad, Pyongyang, etc., will be worth at least another 150 sunspots on the 10m band.

If the caps are old, I would go ahead and change them. Surplus Sales of Nebraska has kits that include all the caps for the power supply for about $60. They are pricy, but they are good quality caps and they will fit. Some are actually too small and you have to rearrange the way they are mounted.

I would also check the transmitter and replace any of the old Black Beauties if they are still in there, or their replacements if they are old.

Good luck.

You neglected to mention the communication process that enabled Alexander the Great to achieve his victories.....

He developed a chemical process such that a piece of cloth treated by it, would change color in a known time. Having this, his troops could engage in coordinated attacks though they were out of visual range of each other. It became known as the Alexander rag time-band.

> ones"

I think you need to learn to read!
The Swap Meet is on SATURDAY morning, NOT Sunday.

IF you're sreious about the hobby you'll be there early.

If you want to change it, why not plan one yourself
and have it start at noon. Of course you better
have a way to lock the gates to keep the early birds
from setting up at 6AM.

I've been planning and running these events for over twenty
years, and starting early is JUST THE WAY IT IS.

HAPPY NEW YEAR ! ! ! !

Source record: 35631

The very first mod sounds as though it only keeps the RF contacts on the rotary relay clean (I think I may have seen it in the ICOM 720 notes). I also did a mod whereby the rotary relay contacts going to the CPU were kept clean as this was the problem in my case.On each data line going to the CPU via the switch I fitted a (~)4k7 resistor to ground (7 x 4k7)(after the rotary relay contacts). I also fitted 4K7 resistors from supply to the common contacts on the preamp/attenuator relay as this gave intermittent problems as well.

Hi Jos,

The symptoms you describe are the classic symptoms of bad
filter capacitors. The caps have become verrrrry leaky, or
have shorted, and are over loading the rectifiers.

You might still be able to reform the caps, but I kind of doubt
it. Replace the electrolytics, and put in new filter caps,
and your supply should start to behave once again.

Whatever you do, don't just keep stuffing new fuses and rectifiers
in the supply. Sooner, or later you will succeed in toasting the
power transformer.

-Chuck, WA3UQV

1N4007s are fine for all of them. Just get a roll of fifty 1N4007 diodes
and use them for everything. Digi-Key sells them cheap but Radio Shack
probably even has them if you only want a few.

>Any thoughts or suggestions appreciated...Thanks in advance..Jos..

Check the electrolytics. Almost certainly your problem is a bad one.

It's a sure bet that you didn't pay that much for them.

Of course, I'm glad we live in a country (USA) where
you're birth right is to exploit the free-enterprise
system as best as you can.

Call me cynical, but I just can't understand how some
Ham would try to make such a profit, off of other hams.

I've always been under the impression that Hams would
always try to HELP other hams, not take advantage of
them.

Don't feel bad. I feel even more strongly about those
hams who utilize the internet for nothing more than
browsing obituaries searching for 'ham operator' and
then trying to bilk the widow out of years and years of
radio/electronic parts collections for literally pennies on
the dollar, and then turn around and sell it for above
fair market value.

*ONE* case in point is out of an estate, one such 'feather
merchant' got the -whole- of a Radio lot for $1,000. In
this collection was a Collins R-390, that was in *excellent*
shape, and the 'jerk' sold the R-390, by itself, for $1000.

Am I wrong? To me, there's just something morally wrong
with that.

Have a Happy New Year, anyway.

For Sale or Trade : Standard C-5718DA 144/440 FM Mobile Radio
Hi I have a Standard C-5718DA Mobile Radio which I bought new. However I just purchased another car and deceided not to install the radio in this car....The radio is fully modified...for out of Band use...also has 800 MHz coverage....Plus can receive AM....
I have the optional Memory chip which allows for 100 memory channels per band....I also have extra mic cables 12' and 25'. The power output as indicated by a Bird wattmetter into a Bird Termaline Dummyload is : 55 Watts on 2 meters and 42 Watts on 440...I have the original manual and box. I would prefer a swap for a functioning High Frequency Radio.....However I will consider selling the unit for cash......

Ignore the important part, and go straight for the insult?

(grinz)

not a problem. The $30 posting for used tubes wasn't
serious. It was rather rhetorical, actually. I don't plan
on selling the 4CX250B's. I think a pair would make a
great modulator. I've also got a transistorized power
supply, that takes 13.8vdc in and delivers around 3kVDC
at 300mA. Do ya think that 100mA on the plate of a
single 4CX250B @ 3kVDC with a pair modulating it
would make for a decent sounding mobile AM rig? :-)

Seriously, that's a project I want to get started on.

I've got a Johnson Navigator that, with the 6146 pulled
and a 2E26 put in it's place, and an attenuator to pull
the RF output even more, would be sufficient to drive
a single 4CX250B.

Happy New Year
73 = Best Regards

## 24. Ideas sought on the modern approach for power supply fot tube rx.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-02 00:56:24 UTC
From: Richard <nearlynews_email@ntlworld.com>
Message-ID: <av02lp$akb8v$1@ID-150848.news.dfncis.de>
Source record: 35547
Cross-posted to: rec.radio.amateur.boatanchors,sci.electronics.basics

Hi.

Below you will find a circuit for a tube Rx. By today's standards it's probably not that good a circuit. If I kept the mains transformer and ditched the chokes, any ideas of what a modern design would likely be to give the output voltages and stabilisation?

http://homepage.ntlworld.com/richards_internet/Under_Construction_01/power.htm

R310 = 680K C306 = 4u
R311 = 7.5K C314 = 8u
R312 = 3.3K C315 = 8u

Apart from the bulky chokes, there is too much hum. I want no hum at all.

I love my radio, but I don't know much electronics, thanks if you can just point to what you think the changes should or ought to be. Rich.

NB: Crossposted, you might want to just reply in the group you are in.

You want no hum at all? Run it on batteries. The 12v car tube radios
did well with that B+. Many other tubes not actually made for low
voltage will work quite well that way.

Y'know, for that matter, I could probably build up a solid
state vfo with enough buffered output to directly drive
the grid of the 4CX250b final... hmmm...

Ha. Well, maybe I'm being unrealistic about zero hum. I get that with my Hi-Fi, but that's Hi-Fi. What hum does one hear these days on a modern communications Rx I wonder.

## 29. Quaker Oats Antenna

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-02 02:48:57 UTC
From: James Hilins <jhilins@wi.rr.com.REMOVE>
Message-ID: <tMNQ9.67762$Zt4.792935@twister.rdc-kc.rr.com>
Source record: 35552

(Receive only antenna for Antique Console Radios)

I'm going to turn a loop antenna on Quaker oats tube. The Idea here is to turn enough to get it resonant some where in the AM radio band, then tap off shorter for higher freq SW bands. I have a bag of 1.5pf - 5pf variable capacitors to help tune the impedance.

So I hope to pick the brain trust out there to help save some time and experimentation.

One idea is to turn it from the center of the tube to one end clock wise and from the center to the other end counter clockwise center tap it and use the trim cap to cancel out the inductance. This way the currents are opposite but equal (kind of like a dipole wrapped on a oatmeal box, with each leg wound in opposite directions) I'll keep adding turns until my MFJ antenna analyzer is happy.

Another idea is to turn it from one end to the other attach ground to one end and then start tapping from the other end for AM and SW bands use the trim capacitors as needed to cancel inductance.

Anyone out there have any experience with this? Any other construction techniques?

Jim Hilins

Now, that sounds something similar to how I tune out the reactance in a mobile antenna.

I -like- the idea of having a DC Grounded antenna, which is what you'll have.

I use a bug-catcher antenna. Vertical antennas are inherently low in impedance at lower frequencies. A 6 turn coil, about 2" in diameter is what's used with the bottom side of the coil attached to the middle of the base section of the radiating element (the part that screws into the ball mount) and a clip lead or something, one end to ground, the other to some point on the coil, until the SWR goes down, at the resonant frequency. (A point at which those two items don't occur simultaneously. Check your field strength meter). This, of course, is for transmitting.

For receiving, the more wire the better. Wind up a couple of oatmeal antennas, wire them in series then use a trimmer capacitor between the output of the coil to the receiver front end. L is constant, C changes, therefore the resonant freq
will change, too.

If you -really- wanted to get the length of wire needed for a dipole, take 468/F(Mc)

so, if you're looking for something *around* 1000kc (1Mc, for simplicity sake) you can easily see that 468' is what you'll need. That's 238' per side.

Ever think about two windings, one inside of the other?

I don't think so Jeff,

winding it into a coil will shorten the antenna !

likely I'll need a 1/4 or less of the length because the inductance of a coil is higher than a straight wire of equal length.
Jim

17 vintage Panel Meters all in like new condition, some are new-all were tested and have been stored in double wrapped cellophane or boxed. Model numbers and type are marked on all the meters. Scales are all numbered and easy to read. All are bakelite cases and glass fronts. Most were obtained from Western Electric stock used for AT&T/Western Electric transmission and communication projects in the WWII era to the 50s. All are 3 1/2" circular diameter panel meters with a couple of exceptions. Here is the list: GE RF Amperes Meter 0 to 20 amps .5 amps/div non linear scale, Tipptronic Inc. Meter Relay 0 to 20 DC micro amps .5 microamps/division, Western Electric Volts DC Meter 0 to 500 volts DC 10vdc/division, Weston Milliammeter DC 0 to 100 ma 5ma/div, Weston Milliamperes DC 2 Scales 0 to 100ma and 0 to 10 ma with 1ma/div and .2ma/div respectively, Weston Milliamperes DC 0 to 300ma 5ma/div, Weston Volts DC 0to 500 VDC 10vdc/div, Modutech DC Microamperes 0 to 200 microamps 5microamps/div case is rectangular 3"X21/8", Marion Electrical Instrument Co. Needle center scale upper scale plus or minus 115 VDC and lower scale S<BIAS>M Plus or Minus 100 milliamps meter glass face is convex, Westinghouse DC Milliamperes 0 to 800 ma 20ma/div Front Bakelite case engraved "NBC 217 LAB", Marion DC Microamperes 0 to 50 microamperes 1 microamp/div, Weston Milliamperes DC 0 to 25 ma 1ma/div, Western Electric Microamperes DC 0 to 50 microamperes 1 microamp/div, Modutech Intelectron DC Milliamp 0 to 25 ma 1ma/div circular meter mounted in rectangular 3" X 2 1/8" 1 3/8" diam. meter, DeJUR PACO Microamperes meter 0 to 500 microamps DC 20 microamps/div 1 3/8" diam meter mounted in 1 3/4" square frame, Weston milliamperes DC 0 to 50 ma 1 ma/div, Simpson Meter Relay M85 Relay 200 to 500 ma DC 25ma/div new in its original box. Please email me if you have any interest in these meters or any particular one. All reasonable offers will be considered. Thanks and 73s, Don WA1TVH dpelrine@c4.net

Jeff:
Would it make you feel any better if I told you that I paid $50 for each tube and would sell it to you for $47.50? Just
Wondering...
FYI-current market price from any reputable dealer is anywhere from $75-$125 for a NEW 4CX250B and I am not taking and ocassional
Ebay item, so at $47.50 how do you figure a 'rip off'?? Does not matter if I paid 1 cent or $1000.
In the market place "Value" is only what the end user is willing to pay for an item....regardless of what the product/service
is....$$$ spent should=product or service received....you know supply and demand...
AND I sell used 250B's for $25/each, so your $30 offer seems like YOU are the one trying to rip off fellow hams.

ANYWAY , nuff of this, if you are interested in my offer BUY if not DON'T....and let's other people make their own decisions,
simple as that.

Happy New Year to you too~~~

sure. I agree that you don't need as much wire..
but there's a good starting reference, as to how much.

a quarter wave is 234 - 1/4th of that is ~60'?

small wire diameter, is needed. I still say, the more wire the better.

lengths aren't critical for receive only antennas.

sounds like a nice collection of meters, Don.

You know, it doesn't really matter what the meter face says, it's what
the required current is, for full-scale reading. ie: a 1maDC movement meter
with 3megohms of resistance, will take 3kVDC to move it to full scale.

(I can hear the calculators, now ;->)

I know this is the Boat-anchor group, but does anyone home-brew anymore?

## 37. Re: Matching 50-year-old paint

Look for any place on the cabinet where the original paint still shows - on the inside, back edges, etc. Or if it was repainted without stripping, carefully scrape off the repaint to expose the original color.

Either way, then take it to a local auto paint supply shop (note: this is a supplier, not a user of auto paint). They can do a computer color match to the original and make up a spray can or whatever you need.

Regards,

Phil

Yes, I do homebrew... Not so much "radio" gear but other items such as test equipment. I've managed to make some things costing 1/10 of that available on the market and it has saved me a lot of aggravation and guess work in the repairs.... I have a ton of parts and such here to do more, just haven't found anything worth my time to homebrew lately. Homebrewing "is" fun.... I taught a class not long ago and the end result was just that, a homebrewed project... I've had an encore for another class and project. My biggest beef is, I don't want my students to build something only to have it wind up in the bottom of a drawer. To me, if you're going to take the time, effort and what is involved in expense to build something, I would think you want something of use at least on an occasional basis and something you can show proudly.

Jos,
If you mean to replace the tubes with new ones fine, but if you mean that you are going to replace the tubes with diode strings, then be aware that you will need about 200 ohms (10 Watt) in series with the LV B+ lead to drop the voltage a bit.
Ron

Hi, Lou.

You've hit exactly on what I think is the 'Spirit' of Ham Radio. Being able to cuss and discuss the ideas and merits of one's circuits, adding them together and coming up with something that not only -is- useful, but as far as the radio operator is concerned, can actually put on the air, and say "rig here is Home-Brewed"...

Of course, there are those who troll the bands and say "did you blow your own glass, to make those tubes? did you machine those plates for the tank capacitor? did you wind your own transformers, grind your own crystal, etc..."

If you delve -that- deeply into the home-brew process, where does it stop? Using that (ill)logic, you could say 'what chemical components did you use to make the grinding polish', or... well, you get the idea.

No, I didn't pull the wire, didn't dip it in a vat of melted rubber to make the insulation, the meters aren't hand-wound... but, before this stuff was put together, it was nothing more than just parts and parts and more parts.

To gather up a bunch of parts, and coerce a bunch of electrons to be sent off into the ether, not knowing who/what/where they'll wind up, have someone hear it, and actually return those electrons to you, to converse in every-day speak... it's still amazing, to me. I still get a tingle up my spine, when I put
together a rig, make it work, and get on the air with it. That just doesn't happen in the day-to-day world.

Pride in yourself. Something I think we can all live with. but not so full of pride that you're 'outstanding in your field' because you're all alone, but that's for another group ;-)

Happy New Year!

you want me to feel sorry for you, because you're not smart enough to get more than what you paid for the tubes? No - that's not going to happen. And, yes - I -did- say "get more than what you paid", because that's the business you're in - profit. Not that it's bad, I own a computer business. I just can't do it in the Ham Radio realm.

Yep... power supplies for surplus, generally. TCS, ART-13, 18S-4, 618T, et al. But you've made a point. I don't think too many of us do receivers anymore. An amplifier, here and there, or a modulator, maybe. It isn't that some don't want too.. its just that some parts are getting very hard to find.. and at a "buyable" price... hi..

Good price and good description of the problem. From my experience people and I am one of them, buy on the newsgroup to get an
item below market value. Ebay will usually get you the best price for an item and Hamfests are all over the map as far as prices. I
usually take the low end price that am item sells on ebay as being the true market worth.

Have a Happy New Year,
Ron WA0KDS

That's the neat thing about some of the old time 'hams' around here - if they've got it, and you need it, it's yours. Because they -know- that it'll be used. If it's
something you've got, and they want it for project they 'might get started on, sometime when I get tired of watching the (ho-hum) grass grow' or some such foolishness, then no - you don't get what you want, until you -need- it. I like it
like that.

I've got an RF deck out right now, that I told the guy, 'if you use it, you can -have-
it. if you don't use it, I want it back, and no - I don't want $250 for it. It's MINE
and if you USE it, you can HAVE it."

Quite often hum in a tube Rx is down to the wiring layout, particularly
the heaters, rather than the PSU. The wiring around the early rf & af
stages and the local oscillator are particularly important. I've built
several tube radios over the years, and I've learned the importance of
layout the hard way - and I won't tolerate hum! Running the heaters on
DC is one cure.

My ancient (tube) Racal has virtually no hum* - certainly less than my
Kenwood R1000 which has a faint but annoying hum on headphones.

* Racal quote better than -50dB at 1mW output with the AF gain control
at maximum.

## 57. FS: Tunable VTVM/VLF Rcvr

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-02 20:13:40 UTC
From: Walter Treftz <penguino@atlantic.net>
Message-ID: <3E149D72.314B99DF@atlantic.net>
Source record: 35580

FS: Sierra 121-A, tunable VTVM

Freq range: 10khz - 510 khz

Controls:
Attn Steps: -60/.001, -50/.003, -40/.01, -30/.03, -20/.1, -10/.3,
and 0/1
Input Level: 0/1, +10/3, +20/10, +30/30, +40/100
Injector Sw: CAL & REC
Meter Sw: CAL & REC
IF & AF gains
Headphone jack on front panel
Meter Scales: -10 to +2 db, 0-1v & 0-3v

Comes with manual copy and my parts replacement notes.

I got this at a hamfest with intent of using for VLF rcvr. Bought
a manual and started replacing parts (leaky caps, out-of-
tolerance resistors, etc) even though it was working (having
never used one, had no idea if it was working well or not but
signal generator punches through). THEN, couple weeks ago picked
up a Sierra 128-A (same gadget) at another 'fest and it appears
this is the one to keep (rack-mount like rest of my station,
solid-state, much larger freq range - DC to about 15 mhz, etc.)

Can send digital pix if desired.

If interested, make a reasonable offer. Buyer pays shipping.
No extra charge to pack up and haul to USPO or UPS. If in central
Florida, can deliver (Gainesville to St.Pete)
for gas or beer.

Any questions, contact direct at -- penguino@atlantic.net --
or (352) 637-1755

73 Walt (N4GL)

BTW, if anyone reading this has a 128-A and the manual, would
like to hear from them re getting a copy.

Like you I dislike hum, I want perfect silence. Good points about the heaters, maybe running them of a well smoothed 6v (or whatever the DC value should be) PSU would help.

If DC is selected I would suggest using a "current regulator" rather Than a "voltage regulator" to get rid of the residual AC ripple.

Bill K7NOM

If DC is selected I would suggest using a "current regulator" rather
Than a "voltage
regulator" to get rid of the residual AC ripple.

Bill K7NOM

Should have said that the Current Regulator would probly have to be
supplied for each tube (one per tube).

Bill K7NOKM

Hello Everyone,
I am looking to purchase a HQ-180 in good working condition and in nice shape. Please contact me if you have any of the 180 series for sale. Can you please email me some pictures if possibly. Also, please give me your best asking price,any details,etc. Thankou very much, Peter

## 68. FS: Shack Cleaning

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-03 08:42:21 UTC
From: Michael Prevatt <ku4yp@earthlink.net>
Message-ID: <N1cR9.9727$134.1091790@newsread1.prod.itd.earthlink.net>
Source record: 35591
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

hello,

have the following items for sale. cleaning the shack and trying to scrape up enough $$$ to buy the new ten tec argonaut rig.

1) Kenwood ts-130s. 80-10, including WARC bands. 100w out on 80-15. 70 on 12 and 60 on 10 (from my mfj meter) cosmetics is about 7.5 to 8 of 10. i have never had the rig mobile. have stock kenwood hand mike. no manual. comes with power cord. with this is a mfj 941-c tuner. no dummy load. 300 watt tuner. single meter. i would also include my homebrew psk31 interface that is already wired to work with this rig. interface is in a radio shack enclosure. have schematic and hook up instructions. price for this lot $220.00 plus shipping.

2) Swan 270b. comes with manual. only about 50 watts out. final needs replacement. cosmetics very good. someone nicely re-paited the top half of the front face white. can send a pic so you can see for yourself. comes with matching swan wm-2000 2000 watt meter. also, matching sure 444 desk mike with swan logo. for those who have not ever seen this rig, it is the cygnet series with the power supply in the rig. covers 80-10, no WARC. price $130.00 plus shipping

i would be open to resonable offers. both of these rigs are in use in my station now. they are NOT new, but have served me well. just looking to upgrade. all prices plus shipping from 33860. shipping done by mailboxes etc. and packaged very well. payment with postal money orders.

73 and tnx for the read.

If you're building your own radio DC heaters shouldn't be necessary. Wire the
heaters with a twisted pair of wires pressed down against the chassis and
routed well away from signal circuits, and preferably in one long chain
finishing with the rf amp or mixer. Leave the heater winding on the
transformer floating, ie not grounded, and fit a 1 KOhm preset pot across the
heater of the last tube in the chain with the slider connected to ground and
adjust for minimum hum.

Message-ID: <3E15A7E7.283DFFB5@erols.com>
Source record: 35593

Very good idea (depending on which S-38 you're looking at, hopefully an early one!!). Please conspicuously post when they're ready. Any chance of getting the hallicrafters logo and name, too? (like they put on speakers, R-42 and R-46, for example?). I heard that the folks at Datak would provide hallicrafters decals (rub-off type), but I never contacted them. The Datak series have pretty much all the needed words, but yours would have the correct "type". Thanks!!

Building a B+ regulator with a zener string and a TIP50 darlington will
give you very smooth B+.

However, a properly-designed pi filter with good quality chokes and modern
capacitors can be almost as good.

## 75. CC-AWA Annual Conference in Charlotte, NC

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-03 16:51:48 UTC
From: kc4yoy@trellis.net
Message-ID: <d98f9107.0301030851.54f31ddd@posting.google.com>
Source record: 35498

It's time to start making your plans for the
CC-AWA Annual Conference in Charlotte, NC.
"The Spring Meet in the Carolinas"
on March 20-21-22, 2003, Thursday, Friday & Saturday,
at the Sheraton Airport Plaza Hotel.
This is the same GREAT location as in the past 9 years.

You can find all the details about the Conference
including information on making your hotel reservations
via email and a listing of all Conference Registration Fees.
You can now pay your Conference Fees "on-line" with your
credit card via PayPal.
Visit the CC-AWA web page at, http://www.cc-awa.org
Just click on the long black button for the
"Charlotte Annual Conference".

As always, there will be NO buying, selling, trading
or displaying of merchandise bofore our now famous,
and much duplicated "LeMans Start"
at 8AM on Friday March 21st.

If you have attended the Conference in the past
you will automatically receive a brochure in the mail.

Just like last year, all dues paying members of the
CC-AWA will automatically be pre-registered, FREE.
This is for "Carolinas Chapter" members ONLY.

This is the largest antique radio collecting event
in the south. And one of the PREMIER events of this
type in the country.

There will 3 days of forums, contests, flea markets,
auctions & social events.
3 DAYS OF RADIOING YOUR BRAINS OUT.

The Thursday afternoon program session will be all about
Radio Preservation & Restoration, "Hints & Kinks".

Thursday evening our guest speaker will be noted
writer of antique radio books Mark Stein.

DON'T MISS IT ! ! !

>What is a heathkit?

Heathkit was a company based in Michigan that made electronics kits of all types. They are out of the kit business now, but at one time they packaged kits for everything from test equipment to color televisions to ham and stereo equipment. Just do a search for Heathkit on e-Bay and you'll see much of what they produced over the years.

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS: Old QCWA (Quarter Century Wireless Association) Yearbook. The cover says "QCWA 1957 10th Anniversary Year Book", but the contents of the book do show the officers for the 1960-61 period, and the listing of Silent Keys through 1960.

The book's contents list the members' calls, names and addresses for each of the 10 call areas, for KH/KL/KP/KZ and "Other Countries". Also included in the book are the QCWA's Constitution and By-Laws. An interesting piece of Ham Radio History. $5 plus postage.

Got the Klez a few months back and it disabled my virus program!
Then it started sending out infected emails on its own, so I had to wipe out the drive and start from scratch. The sad thing is I got it while downloading some Ham radio program off the net.

Source record: 35516

I let it go the first time around but since it's been added to, I
suppose I'll jump in.

You know, fellas, the prospective buyer asked reasonable questions.

"Is the receiver for the same band as the transmitter?"

Considering that the seller did not really say what band the
transmitter is for (7040 suggests 40 meter but...) or the receiver
(It's a good idea to have the T and R on the same band) so such a
question is rasonable.

"Do they both have the cases and knobs?"

Considering that Ramsey sold both as options with the kits, this, too,
is a reasonable question. If they didn't have knobs and cases and the
prospective buyer needed to buy them or make them, this might have a
bearing on the sale.

and Jorge, you said, "EIGHTEEN BUCKS for a complete QRP station". You
know, the questions that the prospective asked were pointed at that
same statement: Was it complete? If it wasn't complete (or if the T and
R were on different bands) that would really affect the usability of
the equipment. Cases and knows might add $20-30 dollars tothe price if
the buyer didn't have a decent junk box or was unable to homebrew
something on his own.

And, yes, EIGHTEEN BUCKS is enough money to worry about. If it isn't,
please mail $18 to me. I'm good in the callbook.

Fellas, please don't go off halfcocked next time, huh?

Jeff KB7AIL

I didn't think motor generators were used in modern equipment, much less space probes, anymore. I would have thought a solid state switching power supply (DC-DC converter) would have been used.

If you have a standard SWR bridge you should be able to pull of something
that you could scale properly for the tuner.

If you don't, I think the ARRL Handbook has directions on building SWR
bridges.

From: Mike Hagerty <mhagerty@mako.com>
Message-ID: <jOER9.716$j22.639048@newsfeed.slurp.net>
Source record: 35524

Greetings to all. I have a Marantz 2500 that just quit working yesterday. There is no power to the speakers. The relays click 5 seconds after power on, all lamps, indicators, cooling fans and CRT "O-scope" are working. The CRT displays a source signal or tuner signal input and all CRT tuning modes work. There are 10 fuses and 2 relays I can see and all are showing good. There is no detectable sound from the speaker output, no scratching, clicking, hissing, popping or humming, nothing from either channel. I am guessing that a relay is stuck open or has bad contacts. I just seems that all of the banks of drivers would not all go out at the same time. Does anybody out there have any thoughts or schematics or ideas?
Thanks in advance for your time and consideration.
Mike H.

## 107. Old SWR meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-04 18:15:41 UTC
From: Whoever Wherever <jgajmears@email.msn.com>
Message-ID: <#1IlJ2BtCHA.2148@cpimsnntpa03>
Source record: 35528

I have just come into possession of a Model 415B Standing Wave Indicator made by Hewlett-Packard Co. in Palo Alto, Ca. It has a low serial number and was used by the US Army Signal Corps. It has a combination old ID tag on it with the Signal Corp. and Hugh Aircraft Co. There is also an old tag glued on that has USA 05. It looks to be in good shape from the outside. The finish is the old grayish brown that is metalized. The fuse is missing out of the back so can not plug it in and see if the tubes light up. The meter on the front is about 3x4 inches with Hewlett hp Packard on it and also square law detector. The ranges are for SWR, Expanded SWR, DB, and expanded DB. It has a 1/4" female plug for BOLO. Current. There is a three position switch. One for BOLO/200ohm, one for CRYSTAL/200ohm and one for CRYSTAL200Kohm. It has a wire flipdown bail in the front for tilting and has a leather handle on the top for carrying.

Does anyone have any history on this type of equipment? What and where it would have been used for? I'm guessing it was used on aircraft from the old Hughs ID sticker. I'm guessing it's from sometime in the 50's, maybe earlier. Would it still be good for anything today or use to anyone?

John Mears

## 108. FS- Hallicrafters SR-2000 Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-04 18:22:54 UTC
From: JM <jdm@NOSPAMiland.net>
Message-ID: <3E17267E.931BF763@NOSPAMiland.net>
Source record: 35529

I have for sale a Halli SR-2000 transceiver with P-2000 power supply.
Works great on receive but I have never transmitted with it. I did hear
it on the air before I bought it and it sounded great. Xcvr looks good,
has had mike connector changed to a 1/4" jack. Has original manual,
spare tubes including a pair of what appears to be new 8122's.
The power supply has some cabinet damage from FedEx shipping, nothing
real bad, the damage is at the back lower corners and can be
straightened, cannot be seen from the front. PS has had filter caps
replaced.
I want $825 plus shipping from zip 65301, sold AS IS but guaranteed to
not be DOA. I am taking quite a loss on this as it is so price is not
negotiable. Also available is an HA-20 vfo that I will include for $100
more. Looks good but doesn't have the external coupler.
When purchased I had intentions of getting on the air with it, but
dealing with FedSux over the last 8 months has been nothing short of a
nightmare, and I want to see it out of my sight. I will not ship FedEx
unless you have them come pick it up. It will be double boxed in two
packages, xceiver weighs about 58# boxed and ps weighs about 68# boxed.
Email direct if interested, remove NOSPAM from my address to reply.

John in Missouri

## 109. FS- Halli SX99, Hammarlund HQ-110

Newsgroup: rec.radio.amateur.boatanchors

Source record: 35531

HP test and measurement Company is now Aligent Technologies -- but HP built thousands of these units -- used by design labs, calibration labs and production testing as well as other areas. They were high end laboratory test equipment for industry. So lots of them out there and not a collectable or of any great value.

Example: There is a 415E model at E-Bay -- currently $25 with no takers -- so not particularly of value. New the 415E sold for $1050.00

The 415 series are SWR meters (standing wave ratio) designed for use with square-law detectors to determine SWR and attenuation. Also used with bolometers (and if missing makes it worth much less)
To see how they are used -- see URL for a typical test setup
http://www.valcom-ottawa.com/Guelph/products/pdfdownloads/as3226%20manual.pdf

The 415E models are in the HP 1981 catalog. So the B models probably go back to the 60's

Hughes is a large aerospace company and this was probably used in their labs or production areas -- not aircraft.

You can E-Bay it but you need to know if it is working or just list as is.

I have just come into possession of a Model 415B Standing Wave Indicator made by Hewlett-Packard Co. in Palo Alto, Ca. It has a low serial number and was used by the US Army Signal Corps. It has a combination old ID tag on it with the Signal Corp. and Hugh Aircraft Co. There is also an old tag glued on that has USA 05. It looks to be in good shape from the outside. The finish is the old grayish brown that is metalized. The fuse is missing out of the back so can not plug it in and see if the tubes light up. The meter on the front is about 3x4 inches with Hewlett hp Packard on it and also square law detector. The ranges are for SWR, Expanded SWR, DB, and expanded DB. It has a 1/4" female plug for BOLO. Current. There is a three position switch. One for BOLO/200ohm, one for CRYSTAL/200ohm and one for CRYSTAL200Kohm. It has a wire flipdown bail in the front for tilting and has a leather handle on the top for carrying.

Does anyone have any history on this type of equipment? What and where it would have been used for? I'm guessing it was used on aircraft from the old Hughs ID sticker. I'm guessing it's from sometime in the 50's, maybe earlier. Would it still be good for anything today or

use to anyone?

From: David Hollander <n7rk@cox.net>
Message-ID: <3E174571.B16AB532@cox.net>
Source record: 35534

My primary area in collecting boatanchors is pre-war receivers of which Howard was a player. After finding virtually nothing on this topic on-line, I thought a web page would be appropriate on this obscure subject. I just completed a web page on the Howard Communications receivers of the 1930s and early 1940s using materials from my own Howards and what I have been able to find over the past couple of years. Although this may not be totally related to the list you are receiving it on, it is boatanchor material and some of you may have a Howard receiver.

Any comments, suggestions or additional material would be much appreciated.

I also have a page on Breting receivers which I just updated with a few new photos.

You can reach these pages through my main web page which can be found at:

## 116. Ten Tec Argosy Station for Trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-04 22:56:11 UTC
From: ekugrad@mindspring.com
Message-ID: <3e17662e.155817094@news.mindspring.com>
Source record: 35538
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have the following for trade:

Very nice Ten Tec Argosy analog with the following options installed:
500Hz CW filter, 1.8 kHz SSB filter, Audio CW filter, Noise Blanker,
Calibrator. Also have a Ten Tec Model 280 heavy duty metered power
supply, original manual, and original sales flyer.

Radio looks great and works great. Runs 5 or 50 watts switchable from
the back of the rig. Nice small package.

Interested in trading for an Ameritron AL-811 or 811H (with or without
tubes). Collins or Drake HF Gear. Interested in just about any type
if vintage gear. What have you got?

I'm located near Raleigh, NC.

Thanks and 73

David, W4IDX

HP test and measurement Company is now Aligent Technologies -- but HP built thousands of these units -- used by design labs, calibration labs and production testing as well as other areas. They were high end laboratory test equipment for industry. So lots of them out there and not a collectable or of any great value.

Example: There is a 415E model at E-Bay -- currently $25 with no takers -- so not particularly of value. New the 415E sold for $1050.00

The 415 series are SWR meters (standing wave ratio) designed for use with square-law detectors to determine SWR and attenuation. Also used with bolometers (and if missing makes it worth much less)
To see how they are used -- see URL for a typical test setup
http://www.valcom-ottawa.com/Guelph/products/pdfdownloads/as3226%20manual.pdf

I found it interesting that the above specification document was written in 1998, and revised in late 2001; yet the test equipment called out includes GR 12xx series stuff, and an HP-608E and the HP-415. My sympathies to those Guelph lab rats; they're working in a boatanchor museum.

Ed

Simple solution for you... don't go to auctions, or eBay to buy things that you need.

My friend something is worth what someone is willing to pay for it. It's just that simple.

Hi to the list
Anyone out here got an old Heath AT-1 they might be parting out? I need the meter switch, and can also use the front panel.
Thanks ahead of time for the response
Mike

Does anyone have a HP 200 AB or CD oscilator they are parting out?
I need the coupler that goes between the dial and the tuning capacitor.
Its a plastic disk, with ears on both sides, and some metal fingers that
grab the
ears.
Also, I need a a 12DW7 or 7247 tube.
TIA,
Dan Stanger

## 137. Re: F S QRP transmittrer 1 WATT

Newsgroup: rec.radio.amateur.boatanchors

Source record: 35460

Sorry Johnny,
I didn't mean to start a riot on here. I realize that the price is good, but as one other ham said, I just was curious as to whether both were on the same band. The case/knobs thing is not that important since as Ramsey states, you can use a VHS storage box for the case and knobs are cheap at RS. If I was being picky or greedy, I could have ask if the transmitter a crystal/crystals, or if the final was burned (a common problem with Ramsey TX), or countless other questions. I was serious about buying and most people want to know what they are buying.....

As for the other guys that flamed me, whatever turns your crank....

I have a VHF Engineering repeater in pieces that I want to restore as a personal project.

I think it's a RPT-144, but there is nothing stamped on the front of it, so I'm not entirely sure what band it's for.

Anybody know where I might find manuals and/or schematics for this?

TIA

## 141. COIL STOCK WANTED

Maybe, but I see current-production items on Ebay going for higher than
list price, for beat-up used ones.

I won't go to auctions that are populated by bidders who don't know the
value of what they are bidding on, because the end result is usually very
inflated prices. And Ebay has an awful lot of ignorant bidders.

My first transistor was a Raytheon little blue plastic CK-722 with a red dot on the case near the emitter wire. I found one in a friend's junk box and confiscated it for old times sake. It STILL has an Hfe of 80 and Icbo is way within specs for the point contact Ge device all these many years later.

Looking at it, though, you can understand why technicians of the day called it "a three-legged fuse"....(c;

You see what may be worth something in one region may be worth something
else in another region. Travelers will know that.

So don't bid on auctions. Some people just like the sport and really aren't
in it to save money. Its sort of like hunting. More often than not hunters
aren't out to kill the animal because they are hungry.

Can you say, to each his own?
Sure, I knew you could.

## 156. Re: FA: For Those Interested in the Advent of Transistors

To the best of my knowledge, the CK-722 was junction transistor, not point-contact. Indeed, by the time the CK-722 appeared, point-contacts were obsolete for new designs.

Can anyone confirm or deny this?

I remember building a radio using a single CK-722.

I think so. I think the tuner electronics are basically looking for a
ratio so they can zero out the reflected current. So if you get the
thing in the general ballpark you should be okay.

I am in need of a tone board for a Kenwood TS 711, two meter transceiver.
If you have one and would like to part with it, contact me via email and we
can make arrangements. I tried to get the rig fixed and was told by AES and
Kenwood Tech Support, those tone boards, which were optional at the time,
are no longer available..If anyone knows of a service source, let me know...

I appreciate any help I can get on this issue.

73 and Happy New Year.

Thomas Gaines K5TG

TR4CW, no power supply, no noise blanker. Cabinet has been painted and looks good but not perfect. Front panel good. Receiver works well but transmitter output low (75 watts on 80 and 25 watts on 10 meters). Lower sideband pilot light is out. Serial number 43xxx, price $210 plus shipping from Long Island

> --scott

Thats a common lament. If you have such items like you are referring to
and are willing to offer them here for 'current production prices', or
even a link to where one can find said items at such prices, that would
be welcome.
I've often paid more on ebay than "current production prices" because
the "current production" company may have a $50 minimum order and paying
$5 for a $3 part gets me around that. And if I can buy it now rather
than waiting for Springtime and hoping to find one at a Swapmeet for
$2.50+gas+motel, 5 bucks is a bargain.
Instead of simply dissing everybody as ignorant, post your items. If
you don't have them, well....

I must relate my RECENT experiences in finding crystals.
A while back I posted here looking for a certain range of 80m freqs and
got email offers like $25/whack for what I didn't want. The one
exception was a fine gentleman in PA who sent me a few 40 meter xtals
gratis and I'll surely fit them into my plans.
At the end of the search, JAN does these things for $11/whack so you
need not have to endlessly deal with dead web links and opportunists
unless you like doing that for fun.
My person at JAN was
sueb@jancrystals.com

I don't know what you'd need a third FET for. A dual-gate MOSFET is
essentially just two MOSFETs in series, a FET cascode IC.

> Can anyone confirm or deny this?

It was a junction transistor. Point contact transistors really did not
last all that long in the timeline of transistor technology..

I have never understood why most explanations of transistor action used the
point contact devices for examples - and then gave the operating
characteristics of junction transistors.
Point contact transistors are really four layer devices with their "hook"
collector. A few early circuits made use of the latch-up properties of
these devices, but because they could not be manufactured reproducibly,
these designs were quickly abandoned.

Besides the point contact transistor, some other popular devices have
reached the almost extinct status: tunnel diodes, diacs, tetrode
transistors (lateral base contacts), and dual-gate mosfets. Some of these
are still being made - if you know where to look.

Fred

The Bay is making their links to an item extra long.
This forces many people to "cut-n-paste" if they want to see your item.
Here's a typical link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4720&item=765432103&r
d=1

Some of the material in this link is not needed.
If you will simply add your item number to the end of this link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=

It will work fine and be "clickable."

If this person was offering "new" crystals - the price may have been
"reasonable" ONLY because:
As an example, the place "I" order from has increased their prices and will
not accept less than a minimum order amount. IF you only need one crystal,
it "will" cost you. How quickly you want it, adds to the cost. Others may
have raised their prices and order limits as well...I'm not including Jan or
ICM here. Perhaps too, the responders are in an electronics business and
were offering to special order to provide a service. I personally have
replied to some looking for crystals - offering to get the crystals as a
service of my business. I usually include Jan's name and tell them my cost
to look at as a "last" resort. OR perhaps they even worked for one of those
crystal firms. If those were USED crystals for $25 a whack, then that was
ridiculous.....I don't like paying or charging more than a fair price for
crystals.. In the end though, if you want it bad enough, you're liable to
pay more than normal...I've done it, most everyone has.. But I suggest
everyone to shop around first. Buying "used" crystals may be a waste and
more costly than a new one even at $25 up front. At least the new ones

usually come with a warranty. It isn't rocket science.. It's all in how bad you need it including time, how much you're willing to pay, who is providing the service and any warranty coming with that price. Just my 2 cents.

The absolute best stuff to sell is low end pro audio gear, or car audio gear. I have a couple friends who buy gear wholesale, then sell it as used on ebay because they can get a more substantial markup than they can selling conventionally.

>I've often paid more on ebay than "current production prices" because

That's true. I don't normally see this but it's a good point.

>Instead of simply dissing everybody as ignorant, post your items. If
>you don't have them, well....

Take a look at past auctions for the Alesis compressors, for instance. That's a really fascinating one to watch. The Alesis 3630 regularly will sell for retail cost, used on Ebay, if the description is written properly.

Personally, the most hilarious auction I have seen has been the Shure Level-Loc box selling for $450, but that was soon after an article in Mix Magazine in which it was mentioned in passing as having been used on guitar tracks on some Steve Miller album, and that almost certainly inflated the price. I still see 'em for $20 at hamfests, though. After that $450 high, the Ebay prices seem to have dropped considerably, though.

It's really fascinating to watch price trends on Ebay and try to figure out what causes the individual spikes and dips.

>Anyone know any details about this?

Depends on the circuit. That might have too much gate capacitance to
use in an RF mixer stage, but it might be fine in a control circuit.

I do have a small box of dual-gate types around here somewhere if there
is a great need for them.

Coincidentally, I had the December 1953 issue of QST handy, and I knew
it had an article about transistors; no it's not the infamous one
that said transistors could never amount to anything. It is written
by an RCA engineer, Richard Clay.

"Transistors have been available for quite some time", the article
begins, which is interesting because the discovery was only in December of
1947, and they already had time to get them into production. He laments
that there has been no standardization (but it was so early) and
"to avoid showing any preference toward any manufacturer the following
circuits are given without reference to a particular transistor".

"There are two types of transistors. The so-called 'point-contact'
type is made of a single crystal of n-type germanium. An electrode
called the 'base' is attached to one face and two closely spaced
contacts are made on the other face. These are called the 'emitter'
and 'collector'.

"The 'junction' transistor is formed of three layers of two types of
germanium. These may be arranged as n-p-n or p-n-p. The n-p-n is
the more common. In this type of transistor there are also three types
of connections. The base connection is made to the middle layer and
the emitter and collector connections are made to the outer layers.

"The junction type has higher power dissipation, lower noise, and
a cut-off frequency from 100KC to 1Mc. The point-contact type
has has higher current gain and a cut-off frequency from 1Mc
to 10Mc. Certain types of transistors have been made to oscillate
at frequencies up to 300Mc."

And then the article goes on to show various simple amplifiers and
oscillators, in that style of schematic that looks like early transistor.

I looked through the ads in the issue and can see no sign of transistors for sale. I've read this article before, but can't say I really paid attention to the fact that it was only 6 years after the transistor was discovered. Just last month I was looking at some 1947 QSTs, and for the first time I noticed a Sylvania ad for the 1N34.

Looking for something else last month, I found this page, http://www.jmargolin.com/history/trans.htm which lists various patents that show the almost fifty year road to the transistor. The patent numbers are significant, because one can see the actual patents online at the US patent office website at http://www.uspto.gov

I haven't actually looked at the patents, but the article mentions that what seems to be the junction transistor patent was filed in September 1951, and issued in December 1952.

Michael

This is an urban legend that Bell Labs encouraged at one time, because they wanted to play up the importance of basic research. To wit -- the transistor was "discovered" when their scientists were doing research on the surface properties of semiconductor materials -- research that had no practical use at the time.

This is simply not true. The transistor was a deliberate invention. Bell Labs was looking for a solid-state replacement for vacuum tubes and systematically went about finding it.

It's worth noting that at least two inventors claim to have invented the field-effect transistor at least a decade earlier.

Hi there.
I'm doing this project for school that involves a complete mathematical analysis of this receiver that I built. The detector (it's a regenerative design) uses a grid-leak method on a 6GH8A pentode.
Let me hasten to say that I'm not asking you for all that! I've got it almost done (I hope) except I need a model for the control grid current. It's a function of Vg and Vp, I beleive. And no, I'm not using SPICE- I find the tailoring of all those fitting parameters more confusing than applying Kirchoff ad finitum to the circuit.
Thank you very much for your time.

Sincerely,
Ross

Source record: 35418

I've got an old (um, duh) RBC-2 (I think)
RCA Navy receiver and power supply.

They're not in great shape. Well, the power
supply seems to work alright, but I (as a
kid) scraped up the receiver's front panel
pretty well trying to "clean" it.

I've also got the multi-wire cable that
goes from PS to the receiver - though I
think it's lost some sort of cladding since
it is just wires between two big plugs.

The receiver seems to work - I can tune in
a few random stations here and there.

Is this setup worth anything? If so, what's
the best market to sell this. (Consider that
I really don't want to ship this beast...)

Thanks!

- Rich Taylor, Atlanta, GA

I have a lot of working AN-3349/GRG-106 2 of these but the meters were scavenged. The units do work to specs you need the meters. 2 4cx350a tubes in them.
2 RT834s/GRC106s with out the meter again but working properly.

1 complete and in great condition AN3349 with proper meters Ready to do 400 watts with your exciter.

Make me a offer for any or all of the above plus shipping
Or will trade some for a HF rigs, HF amps.

Can meet to save shipping stuff is heavy! But can ship ups at your cost. I live in the N. Nevada area will so if your within oh 2 hour drive we can do bizz. for a meeting.

It's been a long long time <1957> since my vacuum tube days but let me meander a bit. Grid Leak established the dc operating point for a Class A amplifier. The grid leak resistor has a distributed capacitor, leakage and circuit stray capacitance, to chassis and to the plate circuit. In the tube there are a series of interelectrode capacitors. The Suppressor grid is generally grounded to chassis to minimize electron backscatter and to break up the Cp to Cg. The screen grid is heavily bypassed. Regeneration is achieved by introducing feedback, variable capacitor or adjusting tube gain, from the plate to the grid with a phase angle between 145 and 225 degrees and a feedback factor very close to but less than unity at the operating frequency.

So, I would begin my model by using a dependent voltage source, % of tube output, with a variable gain, setting loop gain, [forward gain of the amplifier times the feedback factor] [ratio of capacitors, plate to grid leakage], to slightly less than 1, and have a phase shift of 180 degrees nominally with a variance of +/- 45 degrees.

Test the model until the circuit just breaks in oscillation then back off on the feedback a percent or two.

Let me know how it works out.

I think you may need to include the "uramp" in a general voltage
controlled current source. The electron only come out the control grid
and never go in. I think the grid current actually follows something like
an exp() curve near the zero bias point.

Treat the pentode control grid as the plate of a diode detector without any loss of precision.

Essentially, the average DC grid current is equal to the peak value of the RF signal voltage divided by the high-value grid leak resistor. The grid current, of course, flows only on the peaks of the grid sinewave form. Grid current has an operating angle given by -

Theta = 2*InverseCosine( Ea / E )

where E is the peak value of the RF input signal and Ea is the DC voltage across the grid resistor. The difference between Ea and E is very small. But for your purposes Theta can be ignored.

The internal diode resistance, when conducting, can be assumed to be a linear resistance of a few hundred ohms. For normal detector operation it is necessary only that the grid leak resistor be very much greater than the internal diode resistance.

The grid (the diode plate) voltage is then amplified by the pentode in the normal manner, with the mean DC component varying according to the audio modulation. The pentode anode must be decoupled for RF otherwise the RF component is fed into the following audio stages. (A junction transistor works in exactly the same way except that the base must be forward biased by a few tenths of a volt.)

**********

A complete analysis (but it's not very complicated) can be found in "Communication Engineering", W.L.Everitt, E.E. Ph.D, 1937, McGraw-Hill Book Company Inc.

This is an old book but should be available in many university technical libraries. It is still the best book on mathematical treatment of vacuum tube circuits in radio receivers and transmitters. Go to the chapter on Vacuum Tube Detectors. I thoroughly recommend it.

None of the following programs deal with detectors but you may find some of then useful with your studies.

Can some one out there tell me what the pin-out or base diagram is for
an NT-85 transistor in a TO-92 package. Viewed from the bottom.
Thanks and 73 de Fred.

## 209. Re: Quaker Oats Antenna

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-08 03:31:34 UTC
From: Brooke Clarke <brooke@pacific.net>
Message-ID: <3E1B9B96.551F9F37@pacific.net>
Source record: 35432

Hi Jim:

You don't want to make the coil self reasonate becasue then the Q will become 1.

Better to wind a coil on the Quaker Oats box with about 1 wire diameter spacing between each turn.
Find a external cap (fixed and large plate variable) that will cause it to reasonate where you want to listen.
Now you have a loop antenna that will work reasonable well.

73,

OK, that seems to set the send format, but does it also leave the link
in one piece when reading it again? For instance, does this link show up
as one line? (I don't use OE, so can't check it myself):

<http://search.ebay.com/search/search.dll?cgiurl=http%3A%2F%2Fcgi.ebay.com%2Fws%2F&krd=1&from=R8&MfcISAPICommand=GetResult&ht=1&SortProperty=MetaEndSort&query=zenith+radio>

Yes. And I see that you're using OE6, so you obviously received it ok.

What's weird, though, is that it's all broken up again in the quoted
portion of your reply, as you can see below.

::sigh:: Ya can't win for losin' sometimes.

Cheers,
Fred

## 213. Trade: Icom IC-AT100 tuner for old HF rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-08 04:04:44 UTC
From: "abel5228@bellsouth.net" <w4udx@nospamjuno.com>

Source record: 35436
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hello to all on the group. I would like to trade (even) a real nice working Icom IC-AT100 HF automatic antenna tuner for an old HF transceiver. This tuner includes the manual, power cord and cable to connect it toIcom's older HF radios (IC-701, 720, 720A). The radio to tuner cable has a few wires that have come off the pins and need resoldering (easy fix). This is a first generation auto-tuner, it does not have memories but rather uses manual presets. I would like to trade it for an older working HF transceiver, Here's a list of radios I would be interested in:

Tempo One + PS
Kenwood TS-520, 820
Yaesu FT-101(xx), FT-401B, FT-7 or 7B
Tempo 2020
Heathkit SB-101, 102 + PS
Atlas 210X + PS
Ten-Tec Triton 4 + PS
or what do you have?

The radio needs to work properly or be an eaasy, cheap fix and include a manual. Cosmetics are not terribly important but would prefer front panel to be in good shape.

email me at w4udx@juno.com

Thanks,
Mark W4UDX

I read in sci.electronics.design that Ross <rjtucke@asu.edu> wrote (in
<rjtucke-43C82B.13530607012003@news.west.cox.net>) about 'NEED ADVICE:
Vacuum tube grid current?', on Tue, 7 Jan 2003:
>I'm doing this project for school that involves a complete mathematical
>analysis of this receiver that I built. The detector (it's a
>regenerative design) uses a grid-leak method on a 6GH8A pentode.
>Let me hasten to say that I'm not asking you for all that! I've got it
>almost done (I hope) except I need a model for the control grid current.
>It's a function of Vg and Vp, I beleive. And no, I'm not using SPICE- I
>find the tailoring of all those fitting parameters more confusing than
>applying Kirchoff ad finitum to the circuit.
>Thank you very much for your time.

The source for arcane lore on vacuum tubes is 'Radio(tron)* Designer's
Handbook, F Langford Smith. The 1998 reprinted edition is ISBN 0 7506
3635 1.

* (tron) was included for the original Australian and the US editions.

Chapter 2, section 8 probably has everything you need, and then some.
You may need to dig around to find if the 6GH8A is similar to one of the
older types for which data is given in the examples.

Source record: 35366

Johnson Valiant II AM transmitter. It came from an estate and has only been checked to make sure it isn't dead (it does light up okay). No way to check it out further here. Front panel looks nice but around the outside edges there are some paint chips. No modifications and appears all original. Includes manual, $325.

## 224. FS: ART-13 oscillator plugin

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-08 16:18:36 UTC

Jim,

Metallized polyester caps are fine. They are available from many sources on the web.

My first amateur radio station consisted of a command set and a homemade transmitter using a 5Y3 and 6V6. Of course that was back in 1954 when the capacitors in the set were only about 10 years old. :-)

Those will be fine to replace paper bypass types. They have better high
frequency performance and a little bit less drift, and they don't go bang
like the paper caps do. They are pretty inductive but so are the paper
caps you're replacing.

As a link it works but takes up 2 lines, not one giant line.

## 232. Ex-German communication receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-08 23:45:37 UTC
From: la8ak.xnd@online.no
Message-ID: <3e1cb5b1.93312833@news.online.no>
Source record: 35350

Have collected some information for German communications receivers
and wish to publish it on http://www.laud.no/la6nca/radio/german/ or
my own site. If somebody has comments or additions I'll be pleased to
hear from you

The data is written as word97 file and html formate would be more
suitable, but is shown here as text-format

More data for Ex-German Radio-Communication Receivers [LA8AK 20030105]

CR101 (Philips).

EF8 1.RF amplifier
EF9 1.RF amplifier
ECH3 Mixer and L.O.
EBF2 1st. IF
EBF2 2nd IF and AGC detector
EBF2 Detector and audio
EBF2 BFO
EM4 Indicator
Selenium bridge for noise limiter
Type 1918 heater regulator
Type 13202X Neon for RF input protection
150C1 150V stabilizer
8091D00 Dial lamps
AZ1 two-way rectifier

Xtal filter (750kHz)

Ranges:
1) 30-18MHz, 2) 18-11MHz,, 3) 11-6,6MHz, 4) 6,6-4MHz, 5)
4,0-2,4MHz, 6) 2,4-1,5MHz

Audio output impedance: 2500 ohm
Image rejection: Band 1) >40dB, 2) >64dB, 3) >76dB, 4) >90dB, 5)
>92dB, 6) >92dB.
Weight: 28kg
Measures: Width= 483 * Height 310 * Debth= 370mm
Mains operated.
--- -----
E52a, E52b 'K&#65533;ln' = T8K44
Ranges:
1480-3020kHz (White)
2980-6040 (Red)
5975-10050 (Yel)
9950-17700 (Blue)

17600-25200kHz (Grn)
10x RV12P2000, 2x RG12D60, STV140/60, Urfa 610, 2x OB120/4 (dial lamps).
Circuit: RF, RF, MIX, LO, IF, IF, IF, Det/Audio, Audio output, BFO
IF= 1MHz, has xtal filter, bandwidth 0.2-5kHz continously variable

Sensitivity: To obtain an output voltage of 5V on headphones (4k ohm) with 30% noise voltage are with the following modes and ranges the following RF voltage is needed.
Ranges I II III IV
V
Frequency 1,6-2,9 3,2-5,8 6,5-9,7 10,6-17,0 18,6-24,2MHz
A1 narrow 0,5�V 0,5�V 0,5�V 0,5�V 0,5�V
A3 narrow *) 5�V 6-5�V 6-3�V 7-5�V 7-14�V
A3 wide **) 3�V 3�V 3�V 4-3�V 5-4�V
*) 400Hz antenna, **) 400Hz cable

Image rejection:
25MHz: 86dB, 19MHz: 94dB. For the ranges I...IV the figures are even better.

Selectivity:
Selectivity control Wide (5kHz) Narrow (200Hz)
Offset frequency +5.25 +12 +15 +0.2 +1 +2
Attenuation: 3dB 40dB 60dB 3dB 40dB 60dB

Audio output impedance: 4000 ohm
Measures: 245H x 446W x 350mm Deep
Weight: 40.8kg.
Power: 110V, 155V, 190V, 210V, 220V or 230V AC 50W, 12V (11-14.5V) DC 75W

Further information: Telefunken-Zeitung Heft 90, M�rz 1951:
Kurzwellenempf�nger
Funkschau 1979, Heft 1, Nachrichtentecknik; Abgleich eines regelbaren Doppelquarzfilters
Radio och Television Nr. 8 1980 pp17; Tysk 40-tals radioklenod.
Siemens & Halske: Seitenband-Ausw�hlger�t EB1/3a 9Funk �str 144K1 (Independent Sideband)
Anlagen-Kennblatt Nr. A203 �berlagerungsempf�nger T8K44 (K�ln) - Krigesmarine

---- ----------
E381S (Telefunken), original version is E381H.
14.6-45.5, 41.7-136.4, 122.9-411, 366-1250, 1160-4290kHz, 3.48-6.1, 4.8-8.35, 6.6-11, 8.95-16, 14-20MHz
Valves: RES094 (RF), 3x RE084 (Detector, audio and audio output stages)
Audio output impedance: 4000 ohm.
Sensitivity: 0.5-50�V 1V audio voltage into 4000 ohm for A1. For A3 (30% modulation): 1.5-90�V.

Supply voltages: +4V 0,35A, +100V 20mA, -1.5V, -3V.
Marine version has emergency crystal detector, while airforce type has
an extra notch filter
------- ----
EZ6 (FuG10 P) Zielflug Empf�nger (Homing receiver)
Frequency ranges: 150-300, 300-600, 600-1200kHz
IF: 130kHz , xtal filter. Bandwidth 400-2.4kHz (later version has not
variable selectivity?).
Valves: 9x RV12P2000 + STV100/25(?)
Power requirement: 28V 0.6A. Dynamotor: U11, U11a
---- ----------

Fu.H.E.c Funkhorchempf�nger-c (Monitoring receiver)
Circuit: 10x RV2P800 as
RF, RF, MIX, OSC, IF, IF, IF, Audion detector, Audio output, BFO/CAL.
2x Sirutor 5b as AGC rectifier.
IF= 1875kHz, single xtal-filter. Xtal controlled BFO:
1874.1/1875.9kHz.

Ranges: 1. (White) 3.53-5.94MHz, 2. (Red) 5.77-9.68, 3. (Yel)
9.40-15.80, 4. (Blu) 15.35-25.80MHz.
Power requirement: 2V 1.9A, 90V 20mA. Automatic bias from anode
current.
Converter for 12V operation EW.h.
Measures: 430H x 340W x 240D, Weight: 27kg
----- ----------

Fu.H.E.u (Monitoring receiver)
Ranges: 0.73-1.65, 1.65-3.5, 3.5-7.5, 7.5-16, 16-25MHz
IF: 470kHz. Calibrator xtal: 2000kHz
Circuit: 9x RV2P800 as RF, MIX, Local osc, IF1, IF2, Audion detector,
Audio, Calibrator, BFO.
Power: 2V 1.8A, 90V 20mA. Automatic bias from anode current.
Measures: 453H x 365W x 250D. Weight 22kg(?)
--- ------------
HMZL34 OKM [Philips] (see VO34) 4x EH2, 4x EBC3, EL2, Typ1461, 4687,
13202X, ZF=280kHz
VO34 [Philips] (Vliegtuig Ontvanger 34).5x EH2, 3x EBC3, EL2, Typ1461,
4687, 13202X, ZF=280kHz
Original receiver is VO34, a Dutch aircraft receiver which Germans
used under designation HMZL34. Systemized to use only 3 types of
valves, but unlike the Germans they chose a heptode instead of a
pentode.
It is few differences: Local osc valve EH2 is changed to EBC3, and
some changes in the heater circuit. Rather unique waggon where the
RF-coils are mounted, perhaps Philips'
version of HRO. Must be seen!

Mains operated.
------ ------ ------------
JO20K41 (RX only) - Wilhelm Johnsen A/S Kopenhagen, Denmark.

Range: 15kHz-24MHz.
IF= 460kHz??
EF8 1.RF
ECH3 MIX/Osz
EBF2 IF + detector
EBF2 detector and audio
EL2 Audio output
EF9 BFO
EM4 signal indicator
Audio output impedance 4000 ohms
Power requirement: 12V DC, 275V DC.
--------- ----- -------

KST (K&#65533;rting)
copy of National HRO using German valves
IF=468kHz, xtal filter.
Ranges:
1. 45-22MHz (special range)
2. 22-11MHz (normal)
3. 12-6MHz (normal )
4. 6-3MHz (normal)
5. 3-1.3MHz (special)
6. 1100-300kHz (special)
7. 400-185kHz (special)
Circuit: 1.RF EF13, 2.RF EF13, Mixer EF13, LO EF14, 1.IF EF11, 2.IF
EF11, Det/Audio EBF11,
Audio output EL11, BFO EF14, Rectifier AZ1.
Power requirement: 220V 70W.

--- --------
K.w.E.a - Kurzwellenempf&#65533;nger "Anton"

I 980-1610kHz (Wht)
II 1560-2550 (Red)
III 2470-4060 (Yel)
IV 3940-6395 (blu)
V 6205-10200 (grn)

Circuit: 11x RV2P800 as 2 RF amplifiers, mixer, 3 IF-amplifier, AGC IF
amplifier
and dry-diode AGC rectifier (2x Sirutor 5b), BFO/Calibrator
(250/250,9kHz
xtals), Audion detector, Audio amplifier. 2x TE30 RF protection.

One or two tuned circuits (selected by a switch) ahead of first RF
amplifier, two tuned circuits
between first and second RF amplifier, and one between 2nd RF and
mixer
plus one section for local oscillator. 3 double-tuned IF amplifier
LC-circuits for variable selectivity.
Reduced IF level to detector for CW (with BFO). Audio filter for

selectivity position 5-7(8). Position 7 and 8 have equal selectity,
but BFO frequency is 251,8kHz for position 8.
Meter for anode currents and supply voltage.

Antenna: 200...500pF capacitance
Sensitivity for 1V RMS output into 4000 ohm, single input circuit,
without AGC:
Telephony, range I-V: 3...5µV
Telegraphy range I-IV: 0,5-2µV, range V: 1...2µV

Selectivity:
bandwidth position offset signal signal attenuation
1) Telephony 4-12kHz 40dB (100:1)
2) Telephony 3-10kHz 40dB (100:1)
3) Telephony 3-9kHz 55dB (500:1)
4) Telephony 1,5-5kHz 55dB (500:1)
7) Telegraphy 1,8kHz 55dB (500:1)

Image rejection: At least 78dB (8000:1) @10MHz.

RF and AF gain controls are normally combined when AGC is on, but
possible to
choose separate gain controls as without AGC with internal selector
(switch).
RF gain is achieved by varying the gain on certain RF/IF valves with
variable
screen grid voltage, but it is not the same valves as have AGC
applied.
Audio output impedance: 4000 ohm.

Power supply: 2V accumulator and 90V anode battery (automatic bias
from anode current).or
Netzanschlussgerät NA6/NA6a.
Converter for 12V operation EW.d and WS(E)d.

Measures: Height 274mm, width 692mm, depth 346mm
Weight 42kg
Acessories; 2 headphones Dfh.a, 5 core cable w/connectors for supply
voltages

My favourite receiver. Unusual extra IF stage and voltage doubler for
AGC, and level matched IF level for CW (SSB). AGC performs very well
for SSB reception (provided BFO injection is increased).
Problem today: Backslash is a problem, particularly on the 40m band.
----

L.w.E.a. - Langwellenempfänger 'Anton'
I 72-128kHz (wht)
II 122-241kHz (Red)
III 230-430kHz (Yel)
IV 410-800kHz (Blu)
V 760-1525kHz (Grn)

Circuit (8x RV2P800 + 2x TE30):
RF, MIX, LOCAL-OSC, IF, IF, AUDION DET., AUDIO, BFO

The RX has no AGC and combined RF/Audio gain control.
IF=60,9 kHz. BFO: 60kHz xtal and 61,8kHz tuned circuit.

Audio output impedance: 4000 ohm.

Power supply: 2V accumulator and 90V anode battery (automatic bias
from anode current).or
Netzanschlussger&#65533;t NA6, NA6a or A G 2/100.
Converter for 12V operation EUd, EW.d and WS(E)d.

Measures: Height 274mm, width 692mm, depth 346mm, weight 42kg
Acessories; 2 headphones Dfh.a, 5 core cable w/connectors for supply
voltages

This receiver looks very much like KwEa, and has many similar
functions and selectivity. My receiver worked fine after 40 years out
of service and it had been stored away for years in a house without
heating at Bergen Radio (LGN).
---- ----------
Lo6K39 (Lorenz)
Ranges: 1.45-2.2, 2.07-3.14, 2.96-4.46, 4.2-6.35, 5.97-9, 8.48-12.77,
12.030-18.13, 17.07-25.75MHz
Circuit: 6x RV12P2000, STV150/20, TE30, 12V 5W dial lamp.
1.RF, 2.RF, 3.RF, Audion-detector, Audio amplfier, Calibrator.
Measures: 438H x 500W x 320D (mm)
Mains operated.
---- ----------
Lo6L39 (Lorenz)
Ranges 74-111, 107-161, 156-235, 227-342, 330-497, 479-725, 697-1055,
1015-1530kHz
Power: 220V A.C 0.13A, 110V AC 0.26A
Valves: 6x RV12P2000, Stv 150/20, TE30, 12V 5W dial lamp
(Sofittenlampe)
Measures: 438Height x 500Width x 320mm deep, weight 65kg
Mains operated.
-------- ---------
Mw.E.c
Ranges: 830-1600, 1600-3000kHz
Circuit: 9x RV12P2000
1. RF amplifier, 2. Mixer, 3. LO, 4. IF, 5. IF, 6. Signal and AGC
detectors + audio amplifier, 7-8. push-pull output stage, 9. BFO
An earlier version has two RF amplifiers.
IF: 352kHz
DC power requirement: 12V 1.2A, 150V 30mA
Height 200mm, Width 313mm, Depth 180mm. Weight 13kg.
Dynamotor for 12V operation: EU.a, EU.a1, EU.a2, EU.a3, EU.a4
----- ---------- ---------
Radione R3

Frequency range: 2.5-25.7MHz
Sensitivity: 5-10 V A1, 1-2 V A3.
Circuit:
EF13 RF
ECH11 MIX/Osz.
EF12 IF
EBC11 Detector/audio
EBC11 BFO
EDD11 Audio output.
IF=460kHz
Operating voltages: 120, 150, 190 or 220V AC, or 6, 12, or 24V DC.
30W.
Measures: 24cm H x 35cm W x 17.5cm deep. Weight 11kg.
---- ---------
Torn E.b/24b-305
Frquency range: 96- 7095kHz
Circuit: 4x RV2P800 as RF, RF, Detector, Audio output (with audio
filter)
Power requirement: 2V 0.8A, 90V 10mA. Automatic bias from anode
current.
Power supplies. EW.b and WS(E)bfor 2V, EW.c, EW.c1 and WS(E)c/c1 for
12V.
----- ------- ----------
Torn.E. Spez445 Bs and 445b Bs
Range: 950-3050kHz
4x RE074: RF, Audion, Audio, Audio (Audio filter)
Supply: Anode voltage 90V, filament 3.8V, -3V bias voltage.
---- ----------- ---------
T8PL39 "Martin" (E491 N)
This is a DF receiver, in-spite of that what the front looks like, the
chassis looks very
much like Lw.E.a. and (Kw.E.a)
The circuit diagram is very much like Lw.E.a, but the valves are
RV12P2000.
It has a 4-section tuning capacitor. Two tuned circuits ahead of the
RF amplifier.

The receiver has the following stages:
RF-amplifier, Mixer, Local Osc., 1st and 2nd IF-amplifiers, Detector
and audio amp.
(diode/triode connected valve), BFO/CAL, Audio output. The
detector/audio amplifier
is very much like E52, but it is no AGC detector. It is two double
tuned IF
bandpassfilters for the selectivity.

Frequency ranges:
I 72,5-119kHz
II 119,0-196kHz
III 196-321kHz

IV 321-527kHz
V 527-860kHz

IF= 60,9kHz
BFO: 60/61,8kHz.
Valves: 8x RV12P2000
Stabilovolt STV75/15 II
Te30 (Osram)
Osram 3766, 6418 and 57.7130 lamps

Sensitivity:
BW Pos 1-5. emission A1A 1-5 V
BW pos.1 emission A2A 5-20 V
Selectivity (3dB bandwidth): 5 steps 300Hz...8kHz.
Band I 1kHz, Band II 1,2kHz, Band III 1,5kHz, Band IV 3kHz, Band V 3,5kHz.
IF rejection: Band I minimum 80dB =10E-6 (87kHz)
Image rejection: At 400kHz 10E-6, 200kHz 2*10E-6, 120kHz 4*10E-6

------- ---------------
T9K39 Main (Telefunken)
Ranges: 1.5-2.4, 2.4-3.8, 3.8-5.9, 5.9-8.7, 8.7-12.5, 12.5-16.4, 16.4-20.6, 20.6-25MHz
IF 730kHz, xtal filter
IF selectivity: 100-5000Hz variable
Sensitivity on 4615kHz: 0.5 V with lowest selectivity for 10dB S/N on A1A.
2 V for 5kHz bandwidth. on A1A for 10dB S/N.
6 V for A2A, A3 for 10dB S/N.
Circuit:
1.RF RV12P2001
2.RF RV12P2001
3.RF RV12P2001
MIX RV12P2000
LO RV12P2000
1.IF RV12P2001
2.IF RV12P2000
Diode det RV12P2000
Audio RV12P2000
BFO RV12P2000
STV100/25Z, TE30, 2x 6V 7.5W dial lamps
Antenna impedance 150 ohm balanced or unbalanced.
Blocking: Withstand 200V for normal reception when operating on 4615kHz.
Audio output: 10V for headphone (4000ohm) and 1V for Hellschreiber or audio amplifier.
Mains powered (75, 110, 150 or 220V V AC 50Hz, 100VA).
Ua=200V 50mA, Uh=12.6V 0,7A, grid voltage -18V.
Measures: 550W x 295H x 330mm deep.
Weight: 44kg

Further info: Anlagen-Kennblatt Nr. A202 ?berlagerungsempf?nger T9K39 (Main) - Kriegsmarine
---- ---------- -------
Ukw.E.e (see also Ukw.E.h). Matching transmitter is 10W.S.c
covers 27.2-33.2MHz
7x RV12P4000 (a rugged version of RV12P2000) as RF, MIX, LO, IF, IF, Diode, Audio output (intercom).
IF=3.0MHz , AM only.
"Gelbstrich"-ger?te (=Yellow marked equipment): Modification for intercom.
Dynamotor for 12V operation: EU.a, EU.a1, EU.a2, EU.a3, EU.a4

------ ---------- --------
Spez. 801 (Gr.2/37) [Telefunken]
Frequency ranges:
1460-2250, 2080-3190, 2940-4450, 4230-6540, 6000-9240, 8450-13000, 11500-17650, 15000-23000kHz.
Circuit:
1.RF RENS1284 (indirect heated)
2.RF RES094 (direct heated)
MIX/OSC ACH1 Gr (indirect heated)
1.IF RES094
2.IF RES094
3.IF RES094
Detector/BFO ACH1 Gr.
Audio output RE134 (direct heated)
IF amplifier for AGC RES094
AGC detector (voltage doubler) Sirutor (dry diodes)

Sensitivity: 0.4-1?V for A1 and 1-10?V to achieve 4V audio output voltage with 4000 ohm load.
"Spulenrevolver".
Variable feedback in IF to improve selectivity (Q-multiplier).
Later version has RF-gain omitted and as such probably not suitable for SSB although it has "product-detector". AGC detector is early version of the type found in Kw.E.a
Audio outputs: 4000 ohm for headphones, and 600 ohm for telephone cable application.
Power requirement: 4V 1.5A (H1), 4V 2A (H2), 100V 15mA, 150V 25mA.
Grid voltages: -1.5, -7, -6V.
Power supply unit: EN401 R?.
-------- - - - - - - -
Note: Sirutor 5b and similar small-signal diodes found in different receivers (EZ-6, Fu.H.E.c, Kw.E.a etc) are usually defective measuring 1k in one direction and 5...10k in opposite. They need to be repaired mounting a 1N4148 or AA118 (1N34A) diode inside the tube, use silicon type for AGC circuits (KwEa and FuHEc) and for E52, germanium for EZ6..
Substitute valve for RE074: 1H4 (octal base) has equak data, but 1.4V filament

Substitute valve type to repair a RV2P800: 5678, CV2254, XFR2, DF60.
Reference book for power supplies: Zubeh�r f�r Wehrmachtsfunkger�te
(Reinhard Helsper).

That depends completely on which software you're using. Which software
does it work in?

If you use ceramics you can put them inside the cans in an attempt to keep
it looking original...
In the mid 50's I converted one to 10 meters...

Another book to look for is the one from the MIT/RadLab series which
deals with vacuum tube characteristics. My uncle showed me the
section he wrote, which happened to deal specifically with
electrometer tubes and characterization of the grid current for them,
so I know it's in there. Sorry I can't give a more exact reference.

Cheers,
Tom

All of them broken on Netscape 7.01 (aka Mozilla 1.0.2).

Have you tried the suggestion by Robert Mozeleski earlier in this thread?

Cheers,
Fred

Yes, but set at 100, the 101st character starts to wrap. The settings there only go as high as 132 characters. The link I just posted was near 175 characters long.

I've tried posting using larger "wrap" numbers, but never had any luck. When I post through Netscape 7.0, they work fine, but I prefer to use OE6 for my mail & news.

For long URLs, when posting through OE6 I've had to use www.tinyurl.com or www.makeashorterlink.com or www.shorterlink.com or other similar services.

Does anyone here know how to send long links through OE6? If not, I'll have to head over to the OE newsgroups and ask.

jim menning

## 247. FS:Mackay 3001a Marine Radio..tube and in excellent condition

I have a Mackay 3001a for sale if interested.
I inherited from a nautical expert and broadcast engineer for RCA.
It's in excellent condition, all tubes seem to work even the lamps
behind the frequency dial.
If interested, please drop me a line with your best offer
Thanks

I stand corrected, Jim. It -did- work in some previous version, but with all the improvements I guess they had to do away with that feature.

For Sale: One New Uniden BC200XLT handheld scanner with cell modification.

This unit was purchased in 1994. It has never been removed from the box.
It is still in its original packaging. It had been modified for full 800MHz
coverage before it was sold to me. All accessories included: antenna,
case, charger, battery, instructions, and earphone. I paid $185.00 for it.
I would like $160.00, but make me an offer if interested.
Please reply by email directly to me.

Thanks,
Gary

A Russian-American colleague of mine tells me that one of his mentors back
in the old Soviet Union observed enhanced reverse conduction and negative
resistance in hyper-abrupt semiconductor junctions in the early 1950's. He
couldn't figure out what was going on, so he went on to something else. He
was miffed a few years later when Esaki invented the tunnel diode.

To turn a phenomenon into engineering you almost always need good science.
Empiricism is not enough.

I've got to clean out the garage, serious offers considered.

Complete Marconi tube radio, one of the very early and fully operational

RCA BA 6B Limiting Amplifier great condition, all complete
Western Electric 1126C Level Governing Amplifier with original manual
RCA 44BX in as new condition with original manual
CBS Volumax III with original manual
RCA BA 23A Program Amplifier with original manual
Urei 1176 LN Silver as new
Urei 1176 LN "F", the very rare version, and most sought after by
studios.Superb condition
David Bogen Company Mid-Range Amplifier
Gates SA-39B Compressor Limiter with original manual
General Radio Distortion & Noise Meter Model 1932-a
MacKay Radio Marine Radio Receiver Type 3001a ,very old and neat!
Hickok Universal Crystal Controlled Signal Generator Model 288X
Ampex 351 Tube Pre-Amplifier and reel to reel with original manual
Heathkit Audio Generator
heathkit Audio Analyzer Model IM-22
2-Presto Recording Company Record Lathes Type 60 with amplifier
Precision Apparatus Series 85 Voltage Meter
Thruline Watt Meter Model 43
Taylor Model 110A Capacity & Resistance Bridge
Data Precision 2440
McMartin RF Amplifier TBM-2500
RCA Senior Voltohmyst..very neat!,very old
RCA Master VU Meter in rack
RCA Mounting Shelf Type BR-22c..very rare
Ballantine Laboratories Voltage Meter Very old
Gates Tube Modulation Monitor M-5693
Marconi ABIIC Studio Consolete..very nice condition with original manual

Rawson Electric Interments Voltmeter Type 518
General Radio Megohmeter 1861A
Stark Servicemaster Tube Tester Model 9-56
Stromberg Carlson Short-wave Radio in cabinet with turntable
General Radio Impedance Bridge Type 650a
Hearth Company Programmable Frequency Counter SM110-c
General Radio RF Bridge Type 916A
Starkit Tube Checker Model 9-99
RCA FM Signal Generator Model 202B
EICO Oscilloscope Model 460
RCA Beat Frequency Oscillator no154

HP Audio Oscillator 200AB
Heathkit Audio Generator Model 16-72
Heathkit RF Signal Generator
Electro Voltage Generator
Leed's & NorthrupCo ?
Heathkit FM Stereo Generator Model 16-37
Realistic Communications Receiver Model DX-161
The Davon Company-Transmission Set Type 11A..very old, very neat!!
Simpson 270 Voltage Meter
Old vintage tube LP/HP filter set
General Radio Company Bridge Oscillator Type `1330A
Pair Of Electro-Voice Sentry 11A speakers in cabinets
1-RCA Duo-Cone Loudspeaker Type LC-1a in RCA Floor housing Type -11415A
with original manuals

Many many tubes, large and small ones.
Many manuals for the above items , and other amplifiers
Some 20-30 old vintage meters, some still in boxes.
Old microphones, cannon connectors, etc, etc.
This is a short list but will give you an idea of the larger items. Any
questions please feel free to call
Thanks
Ken

## 258. Reciever identifying question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-09 15:13:49 UTC
From: Michael Graves <eyesh@here.com>
Message-ID: <3E1D91AD.1E2532E1@mindspring.com>
Source record: 35377

Hello, excuse my ignorance, I know nothing about ham radio. With that being said, years ago, my best friend's father, who was a ham operator, was clearing out alot of his old stuff and knowing I was an electronics obsessed pack-rat little kid told me I could take anything I wanted. Fast forward a few years to now, and I'm cleaning out alot of my accumulated junk and I've come across some of the old equipment of his and there is one piece in particular that intrigued me, it's big, green receiver, brand name National model number HRO-50T, with several big cartridge type things that load into a slot in the front, each cartridge has different frequency bands written on them.
I did a bit of searching on the internet and that led me here, and I was hoping someone could tell me exactly what this thing is, and any information they may have about it.
Thanks for any help, and putting up with my stupid questions.

## 259. >>TUBES AVAILABLE<<

TUBES AVAILABLE

I have a very good selection of tubes for HAM/CB/Audio/Antique/Transmitting
100,000+ NOS USA tubes in stock

I do not have a web site nor a formal price list ~~ Suggest that you Email me with the tubes that you need, along with the quantity
of each tube, and I will check my current inventory and get back to you with availability and a quote.

This is my only business, it is not a hobby, so I strive to supply quality tubes at a very competitive price.

I have very few of the 'high end' audio tubes, but do have a good selection of all others.

Specialize in sweep, transmitting and ceramic tubes.

Please Email you needs to:
thetubeman@earthlink.net

## 260. Re: Reciever identifying question

Source record: 35379

The National HRO-50T is a Single Conversion Superheterodyne Receiver - 14 tubes. T stands for table version as opposed to a rack mount. It was built over the years 1949 - 1950. It was primarily of interest to Amateur Radio buyers. The plug-in coils are to cover various bands.
New price was around $350, Collectable price $299 to $400 depending on condition.

From the book "Shortwave Receivers - Past And Present", by Fred Osterman.

You can obtain a manual for it by searching the Ham Manual vendors at URL:
http://ac6v.com/manuals.htm

So is mine. I knew an old man who sold used books at a flea market,
and when he found that I was interested in the older electronics books
he would put aside anything he found till I got a look at them. I
bought quite a few from him, but he died of cancer a few years ago, and
I haven't seen another good deal, other than Skolnik's RADAR book.

Just like your Grandfather or Dad had.......
MINT condition with all manuals, hang tags and original accessories,
except box. I have numerious scans I will send to prospective buyers.
Radio works great....except (don't you hate these) dial cord has broken,
easy fix, instructions in manual. Radio even has original dial light
battery (long dead) but no leakage. As pictures will tell radio is clean
inside , all tubes work fine, reception is very good with no bad filter
cap hum.

$125 + shipping from 83713 (Boise Idaho

Also I have a good parts unit, will all good tubes, antenna, cabinet and
various spare parts. (no picture) I will sell and ship for $45

I have an RCA Radiotron; if someone needs, i would be glad to scan up
to about a dozen pages at 200DPI in GIF (most compact) and send the set
of scans (PDF and ZIP makes it larger).
Any specified page or part (like a graph) i would be then glad to scan
at higher (specify) resolution.

I've heard this claim, but it has never been verified.

The other principal claim was by Dr. Oskar Heil. He presented in the context of story in which he talked a co-worker out of inventing the laser ("It has no practical use.") so I'm inclined to believe him. But he has no proof, either.

Here is a bunch of stuff for sale. Prices do not include shipping unless

specified.

Click on the links for pictures.

Parting out the following radios:

Hallicrafters SX-96
Hammarlund HQ-110
Swan 350

What do you need?

Collins Radio 200 mA meter and Collins Radio 25 mA meter
2 inch diameter and outside dimensions are 2.25 inches x 2.25 inches
Possibly from a KWS-1? Don't know as I'm not a Collins guy
Both are electrically good but the 25 mA has a cracked glass.....
$50 for the pair
http://members.cox.net/radiostuff9/collins200ma.jpg
http://members.cox.net/radiostuff9/collins25ma.jpg

RCA WV-97 VTVM with WR-69A test probe.....$30
Has a genuine RCA Laboratory decal on the top! Working but
needs calibration
http://members.cox.net/radiostuff9/rca_wv97a.jpg
http://members.cox.net/radiostuff9/rca_wv97a2.jpg
http://members.cox.net/radiostuff9/rca_wv97a3.jpg

Viking Mobile VFO Dial Scale.....$12
http://members.cox.net/radiostuff9/vikingvfo.jpg

Century In-Circuit Capacitor Checker with manual.....$35
A compact unit that works great. Requires a "cheater cord" type of power
cord
which I do not have an extra
http://members.cox.net/radiostuff9/capchecker.jpg
http://members.cox.net/radiostuff9/capchecker2.jpg
http://members.cox.net/radiostuff9/capchecker3.jpg

Allied Radio Knight Kit AM-FM Tuner .....$25
Works great!
http://members.cox.net/radiostuff9/knightamfmtuner.jpg
http://members.cox.net/radiostuff9/knightamfmtuner2.jpg

McMurdo Silver Model 900 VOMAX VTVM with manual copy (not
working).....$20

http://members.cox.net/radiostuff9/silver900.jpg

GenRad W50MBB Variac Autotransformer - appears new - $350
http://members.cox.net/radiostuff9/bigvariac.jpg
http://members.cox.net/radiostuff9/bigvariac2.jpg
http://members.cox.net/radiostuff9/bigvariac3.jpg

Philco Model 38-38 Wood AM/SW Radio from 1938 (battery radio - nice
shape but untested) - $85
http://members.cox.net/radiostuff9/philco3838.jpg
http://members.cox.net/radiostuff9/philco38382.jpg
http://members.cox.net/radiostuff9/philco38383.jpg

Superior Instruments Model 77 VTVM. (3 tube unit with a lighted scale.
Inside looks excellent but needs work) ..$20
http://members.cox.net/radiostuff9/superiormeter.jpg

CTS 15 Inch Speaker From Hammond Organ
Sounds great on my workbench receiver which is an SX-96! This would make

a beautiful speaker for a boatanchor receiver if you have an

## 274. VFO to BA - Out of ideas

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-10 00:55:32 UTC
From: Bill M <don'tspamme-exray@caribe.net>
Message-ID: <v1s6ar3k42lg3a@corp.supernews.com>
Source record: 35294

I have souped up an old CB VFO with the intention of driving my Harvey Wells TBS-50D. Actually it works pretty good except for one problem...the setup is dead as a stone on 40.
Here's how it is supposed to work...
VFO output is 3.5 Mc (Harvey calls for 3.5 fundamental from 80-15 meters). I have about 4 v p-p RF loaded out of the VFO. It plugs into the xtal slot on the xmtr. On 40 it is supposed to pass thru the 'osc' stage like it does on 80 and double in the next stage (buffer/multiplier) if I understand it correctly. I have the same RF level going into the buffer on 80 and 40, actually on all bands.
On the other bands like 15 and 20 there's no problem getting it to multiply up like its supposed to. And using a 3.5 xtal it works fine on 40. There is definitely more gas to work with when using the xtal but I'm miffed that the buffer/multiplier won't give more than a very faint output on 40 when it seems to drive just fine on the other bands. In fact, at one point in my scheme I had only 2 volts p-p from the VFO and everything ran as well as it does now.
Of course I've repeaked the buff/mult output coil and verified all the components, etc. Have tried connecting the VFO in both hi and lo-z configurations, both with coax and twinlead resulting in only minor differences in the rf voltage level. Have verified umpteen times that the VFO is really putting out at 3.5 and not some oddball freq.
The original Harvey Wells VFO uses a simple 6AG7 osc, no amp stage and I don't know how much output it might have had. Is it possible for my drive on 40 to be just below the threshhold of where the buffer stage will operate?
Any ideas?

TIA,
Bill WX4A

Run it with low B+ voltage and you don't have to replace them.
Assuming the set hasn't been molested up to now, put 28 volts
on both the fils and plates. Add and amplified speaker like on your
'puter
and away you go.

Hi Bill,

Are you sure that the oscillator stage is not doubling? They may
double in the oscillator stage
and double in the buffer too for 20 meters. For 15 they may double in
the oscillator and triple in
the buffer. If it is doubling in the oscillator and you are also
trying to double in the buffer on 40
meters that may be the problem. Check the oscillator and buffer coils
with a grid dip meter on
each band.

4 volts sounds a little low off the top of my head. Seems like 10
volts or more would be in the
range from a vfo??

Thanks for the reply, Gary.
As far as doubling in the osc stage I'm pretty sure that its not. The output circuit is strapped, using an RFC as the inductor, between 80 and 40. The other bands seem to use a combination of multiplying between the two stages.
No GDO here :-( but my point of reference is that it peaks perfectly using the proper xtal.
I tried to hunt down some 'typical' toob VFO specs and even a high-end one like an HG-10 Heathkit sez only about 5 volts. And here again, the original VFO that goes with the set is only a 6AG7 osc...no buffer or amp. Maybe it put out more than mine but I'm back to the "works on every other band" observation.
I just finished doing an experiment that provides a new clue. In this rig the drive pot controls the screen voltage of the buff/mult. The schematic has one end of that 25k pot at gnd but my rig had a 5k resistor to keep from going to that extreme. I guess that was a later factory mod to keep users from od'ing the drive. I jumpered it out and now get some usable power out of the xmtr but the drive pot 'peaks' on 40 meters with the VFO instead of being continuously variable as it is anywhere else.
After I got some power visible enough to deflect the wattmeter I notice there is a major difference between my twinlead interconnection and the coax lead....only on 40 m. So I'm convinced now that its a matching/resonance problem due to my kluging of the VFO output. I think

the next step is to make a proper 3.5 Mhz output circuit for the VFO instead of just tapping off the output transistor via a cap as I am doing now. Although this isn't affecting the measured VFO output, some black magic of resonances seems to be killing the drive on this band. In the meantime, I get 4-5 watts out as opposed to 15-20 elsewhere so I must be getting close :-))
In your opinion does any of this make sense and am I on the right track?

Tnx,
Bill WX4A

Looking for older signal generator for tube type SW and MW only receivers/ Must be fairly cheap, calibrated, and in good condition. Individual offers or information of where to obtain one. Looking for all opinions of which type/manufacture with which options/features to get. Age of generator not important, just the functionability and reliability.

thanks, John

Seriously, you can get a nice old sig gen for about 15-20 bux. Accurate calibration won't be part of the deal and most of these old guys are no more accurate than would be the dial in a radio of that vintage even after tweaking.
Fear not...if you have an auxiliary means of reading the frequency it will be fine otherwise. I use my Sony digital transistor radio to put mine on frequency.
Mine is a RCA WR-50B which admittedly cost me $27. Nice unit...small and it sweeps 455 and 10.7 IFs. I'd highly recommend this unit for general work.

| Yes, but "I" was new in '52 :)

IIRC I bought my copy in 1954 or 1955 at the age of 14 or 15, about
when I built my first Williamson (I think that's what the tube amp
with screen taps from the output transformer was called ??).

The Williamson ultralinear? It has been too many years for me too.
:)

I read in sci.electronics.design that Jim Thompson <Jim-
T@analog_innovations.com> wrote (in <c4st1v8nsdku08pckith5qgdhvjrenj11i@
4ax.com>) about 'NEED ADVICE: Vacuum tube grid current?', on Fri, 10 Jan
2003:
>IIRC I bought my copy in 1954 or 1955 at the age of 14 or 15, about
>when I built my first Williamson (I think that's what the tube amp
>with screen taps from the output transformer was called ??).

No, the Williamson was earlier and used KT66 pentodes connected as
triodes. Your amp, using the 'ultra-linear' screen feedback trick,
might have been the Mullard 5/20, the GEC 912 or the GEC 88-50, if it
was a British home-constructor design.

## 292. FS: ** Amperex PQ 7534 tubes **

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-10 20:49:35 UTC
From: ovrreactor@aol.com
Message-ID: <20030110154935.02022.00000134@mb-df.aol.com>
Source record: 35219

FS: ** Amperex PQ 7534 tubes **

I am selling four (4) Amperex PQ 7534 tubes. These have just been tested for emissions and leakage on a B&K 667 tube tester, and all test strong. They are used tubes, but show no physical sign of hard use. I don't have any equipment that uses these, so I can't verify that they will work in any specific application. I will warrant these tubes against DOA, and that they will test good on a similar tube tester, but otherwise the buyer accepts these tubes "as-is".

All 4 for $50, (shipping included for US).

If interested, please respond by email to < OvrReactor@aol.com >, do not post.

Regards,
Tom Mitchell

Thanks for the memories. From 6V6 to 6L6, then KT66, KT88, 6146, then the ultimate - 813:)

I really miss the warm glow of filaments on a cold winter's eve, and the clear signals on 40 meters when ice was on the windows:)

Mike

I stopped at KT88 and switched to silicon. Prior to that I had built
a 10W class-A amp using one of those door-knob Ge devices from Delco.

From: Bill Higdon <w.higdon@attbi.com>
Message-ID: <3E1F4565.9040408@attbi.com>
Source record: 35314

This reminds me of a story involving the Angry 6 (GRC-106), I worked in a TOC my first 6 months in Nam. We had a real problem with a dog chewing up the coax for our UHF radio. If it would have been any other radio no problem but the shorted coax would blow the UHF Final every time. So one morning after getting the radio working again, I ran the coax from the 106 in the the same place as the UHF was normally ran (after I pulled the UHX coax out of the way), and set the 106b for CW. Then everyone listening to the 106 until we knew the dog chewing on the coax. At that point our OIC (Officer In Charge) held down the key for 2 seconds. Next just about everyone ran outside to see the results. The dog was standing there with a strange look on its face. And then he took of running from there as fast as he could. After this the dog would go back in to the area where the antennas were, but he never chewed on the coax any more. And I never had to work on that UHF rig again. Oh yes the 106 wasn't damaged by this. But we did have a DUMB Captain blow out the final one day. But that's another story. In some ways I wouldn't mind a 106 but I don't know where I'd put it.

I remember those - a real pain to mount on a 1/8" aluminum heat sink. One hole for the mounting stud, then three for the leads. My holes usually got too big after moving them over to fit the pins:)

I was lucky. My father-in-law-to-be ran a machine shop. He machined
me the most beautiful heat sink you've ever seen ;-)

He also planed the head on my '53 Hudson Jet after I warped it by
over-heating the engine and blowing the head gasket. Made it pretty
speedy... I could get 100MPH out of it ;-)

I could only get about 90 or so in my Dad's '49 Ford Flathead, no matter how much I tweaked the carb screws.

I saw one recently in Fry's parking lot in Santa Clara. Could not figure out how my girlfriend and I could both fit in the back seat. Not sitting up. Well, you know what I mean:)

Mike

Now we're bringing back the remembrances... I had a '50 Nash where the
front seat folded down to make a near-full-size bed ;-)

And the vibrator-powered tube radio would run the battery down in less
than an hour, so you had to park on a hill (fortunately easy to find
in West Virginia).

In my senior year in high school I got a '53 Packard (straight 8),
that car would haul ass! My father sold it while I was at MIT... my
sister was too short to drive it :-(

==========
Roger:

The low-frequency coils (C,D, E,....) are interchangable between the
HRO-60 and HRO-50, but the high-frequency (A and B coils) are not.
The HRO-60 operates double conversion on the A and B coil ranges,
whereas the HRO-50 is single-conversion on all bands. If you can find
an "A" coil for the HRO-7 or older HRO, it will work in your HRO-50.
Unfortunately, the "A" coil from a HRO-60 won't work in your HRO-50

My high school chemistry teacher back in '69 told the class that there would be at least one Nobel-worthy discovery made in his class every year...but that nobody would recognize the significance of it; so it would pass unnoticed.

My high school chemistry teacher made some of the finest hooch back in
that enclosed ventilator I've ever had the pleasure of tasting. Once
hooked on a tiny taste, all he'd let us have, of his "special brew",
all chemistry students were so interested in the class, they forgot
the still perking away in the corner and learned more from this class
than all other classes combined. He was the finest teacher of any
year of students I ever met, including me. Many of his students went
on to careers in chemistry or physics, which he also taught. I
watched students totally disinterested in the droll rote memorization
that is the American High School stop their acting out and become so
enthralled with anything done in that classroom it turned their very
lives around.

Mr Dewey, a B-17 pilot from WW2 with many missions into harms way,
should have been preserved for cloning. God knows American Education
could sure use him, today.

Larry W4CSC and other fine old calls since 1957...

## 311. BC-230 anyone

Source record: 35334

Hi Bill:

I am going to get my schematic. I think the voltage may be too low. I have not found a schematic of the Harvey Wells vfo, but if it was capacitively coupled, it might be in the 50 volt range. I am assuming it would be driving a high impedance.

One check would be to put your scope or rf measuring probe on the crystal leads and see what kind of voltage the crystal is developing. If you do not have a rf probe, it is easy to build.

I love my old 50D. The audio quality is excellent, although it is not reputed to have such. The secret may be the phase inverter rather than the transformer driver on phone.

Got the UHF Anpassungszeiger und UHF-Wattmeter NAD BN26223/60.

Has somebody changed connectors from Dezifix to N-type, and changed
impedance from 60 to 50 ohm? Also have a 1kW probe for it

Have the books, is it some interest to post data to a particular site?

it is not for sale!!!!!

From: la8ak.xnd@online.no
Message-ID: <3e203ddb.76348076@news.online.no>
Source record: 35338

Hi

just planning a cw transmitter and have some thoughts about the construction. Believe most transmitters described before 1960 may require FT-243 xtals and are not particularly BCI/TVI proof, so it may be based on my own experiences.

Suggested circuit

6SJ7 ECO
6AG7 or 6V6 Buffer
807 PA

will use pi-filter, but selectivity isn't too good so one or two tuned circuits will be added for the intermediate stages

Do you have any ideas of similar or better rigs I could steal some ideas?

Also considering using controlled carrier modulation, do you know references (sites) where this tecnique is explained?

Message-ID: <3e204360.77761582@news.online.no>
Source record: 35339

Just heard it last June, very strong in this area 2-300miles away,
-60dBm from my active antenna. The Siemens D2006 Level meter had some
wrong pitch so I must use 2kHz BW, but later it was modified for 600Hz
pitch with 80Hz BW. The S/N improved from 6dB to over 30dB, it seems
to be some very bad noise source around 18kHz...

Yes, its capacitively coupled. That much, huh? No wonder.

I forget exactly what I was seeing at the xtal but it was way over 10 volts.

I did add an LC circuit to my output transistor and that helped a bit.
I'm measuring now a good 10 volts p-p out of the VFO and the grid
current meter actually moves a bit now on 40.
I think I have reached the end of the road with this solid-state VFO's
capability. Its driving the 50D easily up to about 18 watts out
everywhere but 40 where its about 10-11 watts which is enough for my
purposes. I'm only running about 300 volts B+ so all-in-all thats not
too shabby.

Thanks for your help.

-Bill WX4A/KP4

Wouldn't some of this be hinging on the type of oscillator in the transmitter?
Depending on the circuit, some can be fed with a VFO, while others require
a bit of work. I'm too lazy to look up a photo of the transmitter, but
unless it has a "crystal/vfo" switch, I'd be looking into this.

Also, old Handbooks would show various schemes for coupling a solid-state
VFO to a tube transmitter. Some sort of step-up transformer right at
the crystal socket, one I just glanced at was just a coil roughly

resonant at the frequency feeding the socket, with a few turns of wire around it to take the signal from the VFO.

## 325. FT-902DM interface for YR-901 and YK-901

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-11 23:38:30 UTC
From: Kevin_Ryder <Kevin_Ryder@email.msn.com>
Message-ID: <eJY5qrcuCHA.2148@cpimsnntpa03>
Source record: 35246

Howdy,

Is there any type of a modification for the FT-902DM to operate with a YR-901 (CW/RTTY Monitor) and YK-901 (Keyboard)?

This is the problem I am having.

1. I can hook my electronic iambic keyer directly to the FT-902DM and it will transmit Morse code.

2. If I hook it up into the YR-901, all I get when attempting to transmit CW is a dead key in CW. It is as if I am hitting the tune button.

In both case 1 and 2, I can hear the CW sidetone with distinguishable characters; however, what goes out on the air in case 2 is a dead key tone.

Any suggestions would be greatly appreciated?

Thank you in advance for any assistance.

KR

Hi..I am changing out some Sprague Metal body electrolytic caps.
On one end of the body the end is "indented" the circumference of the metal body. There is a "+" sign there.
I know that with modern caps the "arrow" points to the negative side.
On the Sprague caps, is the "+" the "positive" end?
I know sounds like a dumb question but I have never changed these out before. The caps are in a Collins 516F Power supply and a 32s-3 transmitter..Thanks..Jos

## 333. Hammarlund HX-50 help needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-12 01:49:19 UTC
From: Norm - WA3KEY <ndrech@fast.net>
Message-ID: <25i12vkpn2dcpjd4jjpoj3u1ns3n4uvsm3@4ax.com>
Source record: 35252

If anyone reading this post has a Hammarlund HX-50 transmitter and doesn't mind pulling it from its cabinet, I need some help identifying where a wire terminates. If just one end had been cut I could trace it with the schematic but BOTH ends have been disconnected.

The wire I'm trying to identify is red with a yellow stripe and terminates on one end near the PTT terminals of the rear terminal strip and near 12AT7 - V107 at the other end. I have a feeling it has something to do with relay control or VOX. My HX-50 keys up and transmits properly when keyed via MOX or PTT, but K102 stays semi-energized even when the OPERATION switch is returned to STANDBY. If K102 is opened manually it stays open (even if pushed closed manually) until keyed again. It's not a simple matter of the relay sticking. I suspect it may have something to do with the disconnected wire.

Any help would be sincerely appreciated. Please respond via e-mail to wa3key@fast.net.

## 335. Collins 516F and 33s-3 revisited

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-12 04:22:17 UTC
From: Jos <josuha@charter.net>
Message-ID: <v21rif1tiu2o6b@corp.supernews.com>
Source record: 35254

Hi Colin.
I just finished the recap of the Collins 516F supply, new electrolytics,
5R4, 5U4,
diode..
I jumpered the pins on the cable (on/off pins 5 and 7) so I could test
the supply without hooking up to the transmitter.
No arching or shorts..the tubes light up nicely. Hums right along..
Now...the guy who had the rig jumpered the "on" switch on the rig.
Apparently it was defective and he "jumpered it" so that it was always on.
When I got the rig and connected the power supply, it came on when you
plugged it in.
Now when the supply is connected to the transmitter it does not come on.
I know it sounds like a can of worms, but this rig has some issues that
were'nt addressed for a long time. Needs some TLC and want to get her going.
I did'nt do anything with the transmitter or changed
any wiring in the supply. It has me be baffled.
Could it be the switch just gave up the ghost entirely? Or does anyone
have
any ideas.
Apparently it is not being "switched on" from the transmitter. Like I
said, first it worked (sorta), then not at all now.
Thanks to all for their suggestions...Jos

In his physics class, we all learned, first hand, about Nuclear energy
by removing his WW2 Radium-dial flyer's watch from his wrist to see
the effects of 25 years of gamma radiation on the human wrist. His
skin was physically discolored under the metal back of the watch and
gradually got lighter as you went away from the intense radium source
away from where the watch sat. THAT was quite a teaching tool, too!

The school had a licensed Strontium 90 source for the physics class he
arranged with a old flying friend who was a scientist at AEC. It was
kept in the school vault in a big lead container. When doing nuclear
demonstrations with the Geiger counter to show the alpha, beta and
gamma effects, he had to put his watch into the lead container and
close the lid to shield the measurements from its gamma radiation
because that watch you could read a newspaper with in the dark put out
MORE radiation than the licensed Strontium 90 source!

Even the disinterested girls in the class forced to take physics in
their Junior Year paid great attention in HIS physics classes. There
was NEVER any droll rote memorization of stupid terms to pass a test,
as there was in much of the rest of the school that I simply
hated.....like History, English Lit, yecch....I can't go on or I'm
gonna puke! I often wonder if History had been taught without the
"You'll do this or else" mentality if I would have been more
interested. History Channel is one of my favorite entertainments, in
spite of the continuous spammercials every 8 minutes for Pasta Pots.

Most children are naturally curious. The problem with education is that homework and testing seem to be necessary "sticks" to make sure the kids are working and have learned something. It's a shame, because it often takes all the pleasure out of learning.

Your ideas are out of date. In the 1980's Japan seemed poised to overtake the USA in technology, but in the last ten years they've fallen off the pace.

>
> In order to get INTO school, in Japan, you must first QUALIFY. Only the

I've been to Japan many times. I am a great admirer of much of Japanese culture. I do a great deal of work with the Japanese space program. You don't know what you're talking about. The system you describe is Japan's greatest weakness, a system that programs students rather than teaching them to think. The best universities undo the worst of the damage for those lucky enough to make it there, but most of the rest never learn the independence of thought that is necessary to create new technologies.

Your theory founders when you consider the fact that children of Asian parents perform extremely well in American schools, far better on the average than American kids, even if they've never spent a day in Asian schools. Why? It appears to be because Asian parents don't have the American cultural distaste for real learning, the idea that you only have to study what interests you. I certainly see this at MIT, where an unreasonably large fraction of the very highest achieving students are US educated children of Asian immigrants. Asian parents and American schools are an unbeatable combination.

> By the time a kid is out of elementary school, he knows what he wants to
> be. I did.

That's your problem. An elementary education is an inadequate foundation for that sort of decision. The best EE I know has a degree in biochemistry. The physics professor who got me interested in astrophysics majored in music as an undergraduate.

> But, we force him into the socialist Liberal Arts
> courses educrats use to get that check.

We try to teach them to use a variety of tools to understand the world. One of my favorite teachers was my sixth grade teacher, a man innocent of scientific knowledge, but who could teach the wisdom of the ages through literature. He introduced me to a poem I love: The Blind Men and the Elephant by John Godfrey Saxe, a terrific antidote to the willful ignorance of ideology.

> How stupid! If a kid wants to be a car mechanic, he should go to the

In a democracy he has to become a voter. He has to learn to judge the issues rather than be gulled by those who tell him what he wants to hear.

> If he wants to be an asshole, we simply kick him out to be a common
> laborer and prevent foreign labor from entering the country to take his
> $1/hour job cleaning toilets.

You'd probably have considered Einstein an asshole. A high school dropout, kind of an Edwardian proto-Hippie, he revolutionized physics. Beyond the stuff he's more famous for, his work made it possible to understand quantitatively how vacuum tubes work and laid part of the foundation for the solid state physics revolution that led to the transistor. You like electronics? Thank Einstein. Good thing he didn't have to clean toilets for a living, eh?

> Minimum wage should be abolished. All it has caused is the $2000 Chevy
> now costs $30,000 and is still out of reach of minimum wage slaves. It
> causes gross inflation,

You apparently believe in discredited liberal economics. Friedman and his fellow conservatives have made an unassailable case that wage policy has nothing to do with inflation (which is why government wage/price controls don't work). Monetary policy controls inflation. Even the Liberals teach that now.

All American educrats should be required to spend a year in Japan to
see why our country is in such decline and why Asians are quietly
taking over in all areas of technology, today.....

In order to get INTO school, in Japan, you must first QUALIFY. Only
the BEST and BRIGHTEST kids go to school and are rewarded with a good
life. COMPETITION to get into and COMPETITION to stay in school gives
students that incentive to work very hard and, consequently, do very
well. School teachers are not prison wardens in Japan, like they are
in most schools here, now. Students not interested in being students
are sent out to become the labor slaves our troublemakers are going to
become, anyway.

By the time a kid is out of elementary school, he knows what he wants
to be. I did. But, we force him into the socialist Liberal Arts
courses educrats use to get that check. How stupid! If a kid wants
to be a car mechanic, he should go to the finest car mechanic school
as soon as he's a teenager to become the finest car mechanic on earth.
If he wants to become a carpenter, he should go to carpenter school.
If he wants to be an asshole, we simply kick him out to be a common
laborer and prevent foreign labor from entering the country to take
his $1/hour job cleaning toilets. Minimum wage should be abolished.
All it has caused is the $2000 Chevy now costs $30,000 and is still
out of reach of minimum wage slaves. It causes gross inflation, which
government bureaucrats encourage because of the graduated tax
structure which gives them a higher percentage of GNP if they create
inflation.

The country would have the finest craftsmen, the finest doctors, the
finest businessmen in the world....instead of the school system and
educrats dragging it all into the sewer like it is today. Not every
student needs to be a college graduate specializing in some
unemployable major so he has to become a government bureaucrat
draining the rest of us for the rest of his life. Many protentially
productive kids are simply trashed by our liberal arts educational
system which gives them NO skills except to become college students.

How stupid.....

> 807 PA

Well, since nobody else has commented yet...

Sounds like this would be fine. If you wanted to be able to double or
triple in the buffer then I'd go for the 6AG7 over the 6V6, but for
straight-thru, either tube would be OK. FWIW, in octals I like the
6AC7 as a low-level oscillator.
>
> will use pi-filter, but selectivity isn't too good so one or two tuned
> circuits will be added for the intermediate stages

I'm not sure you want the buffer to have both input and ouput tuned
circuits, since it's working straight-thru. May be better e.g. to run
the input (oscillator load) untuned and the buffer load tuned. Since
the 807 will be running class C, it will re-introduce junk anyway, so
if you want extra filtering it might be best to put it at the output.

Yeah, Larry, but don't some of those kids KILL THEMSELVES and stuff if they "dishonor" their family by not getting into the school they were supposed to? They go nutz over it--why? Is education really the answer to everything? Oh course, it's good...but really?

## 348. Motorola HT100

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-12 22:02:43 UTC
From: Mike Bogen <vze2833t@verizon.net>
Message-ID: <3E21E595.90A34E4@verizon.net>
Source record: 35266

Attention collectors. No matter how complete your collection, the odds are you don't have a Motorola HT-100. these were among the first surveillance radios. Circuit-wise the radios are very much like the HT-220 without the final transmitter stage. I have a UHF, A VHF, and an empty shell in brand-new NOS condition. The radios have both rubber duck and telescoping antennas. The operating radios are already on ham simplex frequiencies.

If you're interested DON'T hit reply. Please respond to mikebogen@earthlink.com

No trades

## 349. FS Drake MN2700 Antenna Tuner Very Nice

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-12 22:27:18 UTC
From: John Chesley <jvc@qis.net>
Message-ID: <uYIU9.30$i71.19725@news.abs.net>
Source record: 35267
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

For Sale: Drake MN2700 Antenna Tuner/Matching Network. Handles full legal limit. Matches Drake TR7/TR5 series equipment. Switches up to 5 antennas and tunes long wires as well. Also has large power meter and SWR bridge built-in. Case is non-sticky paint and has no scratches. Interior like new. Works perfectly. Pictures available upon request. $325 shipped CONUS.

Yeah...but for every one of theirs there's a thousand of ours falling
off the deep end of the social spectrum.

Education is a discipline. We have decided that its not politically
correct to teach ONLY math, geography, English and the names of rocks.
We have chosen to have our educational system be selective and let some
kids simply learn "arts and ebonics" to graduate instead of studying.
As a result we are graduating kids from high school who cannot write a
coherent sentence.
We as a society not only lose the skills but we lose the discipline of
achievement..and then some of them become teachers.

The kicker was a couple weeks ago when Geo. Bush declared that he wanted
to see every kid learn to read and write by the Third Grade. Duh?!?
What kind of standard is that?

-Bill M

I'm sorry. I was the lone exception who started reading at age two and had a large vocabulary and post-college reading skills in third grade (no the so-called IQ test doesn't peg me as a "genius" nor do I care for that appellation). I let it slide in 7th grade and had a passable (barely) GPA of 2.02. I was an unmedicated bipolar and didn't care cuz it was boring (I thought). I liked dances and cheerleaders (girls period). I read and read and frittered away (you may be right). But those were the best times of my life and I was always popular.

I went to our comm college too early and flunked out. Then when I found what I wanted to do and fought my way back to a Pell grant (out of my pocket I paid to restore it with 12 credit hours passed) and found a recording engineering program--BAM! I lost my home for eight months! When I came back I found that a new state law required instructors to have a degree in their field. My hobbyist teacher was gone and a poser in his place. The students left in droves and the program shut down. Then the tuition and expenses got to be pathetic and I had no resources (or desire) to move. I was HALFWAY done with the degree curriculum!

I have no respect for the CC anymore either--it's impossible for me to get anything from them of use there and they let a $1 million dollar embezzlement slip under their noses for how many years? Might I add an aside that the $400K benefactors they renamed the administration building for were my bosses for lawnmowing and they wouldn't give me a decent raise in 10 years of taking care of their lawn? Well that's another way OT story.

Tune in next week, kids and bring your 3D glasses!

Steven

## 359. Help w/Icom 720A Send-Rec Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-13 01:16:34 UTC
From: Richard Donahue <rdonahue10@home.com>
Message-ID: <v244s1ng2dkq39@corp.supernews.com>
Source record: 35277

Thanks for the help with the stepping relay problem I found it was a connector in the wrong place. I connected it wrong when I worked on the power switch.

Everything appears okay with the rig, but it still won't send or receive. When I say it appears okay I mean that the VFO tuning dial works, RIT, volume, RF gain, LED indicators, etc., all appear to work. I have noise coming out of the speaker and when I key the mic it goes into transmit mode but no power out. When I replaced the power switch I put a connector or two back in the wrong place or upside down. I've tried experimenting with it but no luck. Does anyone know which connectors on this rig I should be looking at?

For an 80 and 40 meter transmitter, straight through, all you would need is a 6AG7 driving an 807 PA. Regarding the controlled carrier, an early ARRL handbook should have info. At worst case, find the schematic and manual for the Heath DX-60 transmitter. It used a 6146 PA with Controlled Carrier modulation. The circuit should be readially adaptable to the 807.

It's precisely what they do in the Japanese system you like so much. It's why Japanese students do so well on tests. However, the Japanese system is not producing many independent thinkers: entrepreneurs like Morita and Honda who gave US industry such a scare were the product of postwar chaos, not the rigid tracking system of today.

Yes, works fine here (Netscape 7)... but aparently not on IE6.

Cheers,
Fred

One of those terrible students walked into one of my customer's
Steinway piano stores and very politely asked if she could play the 9'
Steinway the store rents out to concerts, etc., that's kept in the
center of the Steinway sales floor on display, otherwise. She was,
ummm...about 8? 9?....I had to crank down the artist's piano bench so
she could reach the pedals on the beast.

Our reward for being nice was both a classical and jazz concert for
the next 45 minutes, that would have made any large hall create a
standing ovation. Her "programming" was beautiful to listen to, and
not once did she play the Fur Elise all piano sales, service and
moving people grow to hate. Her grasp of the music of Duke Ellington
was simply amazing!

When she had completed her recital, she very courteously thanked us
for letting her play such a fine instrument. Hell, if it had been
mine, I would have followed her home so she'd have a practice piano
and when she was rich and famous she could pay me back. All the piano
sales people, all very practiced players themselves, refused to play
anything for the rest of the day for fear of being laughed at....(c;

Proving our problems really start at home and self-perpetuate because
American children are simply turned over to the educrats, while the
parents wash their hands of them for 12 years. Everybody should let a

government bureaucrat raise their kids, shouldn't they?

I agree that if you enter a classroom and there are 3 Asian kids, your chances of being #4 in the class only rises if more of them don't show up half way through the semester. You have 0 chance of being at the head of the class. Genetics?

You are not talking about "normal" children. You are talking about those, under my plan, who would still be in the academic school but would graduate Grade 12 with the education of a college junior because the car mechanics, plumbers, machinists, floor sweepers and toilet cleaners would no longer be in the engineering class to hold everyone headed for MIT back while the teacher tries to pour 4th grade English into them, a futile effort because they could, frankly, in their words, "Give a shit less."

None of your examples could have possibly failed in life. They are the cream of the cream of the crop....

We try to teach them, a futile effort (see above quote), at the EXPENSE of those who ARE interested. The classroom warden spends her time trying to restore order, sending those children I like to call "Inmates of Tomorrow" to the office for disposition and watching her back in case any of the student drug dealers are "packing" today.

What the hell kind of environment is that? NOONE can possibly learn anything while being taught on "The Yard" of a correctional institution, which is exactly what most public high schools in major cities looks like....barbed wire, cameras, metal detectors, full body searches by uniformed police officers....

>for a living, eh?

Dr Einstein was, as was Thomas A Edison, a great promoter....of
himself. Do you really think a genius like that could go unrecognized
by any school bureaucrat? Would it really make a difference if he
was?

They refused to recognize, and the Smithsonian CONTINUES to refuse to
recognize, the genius of Nikola Tesla, who had to fight Edison and the
academics over AC power, arc and flourescent lighting, and the whole
list of his inventions, including the AC powering your computer.
Tesla wasn't ONE OF THEM. Do you think it would make any difference
if some government bureaucrat tried to train Tesla as a carpenter? I
don't think they would have mattered at all! Tesla's genius didn't
come from some "institution". Hell, the institutions didn't want
anything to do with some poor little kid from Eastern Europe.....He
wasn't even Jewish!

If you are referring to the example of Cambodia, then I believe they went a bit further along the education continuum (unless you contend that 30% of the Cambodians were academics).

Excellent post, Bill. I taught electronic technicians in a regional technical education center, after the educrats had forced them to go to 12 years of pre-liberal-arts and taught them to hate all education in the process. I got students who were the dropout end of the spectrum, by then. One Air Force Colonel said to me in front of my school president, "What have YOU done to my SON?!" (I figured it had been a pretty nice job, in spite of the awful low pay...but I was ready at that moment to go back to work.) "My son has flunked every math course he's ever taken! He HATED high school!", the colonel went on to my immediate relief. "He came home from your class on the third day and wanted me to buy him a SCIENTIFIC CALCULATOR?" The poor colonel looked quite shaken. His son had never asked for an educational tool, before. It came as quite a shock....

Question - Did any high school math teacher take the class out to the flagpole to figure out how high it was during trig class? Did they ever lay out an aeronautical chart and show them how to USE trig for something USEFUL, instead of telling them this was a required course for the diploma and you'd better damned well memorize it for the test?!! No, they didn't. I always had to teach basic trig at the beginning of my AC electronics/power phase because the students forgot everything about trig they hated because the ONLY reason they needed to "learn" it was because of the TEST. (By the way, the colonel proved very useful for the next few years acquiring new aeronautical charts for my trig refresher training from the local AFB..(c;) The civil engineers soon forgot I had the old transit after they got their new HP infrared distance meters...At least they never asked for it back.

ROTE MEMORIZATION OF TERMS is no way to teach ANY kid ANY subject...idiots! But, that's what a lot of high school classes are all about. I asked a local high school history teacher what historical sights he had taken the history students to, here in historic Charleston, SC, where the Citadel Cadets had taken it upon

themselves to fire cannon at the startled Yankees in Ft Sumter at 0530 a few years back. I wanted to know why his classes never went to Ft Sumter, Ft Moultrie, the United Daughters of the Confederacy Museum loaded with REAL hardware they could touch and feel. I never got a straight answer.

My kids got lots of hands-on training to become electronic technicians. Some even got knocked on their asses with high voltage! I hope Mr Tesla was watching....(c;

Ah well, that explains a lot; you are a Tesla monomaniac. There should be a
new postulation, similar to the "Hitler" postulation; the first poster to
invoke Tesla in support of his arguments forfeits all further credibility.

Steven, if I could have made arrangements to take you out of the
boring classes and gotten you an apprenticeship at a broadcast station
or recording studio near your home, would you have been better off in
the 7th grade....even if it were only for one day a week or a couple
of times per month?

If you had had training in your field in high school, would it have
helped you get advanced training and better placement in your chosen
profession?

I've just look up on my wall at a picture taken by a private, elite
high school teacher of two boys in a tiny closet room through that
window in all the doors. The skinny nerd is standing next to a fatter
kid that's seated at an old teletype machine online through a telco
loop to a mainframe in a nearby college/university. Those boys were
very lucky they weren't subjected to what the average public high
school kid is subjected to...rote memorization and NO TOUCHING! The
picture is like looking at a nuclear weapon 50 microseconds before the
implosion sequence sets it off. The fat kid seated is Paul Allen.
The skinny nerd is the richest man in America, Bill Gates. The
caption is, "We just told it what to do and it did it!"...or something
like that.

The kids in PS 302 have an old Apple 2E, but their teacher has been
guarding it with her very life since the school got it back in 1996
after a long budget battle, and they're not allowed to touch it.....

Here in San Diego, we're doing a fine job of Americanizing various Asian groups; we now have Vietnamese, Cambodian, Filipino and Laotian street gangsters striving for the American Dream (or at least a piece thereof). I doubt that many of them can find the area under the curve.

Rote memorization appears to be the way that most everyone learns their primary language. I also believe that this method is appropriate for subjects such as the alphabet and multiplication tables. A base of knowledge must be programmed into a youngster's mind before you can move on the "why" of further education or field experimentation.

I believe that the Japanese educational model (which you seem to praise quite often) places very strong emphasis on rote memorization. Some would even say that this is carried on for far too long, creating educated droids with limited innovation abilities.

in 1991, yeah. I'm ashamed to admit I've ever been aware of our local excuse now, and CC owns my favorite station of 32 years. I know the engineer for Journal from 24 years back and he's anti AMS cuz he liked Kahn. Don't misquote me, cuz I like him lots. There is a recording studio in Fruitland that I've been meaning to call before they go away, and I'd love to record a demo and get training. I have 6-7 songs in need of production and mostly there. Did I mention the Sansui has a mic mixer and I could do one layer of overdubbing with my $3.50 Sony ECM-99 one-point stereo microphone or a set of headphones and my TEAC and Pioneer cassette decks in Dolby C HX Pro? Perfect for my all voice "Stupid Alternative Song" (it's goofy, all right). At least I THINK the mixer goes out to the tape monitor...then I can record to CD and cassette again ad nauseum. Complicated yeah but it would work.

Wish I had a Tascam 8-track or 4-track cassette with dbx though.

Always wishing,
Steven

The frightening thing about Japan is that a society based on group-think and group consensus has been able to achieve so much. If the Japanese encouraged truly original and independent thought...

Looking for a GOOD, WORKING Astatic MC320 mic element,
the one that goes inside the D-104 mic head. I bought
a D-104 on eBay and the element turned out to be bad,
but the rest of the mic is in excellent shape. Anyone
have a D-104 head that works but is scruffy and ugly?

73,
Dean K5DH

Dean........I tell ya what will sound good in that head. A Heil HC-5
cartridge. I put one in one of my D-104s. Excellent audio.

40 some-odd years later, I'm actually glad that I had to memorize multiplication tables etc., after watching all three of my kids (so far...the youngest is in kindergarten) struggle with the concept.

God, how I *hated* "2 x 2 is 4, 6 x 6 is 36" and so on! However, it's second-nature to fire off the answer to any multp. question...before I even think of it, it pops out. Maybe they eventually get the same result by repetitive usage--hell, my son's in grad school (Ph.D. physics)--I doubt if he has any trouble whipping off the answers to such questions, but....

Was this K2-W the opamp that had the radioactive paint on the neon
bulbs to stabilize the firing point?

I think I have one of these opamps in my junkbox somewhere, compliments
of the stuff that Fairchild Instrumention Division tossed out back in
the mid 60's.

Anyone remember the chopper stabilized Philbrick USA-3?

## 400. Gonset Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-13 23:33:24 UTC
From: Ronald Oberloh <wa0kds@yahoo.com>
Message-ID: <3E234CC4.E9EF4173@yahoo.com>
Source record: 35223

I just bought a Gonset GSB-100. I am aware that the transformer was a bad design in this unit. The GSB-100 that I bought has a rewound transformer by W4CLJ in 1976. I was wondering if anyone knows anything about what he did with the transformer. It says that it was number #212 so I assume he was in the transformer business. I believe he is a Silent Key and someone else has his call at this time.

Any insight into this issue will be helpful. I have not plugged the unit in yet. I am trying to dig out as much info first that I can and do any modifications that might be required to make sure that the current transformer which at this time I am assuming is OK will not blow when I power and load it up.

Thanks
Ron WA0KDS

# 401. WTB - Heathkit SB-220 Sheetmetal Parts

I am looking for the aluminum sheetmetal for the Heathkit SB-220 amplifier. I need the the left, right, center divider and top perforated cover for it.

These are not the outside case but the aluminum panels that bolt to the chassis.

Must not be dented or badly scratched.

Please state price and condition on reply.

I am also looking for any parts that you might have. Switches, chokes, tube sockets and etc. Yes, I have already checked on eBay.

> school bureaucrat? Would it really make a difference if he was?

It is a matter of historical record that Einstein's teachers did not recognize his genius. He had to get the attention of the top physicists of the time (particularly Lorentz and Planck) to have his talent recognized. That would be even harder today, I think, and I wonder if things might have come out differently if Lorentz had been prone to professional jealousy.

> They refused to recognize, and the Smithsonian CONTINUES to refuse to
> recognize, the genius of Nikola Tesla, who had to fight Edison and the
> academics over AC power, arc and flourescent lighting, and the whole
> list of his inventions, including the AC powering your computer. Tesla
> wasn't ONE OF THEM.

I think Tesla is pretty well recognized: how many people have an SI unit named for them? Tesla *was* a genius, but he had some very real flaws that prevented that genius from reaching its full potential. His hydraulic analogies led him to a clear vision of the technological applications of induction, but they were not adequate to understand radiation. Without a proper understanding of radiation, his wireless experiments could yield spectacular demonstrations but could not be brought into the realm of quantitative engineering.

Tesla apparently had no concept of an antenna. Any lump of conductor will serve to some degree as an antenna, but efficient and predictable performance of wireless devices requires antenna engineering. Hertz had invented the antenna and had published a very detailed mathematical theory of antennas, but Tesla denied that this work had any relevance (highly abstract math was not Tesla's strength). Edison didn't let his scepticism of academics prevent him from employing them and using their insights when he needed them, but Tesla was too vain. Respect is a two way street.

I think there's a case to be made for a strong (if indirect) connection between Tesla and Einstein. The textbooks like to claim that Einstein's relativity theory was motivated by the failure of the Michelson-Morley experiment to detect the ether, but if you read his original 1906 paper it is very clear that he was much more influenced by the symmetry of inductive phenomena: why does it make no difference whether you move the magnet or the wire? This was not on the minds of professional physicists, but Einstein undoubtedly encountered this frequently in his work reading

patent applications. That patent applications were full of inductive
technology in 1906 was the result of Tesla's technological revolution.

## 416. Panel Word Decals - Hallicrafters and others clarification

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-14 06:36:33 UTC
From: rockseaent@aol.com
Message-ID: <20030114013633.02201.00000229@mb-cl.aol.com>
Source record: 35238

Apparently the Hallicrafters Reflector is passing on some bad information. I posted a message in the boatanchors news group asking for input for general communications panel words that would be desirable on a decal sheet. This sheet has now been completed and is available, but will be introduced in the next issue of Dial News. The new decals brochure has been printed. If you would like one, send your name and address and ask for the "second quarter 2003 decal brochure".

As far as custom sheets for a particular model, none have been completed except for the Hallicrafters S-38/S-38B which has been in our line for some time.

If you would like to submit information for the possible production of a custom decal panel word sheet for any make or model of communications receiver, you may. If possible, send a photocopy of the front panel, exact size. (this may not be convenient, but if anyone has a loose panel, it makes the best template for artwork). Otherwise, send a close up photograph or a number of photographs showing all of the decals on the panel and include dimensions. Also include the make and model, your name, address, telephone number and e-mail address with the copies or photos. Mail to the address below.

Before you do this, check the word list for the RN series listed in the second quarter decals brochure as there may already be sufficient words to do your panel. The RN decal series of decals has not yet been posted on our web site list.

Decal information can be viewed or downloaded from our web site at:

Message-ID: <LRWU9.9452$Dq.989116@newsread2.prod.itd.earthlink.net>
Source record: 35145

I have a number of Swan radios and accessories that I am selling for a friend, who due to health problems is having to liquidate his ham gear. The gear looks good, cosmetically. Some of the cabinets look like they have been repainted. Operationally, most of it is unchecked.
I did plug the amplifier in and it blew a fuse. Items FS are:
1. Swan 700CX Transceiver. Looks complete except no 8950 final tubes.
2. Swan 500 Transceiver. Looks complete including final tubes.
3. Swan 117XC Power Supply, Speaker Console.
4. Another Swan 117XC Power Supply,. Speaker Console.
5. Swan Cygnet 1200X HF Amplifier. Has a new set of four 6MJ6 Tubes installed. Correct Tubes?
6. Swan VX-2 Vox unit.
7. Swan WM 1500 Watt Meter.
8. Swan ST-1 KW Antenna Tuner.
9. Several tubes. New set of 6LQ6s, 2 new 6KD6s, 1 6MJ6, 1 6JS6.
10. copies of most manuals and some original factory literature.
I can take a digital picture of the gear and e-mail to you if your interested. I wish that I could be more specific about the operational condition of equipment. I do know that is has not been on the air in many years. Some of it probably needs some new caps. Price for the entire lot is $875. Thanks, Charlie Hugg, K5MBX

## 423. Schematic for a BC-224A receiver anyone?

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <775964c0.0301140829.2d44f837@posting.google.com>
Source record: 35146

Folks:

I need a schematic for a BC-224A WWII receiver. This is an HF radio like a BC-348, but is much earlier and has the pre-octal "fat pin" tubes. The "A" model is unique in the series, so I need to have the correct schematic. Anyone help? I'll be happy to pay postage and copying costs, or a good high-resolution scan would be fine too.

Thanks,

Rick WA6NCX
remler@juno.com

I am looking for the aluminum sheetmetal for the Heathkit SB-220 amplifier. I need the the left, right, center divider and top perforated cover for it.

These are not the outside case but the aluminum panels that bolt to the chassis.

Must not be dented or badly scratched.

Please state price and condition on reply.

I am also looking for any parts that you might have. Switches, chokes, tube sockets and etc. Yes, I have already checked on eBay.

FS: Collins Broadcast 1 Kilowatt Modulator, from 20V transmitter. It contains the complete modulator deck, Mod transformer, extra 4-400 tubes, and choke. This would be a great start for a hombrew transmitter. It should fit in most racks with no problem. Also have schematic. Many caps and resistors have been replaced, needs little work to get operational. This was removed from an working back up transmitter and has been in storage for a few years. See pictures @ http://members.aol.com/videotronix/mod1.jpg
http://members.aol.com/videotronix/mod2.jpg
http://members.aol.com/videotronix/mod3.jpg
http://members.aol.com/videotronix/mod4.jpg $375 pick up only near Philadelphia
Other 20V parts available, email with needs.

Thanks,
Jim

Thank you, John, for the insight. Very interesting.....

I still think it's a travesty that the Smithsonian refuses to display Teslas wonderful inventions under the AC lighting that lights up, ironically enough, the Edison display...(c;

Maybe if we feed Edison DC power to the Smithsonian building and remove all of Tesla's AC they will change their minds.....???

Don't forget to remove the flourescent lighting, multiphase induction motors, and all that AC stuff Edison used to electrocute cats with in Central Park to try to show the public how dangerous it was.

Maybe the Smithsonian should get an original Edison AC invention....the electric chair...from Auburn, NY's prison to display. You hardly ever hear about Edison's electric chair invention, these days....

It's probably best for the country that Tesla didn't have the expertise in antenna design and construction. If he had, our ancestors, probably, would have been FRIED with the RF from him and you and I would have never been born!

His HAARP invention certainly has a nice looking antenna field....

What do you know about the HAARP weapon and its progress?

Having come in late and finding the only posts which I can read start
here:

I think the "primary language" learning is a bit different than what
we call "rote". It's quite a complex issue.

>>subjects such as the alphabet and multiplication tables. A base of knowledge
>>must be programmed into a youngster's mind before you can move on the "why"
>>of further education or field experimentation.

Even beyond the teens and into adult life, there are many functions in
math (particularly trig) that must be memorized. The same is true even
in Calculus. (Even beyond Calc one and two)

>
>But, should it be the way to teach electronics to adults? History to

Some subjects require a bit of both.
As far as electronics the "basics" need to be memorized, such as Power
= IE (remembered as Power = "PIE"). , It's also P = I^2*R, so R =
P/I^2 and I^2 = P/R, or I =SQRT(P/R) From there you can get
all the other power and voltage rules
Many times it is sufficient to remember that every doubling of power
is 3 db (or close enough to answer any practical question)

However, some where along the line you would have to have learned how
to manipulate the formulas.

The person testing in electronics who knows the basics and has the
ability to manipulate the formulas, has a distinct advantage over the
person who has to memorize all the questions.
OTOH, some are very good at memorization.
There is a whole field (used to be called neumotechniques) based on
the art of memorization. I don't think that neumotechniques is even in
the dictionary now and no, I don't remember what they call it. <LOL>

>late teens? Why? So they can answer the stupid questions on
>Jeopardy?

The history we learn as High school students and more so at the college level is supposed to give us a basis on which to make judgements. WE are supposed to learn from history and thus not repeat the mistakes of the past.

Unfortunately, it seems as if few adults paid any attention to history and we are now doomed to repeat the mistakes of the past,... just like those before us have done.

The history taught in college is not the sanitized stuff taught in the lower levels. We get to find out just how much luck played a part in many great battles, how some of our great forefathers won battles due to just plain dumb luck and how great a tacticians some others may have been.

Take for instance the great crusades we were taught about in Sunday School...In college you find out just how radical and violent they were. That and many of the crusaders were convicted felons turned loose to fight...Or they could rot in jail.

>>
>>I believe that the Japanese educational model (which you seem to praise
>>quite often) places very strong emphasis on rote memorization. Some would
>>even say that this is carried on for far too long, creating educated droids
>>with limited innovation abilities.

Rote memorization is the basis for the foundation on which the rest of our education is built. Without a good solid foundation it is as difficult to build an education as it is a house without a solid foundation.

However, once the foundation is built, reasoning powers are brought into play. Each subject progresses at a different pace and will probably still contain some rote memorization. Each individual learns differently as well...
Therefore, there is no such thing as treating all students the same. To do so will hold some back, push some so hard they become discouraged, and others will fit right in. Unfortunately, in many cases it is unfeasible from an economic, or personnel standpoint.

It would take at least 4 to 6 years to give a person a well rounded education without singling out any specific topic and another four to specialize. Not many families could afford that, even IF the student were willing. Given that the goal of most students is to survive high school. Of those that do go on to college, they overwhelmingly choose the humanities, instead of science.

It used to be that high school was to prepare us to go out and get a good job, now it only prepares up to go to college, or in some instances, learn a trade.

I was 47 when I quite work and went to college full time...It was well worth it even if I never did make back all the extra money it cost. It was also at a time when I could appreciate the subjects, be they

History, Anthropology, Art, Math, or Computer science.

Now, as this is in an Amateur Radio Group, I'm going to make the assumption (I can't bring up the rest of the thread on line or in Google) that this probably started about memorizing the test questions for the different license classes.

Memorizing the questions, out of context and without the rest of the subject does very little to demonstrate anything other than that persons ability to memorize. It does not demonstrate that persons qualifications at any thing other than passing the test, BUT... Neither does it say the person doesn't have the qualifications to become a good ham.

How we handle tests and how we conduct ourselves on-the-air have no relation to one another. Just listen to 3.895 and many other frequencies for a while... Many of those operators have reached the highest level licenses...That is not saying that every one operating on 3.895 misbehaves.

Although you can intuitively understand a dipole antenna (or a monople with a
good ground plane) by analogy with an organ pipe or guitar string. Helmholtz'
acoustic theories were well published by then, though probably also shrouded in
gobs of ungainly equations. --Mike K.

I have for sale a Knight-Kit T-150 Transmitter. It is incomplete in that it does not have a cabinet and all of the tubes are missing except one 6146. The knobs are original and all there as is the VFO and major components. The Front Panel has one extra hole where someone mounted an additional switch. This is a 150 watt input AM/CW rig from the 50's. I have a copy of the schematic and Operating Instructions. I think that with a little work this rig could be back on the air. Price is $75 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

It sounds like you may have your LO injection cables reversed. I don't know the scheme you rig uses, but if it a dual loop synthesizer, your major loop will tune your 1st mixer, while your fine resolution loop will provide injection to your 2nd mixer. The fact that you have can hear noise tells me that your I.F. strip and your audio stages are working. Also, you are able to go into Tx mode, even though there is not output, at least your microcontroller is working. As far as those injection cables.....sometimes an actual cable connector is used, while in other cases, the LO injection cable plugs into a 2-pin header. If this is the case, you MIGHT have it backwards. I hope this helps!

Pete

Do a web search on "All-American Five" and you should see the standard
five-tube radio circuit.

You should be able to get all the parts you need from Antique Electronics
Supply in Arizona. They might even make an AA5 kit.

The AA5 design is actually a pretty good performer. It was dirt cheap to
make and the one on my desk will still pick up Canadian and Mexican skip
at night quite nicely, plus the Cubans.

World War II microwave power meter type TS-226A/AP. The meter is fitted into a wooden carrying case which also contains a set of heavy duty coaxial leads, an attenuator and a holder for spare fuses and bulbs. The meter is in good condition for it's age with just a small amount of corrosion on one side of the chassis, whilst the outer case is in very good condition. Please contact me if you require more information or a photo.

Asking 20 GBP plus shipping.

I am looking for any parts that you might have. Switches, chokes, tube sockets, input network and etc. Yes, I have already checked on eBay.

I am also looking for any of the aluminum sheetmetal for the Heathkit SB-220 amplifier.
I need the the left, right, center divider and top perforated cover for it. Tell me what you have, let's deal

These are not the outside case but the aluminum panels that bolt to the chassis. Well if you had a case, I would be interested in that too.

Must not be dented or badly scratched.

Please state price and condition on reply.

## 464. Need info on Kenwood TS-830S dial calibration

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-16 08:38:40 UTC
From: k9sqg@aol.com
Message-ID: <20030116033840.18514.00000014@mb-ma.aol.com>
Source record: 35187

Does anybody know the fix for analog dial calibration on the Kenwood TS-830S? The procedure in the manual, holding the outer ring of the the VFO dial and rotating the knob, has no effect on mine. This is the same way the Drake PTOs work on the C line, 7 line, etc., but not sure what is involved to get the TS-830S to operate that way.

## 465. FS: Lot of 30+ Old Time (1950s & 60s) QSL Cards

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-16 12:39:13 UTC

# 466. Re: Help w/Icom 720A Send-Rec Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-16 16:03:11 UTC
From: Richard Donahue <rdonahue10@home.com>
Message-ID: <v2dltoiks7h1d7@corp.supernews.com>
Source record: 35189

I went back and looked at it again. I'm pretty sure the connectors are all in the right place. My diagrams show that they are anyway.

However, playing with it again I noticed that if I spin the VFO dial and when it comes to rest sometimes the receive noise picks up. At that exact moment if I key the mic, it transmits and puts out power. So I'm looking at the VFO connections some more. Maybe it's just a loose connection (wire) around the VFO. I remember I pinched a wire going to the VFO the first time I put it back together. Possibly the problem is around that point.

If anyone has any more suggestions I'd appreciate it.

Rich

The subject item is a Communications Spectrum Analyzer that has a PC interface and I wonder if anyone has any info such as a manual or software? One unit I saw was labeled 800 to 1000 mHz and the other although nearly identical didn't have freq range. I'm guessing it's for cell phones and maybe cell phones only. Without any info this would make a boatanchor as it has a handle for the rope!
tnx

Ron,
Jess Price, W4CLJ, rewound transformers for a long time. For years there was an ad in Florida Skip magazine: "Transformers rewound. Jess Price, W4CLJ," followed by his phone number.

I never had him rewind a transformer (I was lucky that none of my boatanchors needed it), but I knew a few people who used his services. I believe he ordinarily rewound the transformers to their original specs.

It's interesting that you brought up the GSB-100, because just yesterday I read an article in a 1963 issue of 73 by a guy whose GSB-100 tranny died. He adapted a standard TV-replacement transformer, using a bridge rectifier and the "economy" circuit instead of the multiple taps of the Gonset circuit. I'd be happy to scan it if you would like to see it; he discusses the Gonset design and the reasons he opted to do the mod.

73,
Ted Zateslo, W1XO

## 478. For Sale: Various Items

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-17 00:02:24 UTC
From: David Hollander <n7rk@cox.net>
Message-ID: <3E27481C.7817924C@cox.net>
Source record: 35101

Here is a bunch of stuff for sale. Prices do not include shipping unless

specified.

Click on the links for pictures.

Parting out the following radio:

Hallicrafters SX-96

What do you need?

Hammarlund HQ-110 with copy of manual.....$125
I have checked all the tubes and they are good. The receiver has weak
audio but no signals. Outer case is real nice, panel has scratches along

the outer edges. It needs a new cover for the clock (reproductions of
these are available). The underside of the chassis is very clean and
appears unmodified. The top side needs cleaning. The radio has all of
the correct knobs however the clock knob is missing I collect National
and Hallicrafters and have no interest in Hammarlund.
http://members.cox.net/radiostuff9/hq110.jpg
http://members.cox.net/radiostuff9/hq1102.jpg
http://members.cox.net/radiostuff9/hq1103.jpg
http://members.cox.net/radiostuff9/hq1104.jpg

International VHF Converter/Power Supply.....$30
A home-brew power supply assembly which has an International FCV-2 2
meter converter, a VFA-1 pre-amp, and a home-brew oscillator. The
circuit board on the FCV-2 is
cracked. Looks like it is (or was) a tunable VHF converter.
http://members.cox.net/radiostuff9/hbconverter.jpg
http://members.cox.net/radiostuff9/hbconverter2.jpg

National Type ICN Dial.....$40
This was removed from a piece of equipment. It is in nice condition.
I have created a new dial scale with my scanner since the original had
the owner's call on it. The original dial scale is included. Includes
the dial lights (not
shown) but it is missing one of the "L" shaped dial light brackets.
http://members.cox.net/radiostuff9/national_dial.jpg
http://members.cox.net/radiostuff9/national_dial2.jpg
http://members.cox.net/radiostuff9/national_dial3.jpg

Precision Series E-200-C Signal Generator.....$50
This unit covers 90 kHz to 120 MHz. It has two separate
adjustable RF outputs as well as internal modulation and adjustable AVC

voltage. The tuning dial even has a smooth vernier movement. This unit
has been tested and works
great. It is in excellent condition cosmetically
http://members.cox.net/radiostuff9/precisiongn.jpg
http://members.cox.net/radiostuff9/precisiongn2.jpg
http://members.cox.net/radiostuff9/precisiongn3.jpg

Century In-Circuit Capacitor Checker with manual.....$35
A compact unit that works great.
http://members.cox.net/radiostuff9/capchecker.jpg
http://members.cox.net/radiostuff9/capchecker2.jpg

RCA WV-97 VTVM with WR-69A test probe.....$25
Has a genuine RCA Laboratory decal on the top! Working but
needs calibration
http://members.cox.net/radiostuff9/rca_wv97a.jpg
http://members.cox.net/radiostuff9/rca_wv97a2.jpg
http://members.cox.net/radiostuff9/rca_wv97a3.jpg

McMurdo Silver Model 900 VOMAX VTVM with manual copy (not
working).....$20
http://members.cox.net/radiostuff9/silver900.jpg

GenRad W50MBB Variac Autotransformer - appears new - $350
http://members.cox.net/radiostuff9/bigvariac.jpg
http://members.cox.net/radiostuff9/bigvariac2.jpg
http://members.cox.net/radiostuff9/bigvariac3.jpg

Superior Instruments Model 77 VTVM. (3 tube unit with a lighted scale.
Inside looks excellent but needs work) ..$15
http://members.cox.net/radiostuff9/superiormeter.jpg

CTS 15 Inch Speaker From Hammond Organ
Sounds great on my workbench receiver which is an SX-96! This would make

a beautiful sounding speaker for a boatanchor receiver if you have an
enclosure..... $50
http://members.cox.net/radiostuff9/15inchspkr.jpg
http://members.cox.net/radiostuff9/15inchspkr2.jpg

National Radio Institute instruction pamphlets and a group of NRI
Journals from the 1960's. Their are 11 of the journals, 1 service notes
book and 65 of study schedule and demonstration booklets and 1964 Golden

Anniversary edition Some good ads on the Conar Twins in the gold
edition.....$20
http://members.cox.net/radiostuff9/nri_journals.jpg
http://members.cox.net/radiostuff9/nriphamplets.jpg
http://members.cox.net/radiostuff9/nrigold.jpg

I will ship overseas.

You can check my user ID "n7rk" on Eb*y
for a reference as to dealing with me.

Thanks for looking and 73,

Dave N7RK

$250 Reward, No Questions Asked-
For the return of my Navy AMA radio, serial #205,
which was stolen from Greenville, Texas.
An AMA is a WW-II "handie talkie" that looks just like
the famous BC-611 handie talkie, except it has a Navy
nomenclature tag on it and a navy-marked chassis inside it.

Photo of the nomenclature tag is at:

http://home.mindspring.com/~arc5@ix.netcom.com/amatag.jpg

Thanks.

It was to be Motorola's new generation of service monitors but it got
scrapped. It started out as
an 800 - 1000 mhz monitor for cellular base stations. Had a very nice
spectrum analyzer in it.
Runs off a PC. They never did expand it to other frequency ranges. The
whole project got killed
before it really got to market. A few units got sold and that was it.
Unless they have resurrected
it, it is a dead horse.

## 484. Lavoie LA 800, Simpson meter ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-17 04:55:04 UTC
From: Henry Kolesnik <wd5jfr@oklahoma.net>
Message-ID: <v2f35l9p3bjh55@corp.supernews.com>
Source record: 35107

I'm restoring an old Lavoie LA-800 WWV Comparator and the Simpson AVC meter is beyond repair. Simpson plated the magnet with some kind of chrome and its peeling resluting in little pieces lodging between the poles and armature. The meter is for a 2 3/16" round hole but has a square face plate. The meter face is 0 to 15 VDC and on the side in small print is SK 525-18. I don't know the sensitivity of the movement but it connects to the AVC line thru a 560k ohm resistor. I'd sure like to find a replacement, any tips appreciated.
tnx
hank wd5jfr

> Thanks in advance for your time and consideration.
> Mike H.

Do you have your inputs and tape selector switches properly set?? I
seem to remember that there were also jumpers between the preamp and
power amp sections of the receiver (at least my 2270 does) --- are
they properly jumped?

If you hear the speaker relay click, then you don't have any DC offset
in the PA transistors. Listen for any hum or hiss in your speakers
(very very low level).

I once bought an amplifier that was thought to be DOA --- all that was
wrong is that the tape monitor switch was in the wrong position.

You can also use your finger on the center prong of an RCA-RCA cable
plugged into various inputs/outputs to see if you get a growl or not.
If all else fails, get a book and go from there.

Of Course, your intention is to run it at the
legal limit of 375 watts carrier.....right?

Put a keyer circuit in, use it for CW. Enough
spatter on the bands now.

IIRC, the ARRL Handbook has (certainly it used to have) a
schematic for a bridge that you can use to find the full-scale
current for the meter. Or you can use a known voltage source, a
_BIG_ pot, and a working milli- or micro-ammeter to do the same
thing, but a little more dangerously.

Probably a quick Google will find you other sources for the
schematic, too.

It was too late last nite..
The stuck meter measures 1840 ohms on my Fluke 87...
I put the Fluke in series and read about 3 micro amps..
Using the Fluke as a voltmeter I saw about 2 volts..
The meter is very similar in appearnce and size to the S meter used in
Collins S-lines.

From: Roger Basford <Basford@btinternet.com>
Message-ID: <gxCKqoKGjHK+EwHQ@btinternet.com>
Source record: 35118

Hi All,

I'm looking into using solid-state replacements for a number of 5R4 tubes in a couple of restoration products. A Web search turned up a number of hits for ready-made units at quite low prices when compared to the price of good tubes. Has anyone any recommendations as to a good S/S substitute or point me to any info on building my own?

73,

Parting out a Swan 500C - what do you need? No bottom cover and top cover is rough. Plenty of other parts including a VX-2 VOX unit.

Still parting out a Hallicrafters SX-96, lots of chassis parts, a few of the knobs and the main and bandspread tuning dials. No panel or cabinet.

Contact me directly, not the list

A bunch of us are selling some BoatAnchors tomorrow (1-18-03) at the
monthly ham swap at Cal Poly.
Some things that will be sold are: SX28, 75A1, more
Hallicrafters,Heathkits, Gonsets, Hammars, Nationals, etc, etc, etc.
No prices available at this time (most of these aren't mine).
Cal Poly is near the intersection of the 10 and 57 freeways. It starts
early and is pretty much finished by 10 or 11.
John, KU6X

Your web search seems to have found what you are looking for so I am not quite sure what your
questions is. I have replaced every tube in a radio with solid state devices wired into tube bases,
leaving the filaments powered for that "antique glow". My co-conspirator on this project actually
went into business selling these plug-in replacements . I did a web search for his specific shop and
did not come up with anything. Will dig deeper tomorrow.

Steve

Hi Steve,

Sorry, I should have been more specific. As there were several devices
on offer I was really looking for impressions as to reliability, etc. My
application is for medium power AM transmitters like the Heathkit
DX-100U, etc.

Regards,

## 509. Transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-18 14:47:41 UTC
From: Oris <oris@dirtball.com>
Message-ID: <3E296919.4000400@dirtball.com>
Source record: 35132

Does anyone know where I can find a Low Voltage transformer for a
Johnson Viking Valiant II. Peter Dahl wants 165, I'm looking to see
what are my other options are or maybe other sources for transformers. I
have been told that that is high price for the transformer. The voltages
on the secondary of the transformer are
215 V Blue to red yellow
215 V Blue to red yellow
310 V Red to red yellow
310 V Red to red yellow
2.6 V Brown to Brown
6.8 V Green to green
5.4 V yellow to yellow
Also I am looking for a 5R4 rectifier. Under advice I was told to
trash the 5V4 tube. They say that it shorts and will cause the
transformer to let the smoke out.
73 and thanks
Oris

I have decided to put one of my Signal/One CX-11As up for auction. This is
an
exceptional transceiver with all of Paul Kollar's updates. The Auction ends
this Sunday. Please see it at:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1951028448&ssPageName=ADM
E:B:LC:US:1
Please take a look at the pictures even if you are not going to bid. I have
some nice close-ups of the radio.
Thanks,
Charlie Hugg, K5MBX

## 513. FA: Kenwood TS-520SE Transceiver w/desk mic

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-18 18:58:32 UTC
From: Steve Silverwood <kb6ojs@arrl.net>
Message-ID: <MPG.18934386c33d5ae9896d1@newstest2.earthlink.net>
Source record: 35136
Cross-posted to:
alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

This is a Kenwood TS-520SE ham radio transceiver. The SE model uses AC power only. Includes manual and desk microphone.
I have used this radio quite a bit, made several contacts with it. However, some caveats:

1) The 10m high band section has been retuned and recrystalled to operate in the 11-meter band. In order to use the radio on the high end of 10 meters it will have to be retuned. Therefore I will only accept bids from a licensed amateur radio operator.

2) On transmit, the built-in meter indicates a higher-than-normal plate current.

3) The microphone provided is not a standard Kenwood mic, but is wired to work with the TS-520SE and works fine.

Pictures will be provided upon request. (My digital camera -- freebie from Earthlink, you get what you pay for ;-) -- doesn't take very clear pictures, so I will have to take a Polaroid and scan it at work to provide pictures.)

Buyer to pay ACTUAL shipping costs.

Again, if you intend to bid on this radio, you MUST be a licensed amateur radio operator. Proof of license may be required in order to complete the purchase of this equipment.

I accept cash, personal check, money order or PayPal. If paying by personal check, allow time for the check to clear.

The red lettering is original. It is intended as a quick guide to the correct control settings for listening to standard broadcast (AM) stations. That is a fine radio, one of Hallicrafter's best. I just finished restoring mine and the performance is great.

## 519. HELP: Problem with Johnson Valiant.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-19 05:37:48 UTC
From: vfo22@netzero.net
Message-ID: <3e2a3375.170180280@news.five95.net>
Source record: 35142

Hello Everyone,

I was wondering if somebody has seen this problem that I have with my Johnson Vailiant transmitter. I will eliminate any mention of antennas here, and tell you that I am using a lightbulb for a dummy load when this happens. This way we can focus on the transmitter alone, as I know for there is something wrong with it.

When I load the transmitter, the usual 8 ma. of grid current, I key the transmitter and can tune the plate current down to 50 or 75 ma. as usual with coupling adjustment on the low settings (0-6). Each increment above that will result in a little more output. But, when I get to 7 and above, the plate current buries the meter, and the power output jumps up way high. If I turn the drive control down to practically nothing while at this coupling setting, I can get the plate current to come down with it. But, there is little or no grid current drive at all at this point. It seems to get a little tuning action with the final knob, but not much adjustment to speak of when I back it way down like this. Now, I have adjusted the clamper, and it is correct. Also, I have adjusted the neutralizing capacitor for minimum grid current swing. I have cleaned the wafer switch that changed the coupling. The capacitors off of this switch have been changed by the guy who I originally bought the radio from. I do know one thing - the radio did work correctly when I first used it, but since then something has changed, and I dont know what. 40 as well as 80 meters this happens on. One other thing if this may be related. I noticed that I get very little grid current drive out of 20 meters, and virtually none on the 15 and 10 meter bands, but I dont normally use them. I have tested all the tubes on a TV7 tester; but maybe one is breaking down while in circuit? Any suggestions would be greatly appreciated.

Thanks for reading,

Bill

Duh! I'm surprised I didn't see the correlation to the BCB-AM.
Others have noted that the S-53A was made in two versions, some
with or without the red decals. Mine has the red, but they almost looked
as if they could have been applied by the owner. Now, I need to find
some paint to redo the cabinet and panels.

Message-ID: <3E2AE6CA.F03499@erols.com>
Source record: 35048

Bill. one of my Valiants did just this. My particular cure was threefold. I replaced the 6146s with some 6146Ws (only because I have a couple of cases of them), I re-built the output loading arrangement by canning the horrible Johnson lash-up with some doorknobs of close values and cleaned up the course loading and output section of the bandswitch. I also re-neutralized the rig and replaced the plate meter shunt (they tend to change value over time..why?). This cured the problem and the rig is now stable all the way up to 10 meters. I'd like to say exactly which maintenance item was the one causing the problem, but I did all at the same time, being convinced that they were all necessary, sooner or later. Given that you seem to "lose control" of things at the end, it would appear to be a parasitic problem, although you did neutralize it. You might couple a scope and counter to the output and see what the signal looks like and what the freq. is. It may well not be in-band. At any rate, that' s my experience. Good luck with yours. They're nice rigs.

Bill:

Just three suggestions:

1. Use a real dummy-load (e.g. Heathkit Cantenna)
2. Replace the meter shunts with nichrome wire of the appropriate value.
3. Temporarily remove the plate & screen voltage from the 6146s, apply very small drive, and (using a dip meter in the tank circuit) adjust the neutralization capacitor for a dip. If the dip doesn't occur, then we'll need to talk again.

Darrell,

Are you talking about the Star Roamer II version that was available from knight kit in 1971-1972??

I see the abundant Star Roamer on ebay quite ofter, but not the "TWO" version.

Thanks

Jim

No, this is the "newer" version of the classic Star Roamer. Knight Kit put
thisout in 1971-1972 after making this newer version (solid state) of the
venable tube version of the star roamer.

It in not a regen, but a single conversion radio.

Jim

Radio Shack DX-150A general coverage shortwave receiver.
This is the model with the built-in speaker. Excellent working
condition. Shortwave/Amateur table-Top receiver for AM, SSB and CW.
Covers 535 kHz to 30 MHz in four bands. Has main tuning dial and
bandspread for the ham bands. Has AVC, BFO, s-meter etc. Headphone
jack on front panel.

Will sell for $85.00 plus shipping.

Drake TR-3 HF Transceiver with AC-4 power supply.
Very good condition. Front panel looks excellent.
All orignal knobs. Transmits fine. Receive appears to be
a little weak due to first r.f. amp stage.
Comes with the original manual and cables.
Will sell the TR3 for $175.00 plus shipping
Will sell the AC4 by itself for $75.00
Will sell the AC4 with the TR3 for $50.00

Picture at:
http://www.gizba.com/x/sidevalve/radios.htm

E-mail me for more information or to arrange purchase.

Source record: 35065

Yes Jim, I'm talking about the Star Roamer II. (I actually built a tube type Star Roamer as a kid). I've been surprised to see three or four of of the solid state versions show up on eBay in the past year or so. Of course that may be a fluke.I had completely forgotten about them until they began to suface. I don't think they were produced more than a year or two.

Frankly I'm amazed at how many of the original Star Roamers must have been sold. It seems like at almost any given time there are two or three of them up for auction.

Incidentally, most people don't realize that there were two versions of the tube type. The easiest way to tell them apart is by the S-meter. The later version is taller and narrower than the original. The original also has a marking on the meter face for "S" 9 and the later does not.

Regards,
Darrell

...the one I found sez it has am/cw/SSB modes, in distinction to the '1'
(which has only AM but can get SSB with lotsa work, using the selectivity
control).
So, an easy, working (variable pitch or whatever) SSB on a "II", helps.
It's about time!
Most of the ebay completed items star roamer Is were busted.

## 545. FS: Kenwood TS-830S

My fellow radio amateurs...

I'm looking for manual and schematic for Lafayette HA-410
10m AM xcvr. The BAMA doesn't have it. Yes, I am aware
of the many commercial vendors who sell radio manuals. I
am hoping to find a fellow ham who has the information and
is willing to make me a copy "on the cheap", or loan it to
me so that I can make a copy myself. If someone has an
original HA-410 manual, I will volunteer to scan it and
upload it to the BAMA so that more hams can benefit!

Please help me restore this nifty li'l 10m rig...

73,
Dean K5DH

# 552. Re: Info reqd: Solid-state replacements for tube rectifiers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-20 13:38:50 UTC
From: k5dh@raytheon.com
Message-ID: <KZSW9.307$Z74.1166@dfw-service2.ext.raytheon.com>
Source record: 35074

Roger,

Solid-stating the power supply in a BA rig is a good idea in
that it will reduce heat and reduce stress on the transformer.
Something that you must keep in mind is that after you solid-
state your power supply, the output voltage will be quite a bit
higher because there will no longer be a voltage drop caused by
the rectifier tubes themselves. Make sure the components in the
rig can handle the increased voltages, especially the capacitors
(not just the filter caps, but all of the caps).

You can make your own solid-state replacements very easily. Use
the base from an old octal-based tube and install silicion diodes
in it. I'd recommend a minimum of 3 KV at 3 A rating on the new
diodes for safety's sake. I did see some plug-in solid-state
replacements on eBay just this weekend, with an opening bid price
of US$4.95 each. Old tubes are free, and diodes are a few cents
each. I'd opt for making my own.

Cheers,
Dean K5DH

## 554. Question on 240Volt wiring for ham shack

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-20 19:41:09 UTC
From: Raymond Gibbs <R390A@worldnet.att.net>
Message-ID: <phYW9.121107$hK4.9798700@bgtnsc05-news.ops.worldnet.att.net>
Source record: 35076

Hello everyone,

I am finishing my basement, which, of course, includes a special area for my radios and a separate workshop. In addition to having lots of 15Amp 120 Volt outlets, I have having 240 volt outlets put in as well. The theory is that one of these days, I will get a boatanchor transmitter/amplifier that requires 240. My question is, what type of outlets for 240V should I have installed? There are many different choices and configurations with 240volt outlets...I was thinking of using NEMA 6-30R outlets, but I'd like to query the group to find out what would make the most sense....Opinions/Comments, anyone?

Dennis Gibbs

Every thing you get will have a "Different" or "NO" conecting plug on it! Put in one 220 outlet and make sure it is wired correctly, Then use it for all testing. Put another one at the operating position the "Same" as the one on the bench. Then you are all set :-) 73 Sparks W4EAS

Hi Raymond,

My vote would be for a clothes dryer connector. Often the female wall socket is sold together with a 6 foot cable and molded plug at your local hardware store at very low cost.

Heavy duty and rated at 30A (I think) or more.

Have fun!

John VE3PCN

The best option would be to wire the connector for at least a thirty amp service (usually 10 gauge wire), and then you can use the proper breaker and plug for the draw that you need.

For example, each amperage service utilizes a different type of plug / and outlet. If you need 220 @ 20 amps, install the proper outlet (female) and a 20 amp breaker in your breaker box. If you install a thirty or so at the outset, you will probably be unprotected for the load you will be using.

Roger --

Just to clarify Dean's email (very good info therein), plug in
replacements usually do NOT contain any dropping resistors;
in fact, I don't know any that do, so inquire first if you need to.

Source record: 35085

It sounds like either the load capacitor switch has a bad contact or
one of the load capacitors is bad. You don't have enough loading and
the plate current goes way high.

When you turn the drive control down, the clamp tube is decreasing the
final screen voltage and reducing power levels. The clamp tube
monitors grid current. When the grid current drops the clamp tube
conducts and drags the final screen voltage down to protect the finals
if you loose grid drive.

I built a 25 X 35 shop/garage/wallow behind my house. A 200 amp service was installed with 30 amp , #10 wire, run for the 220 outlets and a RotoPhase 3 ph converter put in for wood working tools, shop stuff, and now an SRT-15. Its cheaper to do it at the get go than try to upgrade later. The draw will determine the kind of outlet.

240 volt plugs are different because of there current rating. A 20 amp plug and socket should more than do you. They usually look kind of like the 120 volt plug with the pins of set 90 degrees. They are also usually priced higher for higher wattage.

Hi Mark & Dean,

Thanks for the advice and I'm going to try rolling my own first, using 1N5408 series diodes, that way I'll have the flexibility to add resistors as required.

In the Heathkit DX-100U transmitter I'm restoring, higher HT voltages might be a problem due to the rating of the filter electrolytics but in another AM/TX I'm using a slight HT increase will be to the good, as the 813 PA it uses is under-run at present at 1200V. That TX uses two 5R4 tubes at present (each with its diodes strapped in parallel) for the 1200V and a third 5R4 to give a 600V rail to power the modulator output tubes. I've noticed that the in-rush when the HT is turned on is causing slight sparking inside the 5R4s, so possibly they are on the way out and are not cheap to replace. The US ready-made prices for solid-state replacements are pretty cheap, even allowing for mailing them to the UK and so are worth considering after some experimentation. I've not seen any advertised over here yet, any UK readers know of a supply?

Regards and thanks again,
--

L.V. Transformer
115V AC primary to secondary of 14V at 6 Amps
Potted design with steel case.
Dimensions 4" X 3-1/4" X 4-1/4" tall
QTY 1 available for $24.00

Bias & Fil. Transformer
115V AC primary to secondary of 75V at 30 mA
Also has secondary of 6.1V at 5 Amps
Potted design with steel case.
Dimensions 3" X 2-1/2" X 4" tall
QTY 1 available for $22.00

L.V Transforfmer
115V AC primary to secondary of 22V CT at 2.5 Amps
Potted design with steel case.
QTY 1 available for $12.00

115v Primary / 60V CT at 16A - $65.00

120V and 240V Primary
16V and 32 V at 62A secondary - $125.00

120V AC Primary to 12.6V at 50 Amps - $72.00

120V AC Primary to 6.3V at 50 Amps - $55.00

shipping additional on all.

Other types available - inquire.

FOR SALE:
Plate transformer
115V AC primary - Three secondaries of:
410V CT at 190 mA, 346V CT at 60 mA
370V at 80mA
Potted design with steel case.
Dimensions 4-1/4" X 3-1/2" X 4-1/2" tall.
QTY 1 available for $30.00 plus shipping

STANCOR PLATE TRANSFORMER - Type 92C094
Primary is 117V AC only. Secondary is 2500V CT at approx. 2 Amps -
Taps at 2000V CT
This is a sizeable transformer.
Dimensions: 12" X 10" X 9" tall
Comes in a special steel shipping container
Qty 1 available for $125.00 plus shipping

Bendix Radio Company Plate Transformer
Type A19706 - Primaries for 100, 110 and 120V AC
Secondary 1390V CT at 640 mA ICAS, 320 mA continuous.
Dimensions: 8-1/4" X 7-3/4" X 5-1/8" tall.
Vertical mount with cast end bells, black finish.
Excellent choice for linear amplifier or
for a medium power AM or CW final.
QTY 1 available for $45.00 plus shipping

Raytheon TF15X02YY with 120V Primary.
Secondary is 1100V CT at 360mA ICAS, 180 mA continuous.
Dimensions: 3" X 5.25" X 6.5" tall.
Potted, encased case with four mounting studs.
Will sell for $32.00 plus shipping

ADC Co. (AVCO-Crosley) model TF4SX03KA
Has 120V AC primary and two secondaries.
Sec A: 1050 V CT at 150 mA ICAS, 75 mA continuous
Sec B: 5V at 20 A
The dimensions are: 3.5" X 4" X 5.25" tall
Will sell for $25.00 plus shipping

>it! Put in one 220 outlet and make sure it is wired correctly, Then use
>it for all testing. Put another one at the operating position the
>"Same" as the one on the bench. Then you are all set :-) 73 Sparks

Alternatively, just install lots of 120-volt outlets with alternating outlets on the other "phase" (I'm using the word "phase" loosely here); then, when you need 240 volts, make yourself a special cord with two plugs and plug it in twice, so to speak. This gives you more 120 outlets (which are used more often) AND cheap 240 when you need it.

I'm just finishing a new basement with studs on 2-foot centers; I have an outlet at EVERY stud: one on phase A, one on phase B, and the third for phone and data connections (this doesn't count the UFER-ground boxes about every 12 feet). When the electricians saw my layout, they muttered something about having to return to the shop for more outlet boxes!

Date: 2003-01-21 22:45:12 UTC
From: w3nlb@amsat.org
Message-ID: <gnir2vkgi9rtr3lucm5943hpgf6vnfm7kt@4ax.com>
Source record: 35000
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I'm working on a Kolster K-43 for a customer. It has a circuit that I've never seen before, possibly after-market.

The radio uses push-pull 45s for audio output. Each tube has a fiber wafer slid over the pins with a single electrical contact to pin #2 (plate).
Each pin two is connected by a wire to a control (potentiometer?) mounted on the lower right side of the cabinet (floor model).

I don't know what this thing does, how to test it or anything else about it. Any thoughts / suggestions would be appreciated.

TIA

73 de Leigh W3NLB

## 578. Need help with Kolster

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-21 22:45:58 UTC

Message-ID: <06ir2vc7dd1fos2rr2u612b5aspgn4vb5b@4ax.com>
Source record: 35001

Working on a Kolster K-43 for a customer. This unit has what appears to be an after-market hum balancer???? I've never seen anything like this.

The radio uses push-pull 45's. Each tube has a fiber wafer under it with holes for the pins and one electrical contact to the grid (pin 3).
Each grid contact goes through a wire to a control mounted on the lower-right side of the radio. No other connections to this circuitry.

Any ideas what this is, where it came from, how I should check its operation, or other useful hints???

TIA
73 de Leigh W3NLB

## 579. fr 149 usm 159 frequency meter

Newsgroup: rec.radio.amateur.boatanchors

# 581. FS: Triplett Frequency Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-22 01:34:47 UTC
From: AnonAnon <sabbatai_zvi@hotmail.com>
Message-ID: <06tr2v8tuo0edrs7sciets4t8l40q5832e@4ax.com>
Source record: 35004
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

FOR SALE:
Triplett Model 3256 Frequency Meter.
This appears to be an absorption wave meter.
Shaped very much like a grid dip meter.
Has two ranges. One band covers 80 and 40m and has
the calibration markings for these two bands.
Other band covers 14 through 30 Mc with markings for
20m, 15m and 10m bands.
Has a switch to select between the two ranges.
Neat little gadget measures 5-1/4" long X 2-1/4" X 2-1/4"
plus a coil extends 2-1/2" out the top.

Has a very nice Triplett 0-1 mA meter built in.
There is a headphone jack on the front for monitoring detected
signals. Signals are coupled into the unit by inductive coupling to
the coil. Can be used for identifying, monitoring and tracing RF
signals along transmission lines, in tank circuits etc.

Condition of the unit is very good. Gray hammertone finish over copper
plated steel chassis-cabinet.

Will sell for $18.00 plus shipping

Reply by e-mail to arrange purchase

From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <CNxX9.6183$bL4.618335@newsread2.prod.itd.earthlink.net>
Source record: 35011

I have for sale a Knight-Kit T-150 Transmitter. It is incomplete in that it does not have a cabinet and all of the tubes are missing except one 6146. The knobs are original and all there as is the VFO and major components. The Front Panel has one extra hole where someone mounted an additional switch. This is a 150 watt input AM/CW rig from the 50's. I have a copy of the schematic and Operating Instructions. I think that with a little work this rig could be back on the air. Price is $45 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

Lotsa "RCA International" discourse over years, but here's a new twist.

Looking @ a pretty standard 3-way portable for 110V countries.
Tubes are 1AB6, 1AJ4, 1AH5, 3Y4 instead of USA usual. Says Made in Japan.
BC and 3.8-10.5 mc. NVC

Think NVC means Nippon Victor Corp. Perhaps predecessor of Japan Victor
Corp. Warning, guesswork!

Tidy little critter, anyone else ever land on one?

Well, now it sounds like it's between the grids, not the plates. But my previous posting still stands -- tone or volume. BTW, this posting should be in rec.antiques.r+p, but I'm seeing it (and therefore must reply to it) in boatanchors group. My newsreader won't tell me if it's cross-posted. --Mike K.

If there is a capacitor somewhere in series with the pot, then it's a simple tone control. Otherwise, it's a REALLY simple volume control. But then, I once had a Kolster that controlled volume by varying the B+ to the RF amp strip, and another one that varied the filament voltage to one of the RF tubes (just like a battery set).

So I wouldn't put this aftermarket volume (as opposed to sensitivity, as both my examples above are) control beyond Kolster or a retro-fitter. --Mike K.

Did you get it? I'm a little confused by Motorola, as I had bought some assets from a radio/paging company that went out of business in Georgia that included programming software for about 60 Motorola Models (including the model you're looking for). I offered the CD I made of it all for $53.85 by Paypal, but Motorola made me take the offer down. Yet I see requests for this software all over the place, and if you do a hotbot search for "motorola programming software" you'll see at least a couple of overseas outfits openly distributing it over the internet! Anyway, I was just wondering if you got it, or got a threatening note from Motorola about it? I know I'm kinda peeved at sitting here with this stuff on this disk that's useless to me, that I paid money for, and I'm told I can't get my money back.

Good guessing, the JVC corp. products were often marked JVC-Nivico
(Nippon-v.c.)
I've never heard of 3Y4, btw. Probably a Japanese type..What were the
tubes' factory marks?

Hi Mike,
Thanks for the follow-up. I've certainly never encountered such an animal before. I posted two different questions, and this one is in error. The connection is actually between the two plates (pin 2), not the grids. It must be a tone control of some sort.

As to the selection of NGs, I posted it here and in r+p since, as an aftermarket product, it might have been used in amateur receivers as well as consumer equipment.

Two Eddystone Connectors (spring loaded) . These are very, very rare and are in unused condition. They fit a variety of Eddystone Receivers used as aerial or earth connections etc. Because of the weight and build of Eddystone Receievers, people usually pick them up with the handles and lean them back breaking these connectors on the rear. If you are an Eddystone collector and or restorer you'll know how very rare you see these and how difficult they are to obtain

Not too critical. RL Drake used about three different paints during the manufacturing run of the
rig. Any flat matte black finish will work nicely. It does not have to match any of the other
cabinet pieces which are all annodized aluminum heat sink rails. The bottom is unfinished sheet
metal.

Steve

## 618. HW-8 help

Newsgroup: rec.radio.amateur.boatanchors

Hi OM's,
Great newsgroup. I need some help troubleshooting a HW-8 I bought off of eBay. It has output on all bands. Receive is OK on all bands but 20M, which has a horrendous hum (it's like a DC hum, too loud to be common-mode hum). All the other bands sound fine on receive. Any ideas as to what to look for? Please email me with pointers at: w4udx@juno.com Thanks!

Mark W4UDX

From: "NO***SPAMcaustic NO_SPAMseattleu.edu"
Message-ID: <3e30de36.32811169@news.qwest.net>
Source record: 35043

Hey all, I was wondering if anyone could help me out with a small matter. I happen to have ditting on my desk an old Roller-Smith Kilowatt Meter, that has a range of 0-300KW. What I would like is to somehow set this meter up to show Watts, but not Kilowatts. In essence, I would like to scale it's measurement by a factor of 1000. Now, this thing is rather beefy, and there are a whole heck of a lot of connections on the back.

If anyone has any ideas of a simple scaling circuit, that would be great! I was thinking of either using it as a meter for an amp, or just to put on my computer. I'm not sure which yet :)

Joe

Prior to Heath's Death in a airplane crash the Heath company sold
Airplane kits to build your own airplane. This was back in the late
1920's and into the early to mid 1930's. Some of their products were the
Heath Parasol, a mdwing conversion for the parasol, a biplane glider
based on the Parasol. Heath also built a race plane called the Baby
Bullet that set recoords for it's time.

Look for short to ground of AGC line. Should be very high resistance
in AGC on mode.

## 639. DX-100: Searching for a particular Heath DX-100

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-25 01:17:58 UTC
From: Bill Beal <bbeal@hilcozap.net>
Message-ID: <aBIY9.4$s0W5.393298@news2.randori.com>
Source record: 34912

I am trying to locate a particular Heathkit DX-100. It belonged to my father and had been loaned to the Univeristy of Arkansas Amature Radio Club, W5YM, in the early 70's. It disappeared from there in the mid-70's; probably just removed because it was a boatanchor (I should know I helped carry it to the club shack which was in the penthouse on top of one of the school buildings)and no one knew who to contact about it. The transmitter may have my fathers call sign, W5OXL, "engraved" somewhere on the case. I seem to remember that it may have had a crystal socket mounted in the front panel though I am not sure. This radio was also my first transmitter as a novice. If you know of this radio, I would be interested in contacting you or whoever has it.

Thanks,

Bill

Dennis,

I gave up a long time ago and just built me a multie outle box for each 220 drop I put in. No matter what kind of recep. I would wire in and swear would only be used for one piece of gear 2 weeks later I am cursing because I Can't plg something else in therte instead. Go down to your local harware store and get one of each with the current rating of what you have available. Install the lot in one box and use only one at a time. This is the only way I have found not to hate myself 2 weeks after dropping a new line.

Source record: 34915
Cross-posted to: rec.boats.paddle.whitewater,rec.boats.racing,rec.boats.racing.power,rec.boats.sailing,rec.models.rc.boats,rec.radio.amateur.boatanchors

Alright I have been sailing catamerans for over 15 years. So this hull idea really interest me. I would love to see something practical that could outrun my Tornado. It seems to me you are going to experience the same problem as the hobie catameran to the extent that turning it with the flat shape of the outside of the hull is going to resist a change in direction. So how do you get by that. Is it designed for roll tacking or what?

# 644. DX-100B AM/Phone Switch

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-25 03:46:49 UTC
From: Mark Bell <bell@blazenet.net>
Message-ID: <v342j6tn3j0f31@corp.supernews.com>
Source record: 34917

Gang --

Work on my DX-100B is progressing nicely.

Discovered that the AM/Phone switch is cracked in
half. I removed the switch, and disassembled the beasty. After
rebending a contact, it looks like it should go back together again
nicely.

Q1: What the best way to glue it ? Epoxy? Someone suggested
superglue.

Q2: Is a fix of this kind worth while, or will the switch just crack again?

Looking further at this, I though of the following. First, glue the pieces
together (Epoxy, superglue ?). Afterwards, run a length of bare wire across
and through the two holes on either side of the crack (which depends on
where it's cracked, and I can do this
on mine). Then, put expoy in the holes and along the wire. This would
provide a kind of clamp assembly. Comments?

## 650. FS: Misc. vintage Military radios.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-25 06:52:52 UTC
From: m38 <m38@cox-internet.com>
Message-ID: <v35mcqd1hf3oba@corp.supernews.com>
Source record: 34930

I have the following for sale. Some I have had a long time and some is
estate stuff:
RAX-2 military receiver, 1.5-9 mhz, $185.
ART-13 w/dynamotor, LF osc. plugin, less top cover, $250.
ARR-7/R-45 receiver, works, $175.
LS-3 speaker, brand new out of box, $95.
TMC-CV-591 SSB converter, less cover, $175.

## 651. FS: Vintage transmitters, etc.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-25 07:11:27 UTC
From: m38 <m38@cox-internet.com>
Message-ID: <v35nflf8hppp49@corp.supernews.com>
Source record: 34932

I have for sale some other estate stuff:
1. Johnson Ranger II transmitter, manual, probably an 8.5, complete and doesn't appear modified, lights up but untested and as-is, $425.
2. Heathkit DX-100 transmitter, original manual, 90 % of the original copper showing, untested but lights up okay, about a 9+ front panel and cabinet, $225.
3. Lafayette HE-45B 6 meter transceiver, AM, original mike, probably a 9+ in appearance, $75.
4. Gonset GSB-100 transmitter, manual, new dahl transformer installed, untested recently but worked perfect when I used it a couple of years ago, a good 9.8 appearance, $225.

## 652. FS: Vintage microphones.

>posted two different questions, and this one is in error. The connection is >actually
>between the two plates (pin 2), not the grids. It must be a tone control of >some sort.

OK, that's what I think too. It would work just as well (and be safer!) between the grids, but would have picked up lots more hum there.

>As to the selection of NGs, I posted it here and in r+p since, as an >aftermarket product,
>it might have been used in amateur receivers as well as consumer equipment.

True. I no longer read R+P since there's too much traffic on it, much of it "11-meter" fights if you get my drift. BTW, many early Ham receivers did have tone controls, right up into the National NC-173. Then at some point there was this big split between Ham and SWL gear, and ham radios seemed to take pride in weak, distorted, and unadjustable audio. 73, Mike K. AA1UK

For what it's worth, Win95 doesn't run DOS programs properly.
You probably want to locate a copy of MS-DOS 5.0
The most stable one in the bunch.

## 678. Henry 2K bandswitch help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-27 03:55:37 UTC
From: thompson@mindspring.com
Message-ID: <b12a9l$f2q$1@slb2.atl.mindspring.net>
Source record: 34951

I have an old Henry 2K Serial #156 Floor Console. This is the old model with coverage of 80 to 10 but lacks the extra position to split 80 between 75 and 80. !2 years ago the bandswitch broke
The central bandswitch actually switches 3 units and is just a switch that was originally braised
on. The switch is connected to dial cord that switches the bands. The weld broke and I super glued it with the same glue you use to hold rear view mirrors on with.

I borrowed a diagram on how to take the Henry apart but have forgotten what to do. I know you can remove the box and RF deck from the power supply chassis after removing the plug for the blower and unsoldering the time delay trip switch. I don't remember how to get into the back of the front panel. I seem to remember the front panel tilts forward (still very tight to get at the hub).
I either want to super glue the hub back on the switch shaft or find a junker with a complete switch.

Any help is appreciated. E-mail me directly at thompson@mindspring.com.

73 Dave K4JRB

A few programs written for earlier versions of DOS don't work under later
releases.
What you really want is the version these shack programs originally ran under.
But it wouldn't hurt to start with an advanced version like 5 or 6.
7.0 is what they call the version built into Win95. It is a complete MSDOS,
and has run old programs OK for me. --Mike K. AA1UK

Remember that breaker and wiring is there for one reason and one
reason only...To prevent fire. It is not there to protect the
equipment although 90% plus believe it to be so.

The breaker is not there to protect the load although most of us hope
it will.

I actually have two vintage Westinghouse ST-35 0-10A ammeters
available right now. I'm hoping to get a few more, once my U. cleans
out an old storage room :). Round Bakelite body, Glass face. One comes
in it's original box (with a westinghouse data sheet!). 3.5"
diameterback, the glass face is 2.5" in diameter. Once I get my
digital camera back from a friend, I can take some photos. Make me an
offer for 'em.

# 695. Strange problem with RA17L, V8 and 37.5MHz BPF

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-27 16:06:19 UTC
From: la8ak.xnd@online.no
Message-ID: <3e35451b.48868684@news.online.no>
Source record: 34968

Hi

LA7CC has a difficult problem with RA17L where amplification in V8 is very low - about 1/10 of what it should be compared to a douzen other RA17's he has repaired. He changed the valve, capacitors and resistors around it, but still low gain. It is possibly fault in the 37.5Mc/s B.P.F

Wonder if somebody else had similar problem?

No. As much as I'd like to have an RA17, I don't -- yet.

When I have a strange problem that isn't responding to the usual troubleshooting procedures, I tend to get out the manual, measure voltages (power-on, of course) and resistances (power off and disconnected, capacitors discharged) from each pin of the tube to ground, and then compare to the values shown in the manual -- if the manual shows such things.

I know my R-390 manuals do, and I hope the RA17 manuals do. If the RA17 manuals don't, maybe someone will provide "typical" readings for the area in question.

I might also get out the 'scope and have a look at signal levels and DC voltages with a signal generator feeding the input.

I have for sale a Heathkit SB-200 HF Amplifier. It is dirty and has no tubes or feet, but is complete otherwise. I am selling this for a friend. It has been stored in his garage for years. Needs a little TLC, but nothing major wrong with it.
Price is $175 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

Probably true. Win98 is the last verison of WIndows to include a true complete MSDOS and be able to run many DOS games, and SE (Second Edition) is the last version of 98, with lots of upgrades and fixes.

Win98SE is what I have here, and it's been pretty solid. But some devices may need their Win95 drivers updated off the Web, like my Zip drive. --Mike K.

tnx reply
well I rec'd the reply from Marco IK1ODO:
>tell LA7CC to look at the silver-mica capacitors in the 37 MHz filter.
>Even if they have no DC at the ends they may be lossy (high tgD).
>It happened to me some time... everything tunes but the losses are too high.
>I think to have repaired about 130 RA17s....

several of my friends mention problem with SM, and styroflex, the
first gets erranous and the second shorts

was it R-390 which had particular problem with 6C4 mixer noise?

# 707. Boatanchors For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-27 23:51:16 UTC
From: Joel Levine and Barbara Pickell <WB2BMH@optonline.net>
Message-ID: <UBjZ9.411733$FT6.81439785@news4.srv.hcvlny.cv.net>
Source record: 34980

Hi:

I have the following items for sale. Due to their weight, these items are available as pick-up only on Long Island.

Email for pictures if you are seriously interested. Please, no tire kickers, it takes time to send emails.

1. Hammurlund Comet Pro --working with three sets of plug in coils
2. RCA ARC 155 -- very clean and works well
3. Hallicrafters HT-6 -- working with coils for 3 bands-
4. National NC 2-40 missing legs and front panel chrome trim--not tested
5. National RCE (Airport version of NC100) --works but volume low
6. National NCL 2000 Linear Amplifier--works
7. RME 45 with matching speaker-- works but looks repainted
8. Two 19" rack cabinets, Equipment height --one 9" and the other 25"
9. Yaseu FTDX 560-- not working
10. Galaxy 300--very clean and working

These items are shipable:

11. Two coils sets for FB7/X Set B and 40 meters hamband sprea
12. 5 SW3 coils (not sets). Three are orphans with no mate and the other is marked 65 ot 115 meters with the notation NG (no good?) also 1 set for 2.5 to 4.5 Mhz range. I do not have an SW3 to test these coils.

Thanks

Joel WB2BMH

You're going to load 98 or ME on a P60 with 8MB of RAM and a
420MB hard drive?

I'm going to load up just such a machine with MY CD copy of
WIN 95 B. I have a buttload of 8MB DIMMS for it.

The 'puter was free. I can always find a home for it.
I just might hook it up to my network and hook a printer
to it in another room...

Anybody want a 486DX/2-66? VLB video and I/O. 20MB of 30
pin SIMM. Must be 4-4MB strips and 4-1MB strips in there.
Soundblaster with MKE CD ROM is extra. ;->

Its a joke on the first book many of us older people learned to read from.

Dick and Jane were a boy and girl in the reading book. It starts off
something like:
See Dick, See Dick run.

I have been thinking of building a tube receiver based on Harry
Lythall's general coverage receiver. I would like to add AGC to it, and
I am considering using the detector and AGC from the ARRL 1969 manual
used in the advanced 6 tube receiver. I am wondering if any one has any
comments on this circuit?
Thanks,
Bill Higdon

FWD:wanted: this WWII radio gear

PLEASE CONTACT THE PERSON BELOW:

From: jason.green@ps.ge.com

I'm looking for the following radio stuff:

1. FT 237 mounting bracket
2 BC 604 Transmitter
3 BC 603 Receiver
4 BC 653 Transmitter
5 BC 652 Receiver
6 FT 253 Mount

Does anyone have any of these radio componets for sale or know of any
place
that has them. I've tried Fair Radio with no success. Thanks

jason

I like to ask the "Computer experts", What was the code for setting
up a hard drive with debug, and seeing the blank stares. So much for an
IT department. :) I rebuild and sold a lot of XT and PCs, and went
through hundreds of used hard drives to test them using Debug. It was a
good idea to do a half dozen or more machines at once, because it took
so long to do a machine, and if one failed you stuck in another drive,
and started over. BTW, I still have a few 10 Meg Seagate SA-1004 8"
hard drives that predate the ST-506 interface. Geeky enough?

Hi fellow Amateurs,

Just created, for Hams only, a brand new Classified Ads Site. Totally
FREE.

Send your ad to over 1500 other sites with one click.
Many categories. Take a look, tell your local hams and radio clubs.

http://cybertechworld.com/ham.htm

Oh and one other thing.....Have a great Christmas and take care.

73, Lee, VK4CXX
Brisbane, Australia.

Yours Sincerely,
Lee Asher
Brisbane, Australia

Message-ID: <morc3vg91po1832euqpqj7ogti6ekdf0q9@4ax.com>
Source record: 34871

Had a look at this site. Seems full of ads for web scams and requests your email address. I wonder if it is just a mechanism to collect ham email addresses for spam?

Here in VK we already have an excellent web site for hams that includes free ad hosting for buying and selling ham stuff. It is free to VK hams and has no commercials. we hardly need another. Thanks for the service Allan VK2NNN!

Simon

## 749. Newbie Using Rigged BrookTree Tv Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-28 13:07:50 UTC
From: Conarch@surfbest.net
Message-ID: <33fcdf31.0301280507.30e5651c@posting.google.com>
Source record: 34872

Im new to the field (I didnt even know that my tuner could recive unprogramed frequencies 'till last night) and I am wondering if anyone knows any techniques/equipment that I could use or get to strengthen the signal Im recieving. I know that the tuner can intercept information (for lack of a better word) in the 1mhz - 1 ghz range. Im planning on building a new antenna later on tonight. Using this equpment, what success should I/will I have? Thank you for replying.

Yes you are!!! I like to ask the "Computer experts" how many 16 bit
slots are in an XT. Actually, debug ran a routine in ROM that did
the low-level format. Fdisk and Format are the only two steps most
ever see these days.
```

# 751. Re: Info reqd: Solid-state replacements for tube rectifiers

Newsgroup: rec.radio.amateur.boatanchors

Roger,

Just use 5R4. Solid state will increase your B+ and will not be in keeping with the spirit of the old boatanchor technology. Plenty of new and good used 5R4 out there. If you are bound and determined to go SS, just get an octal socket and two silicon diodes. Solder it up and you are done.

Just so! Linux or FreeBSD or NetBSD or OpenBSD, depending on just
how paranoid you are and in what direction. With two Ethernet
cards, such a machine makes a _really_ fine firewall. If all you
have now between you and the Internet is your cablemodem or a
dial modem and phone line, then you _need_ to put a firewall
there.

Sorry, troops, but a glowbottle 'puter that could do this would
be a bit large, warm, and failure-prone, and it's really hard to
build fault-tolerance into something that big without making it
_lots_ bigger.

tnx reply
well I rec'd the reply from Marco IK1ODO:
>tell LA7CC to look at the silver-mica capacitors in the 37 MHz filter.
>Even if they have no DC at the ends they may be lossy (high tgD).
>It happened to me some time... everything tunes but the losses are too high.
>I think to have repaired about 130 RA17s....

several of my friends mention problem with SM, and styroflex, the
first becomes intermittent and the second shorts

was it R-390 which had particular problem with 6C4 mixer noise?

No, its not, but 95 only installs part of DOS. You have to do a
separate install of the rest of the files.

Stop e-mailing me. I did not start this thread, and your sorry ass
is why I don't go to rec.radio.swap that group is nothing but a moron
pissing contest that I don't have the time to wade through. If you are
too stupid to ignore this, or any other thread that you dislike you can
just go back to sleep. People like you give hams a bad name.

Crosspost to enough groups?

Why not just use MS-DOS 6.22, FreeDOS or Linux with dosemu depending on
how demanding the exactness of DOSiness you need.

MS-DOS 6.22 should be $5 or less now days. Win95 is still about $25 on
eBay and the like. Linux and FreeDOS are free with no moral issues like
warez copies of Microsoft OSs.

From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <ISUZ9.2857$wd2.223794@newsread2.prod.itd.earthlink.net>
Source record: 34810

I have for sale a Knight-Kit T-150 Transmitter. It is incomplete in that it does not have a cabinet and all of the tubes are missing except one 6146. The knobs are original and all there as is the VFO and major components. The Front Panel has one extra hole where someone mounted an additional switch. This is a 150 watt input AM/CW rig from the 50's. I have a copy of the schematic and Operating Instructions. I think that with a little work this rig could be back on the air. Price is $45 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

Source record: 34814

Going thru my junk box I found an small 2 1/2" by 3" envelope marked HUGHES DIODES Type MP 3016, Hughes Aircraft, Semiconductor Division, Culver City, CA. I think the MP means matched pair. Inside are two pretty standard looking glass diodes like the old 1N34, 1N60 but they are color coded brown, white, gray meaning ?1N198. My search for MP 3016 or 1N198 reveals nothing. I wonder if they're audio, video or lo microwave. Does anyone out there have any info?

## 796. Re: Hughes germanium diode ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-29 23:06:31 UTC
From: John Mackesy <mack@melbpc.org.au>
Message-ID: <b19mss$cnh$1@possum.melbpc.org.au>
Source record: 34819

According to my 1978 Semiconductor Diode Data Book, a 1N198 has a PIV of 80V, min forward current of 4 ma @ 1V, max forward current of 30 ma and should be .105" dia., 1.0" long and leads .020" dia.

There's no application data, but my guess is that it's a mixer diode.

Nothing on MP3016.

John Mackesy

well, not quite. See http://www.circuitarchive.co.uk/heath.htm

DX-40 and DX-60 have controlled carrier, as has the Starflite
transmitter (used it 35 years ago, before I got HX-20), and this seems
to be the only schematic I could find, no good explanation seems
possible.

The ARRL '62 handbook mentions the theme on pp291-292, and the same is
found in the '68 handbook on pp245-246, but not much schematic is
shown, only the clamping tube type which isn't what I am after, quite
different from TR-4, DX-40 and DX-60. In DX-100 it is also the normal
clamping tube (6AQ5), but not for modulation

So I still miss the explanation for the type using the dissimilar twin
triodes like 6DE7 or 13DE7.

in 1965 ZS1MW (Radio ZS 1/65) describes another for control grid, but
I was interested in connecting to the screen grid. One problem is that
6DE7 or 13DE7 are not commonly available here, so we might have to use
a triode pentode, but then we must know how it operate, information
about the voltage swing, is it compressed on the lower cycle

RL12P35 seems to use comparable screengrid voltage to 6146, max 200V.

# 803. HP-608 signal generator

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-30 03:27:11 UTC
From: pdrunen@aol.com
Message-ID: <20030129222711.29251.00000327@mb-cf.aol.com>
Source record: 34826

Hi Group,

Any one remember the HP-608 generator?
I have one and fired it up the other day, I generally fire it up a few hours every few weeks.

I had a project thought to use the HP-608 to relay re-transmit some 10meter AM collins net from the shack to the next room.

The 608 has an AM input and I have a scanner that will run AM mode so I fired it up and tuned in the 608. In the AM mode I could hear a small rumble noise, it was not as much detectable in FM mode.

Just wandering if all 608 generated this noise or where I could go to fix it. This 608 has a old computer fan added to it by previous user.

Also, anyone recall articles about this old horse?

Thanks,

Paul

"Run" as in "execute", silly.

Back in those days, there were several programming 'languages' that
"compiled" the source code in to a compact representation, and which
required a "run-time interpreter" to actually execute it. This provided
for 'hardware independance, because you could move the "compiled" programs
to any system where the 'run-time interpreter' had been implemented.

A couple of the better-known examples of this approach were "Business Basic",
and "dBase".

Both of those languages provided a MS-DOS program called "RUN.EXE" which _was_
the "run-time interpreter". You really _did_ do things like "run invoice.prg".

>Remember the big upgrade with WIN95? Being able to
>download a file and send it straight to the floppy drive!

I could do that under DOS 1.1, using the KERMIT comm. program.

I even did it on machines that _did_not_have_ a hard-drive. Sometimes I was
writing to the 'current' floppy, sometimes to the 'other' one (when the
machine was "loaded" enough to have *TWO* floppies, that is. yeah, once
upon a time, that _was_ a "high end" machine :)

I had to write a special program to do it on a "PC jr", because _that_
box was deliberately crippled and couldn't service the serial-port
interrupe _while_ writing a sector to disk. Thus, had to do an [XOFF]
before issuing the disk write, and an [XON] after it finished.

The _really_ funny one was to, in a computer *store* -- praticularly one
like the computer department of a Sears (where the help usually was *not*
terribly computer-literate -- set the prompt to the 'screen erase' sequence,
after making sure that 'ansi.sys' was loaded.

It was simply _amazing_ how many supposedly "knowledgable" salespersons were
utterly unable to cope with, and/or "fix" that particular "gotcha".

I never used a DTC drive. I looked through an old reference just now though, and it looks as though DTC used the same command as Western Digital.

IIRC, the original 10meg drive that came with my XT used the command g=c800:1

It's been too long that I don't recall the difference between the :1 or :5 part of the command, and can now find no reference to the :1.

I still remember "upgrading" to a 30meg drive that cost me a fortune (for me) of $300 at the time, and hearing the steady click, click... as the stepper motor slowly rotated during the low-level format process.

I have a better idea. in three parts:
1) why don't you *stop* posting in HTML, since it just makes your posts
an average of *FOUR*TIMES* larger than they need to be?
2) recommend you learn to use the 'killfile' capability of your newsreader,
so you can pre-emptively 'ignore' threads and authors that bore you.
3) recommend that the rest of the world consider using _their_ killfile
capabilities to 'ignore' those with their nose so bent out of shape
about a little humor.

I'll start.

*plonk*

( that's the sound of an author's name hitting the the 'kill file', Murray )

Neither is MS-DOS (it's merely a 'glorified progam loader').

It is said:

"Windows is a 32-bit graphical interface,
for a 16-bit extension,
to an 8-bit operating system,
written for a 4-bit processor,
by a 2-bit company,
without 1 bit of skill in what they were doing."

Methinks the description is somewhat _generous_.

I had the loaded XT with 2 360K floppies, 20MB ST225, multi I/O card,
CGA adapter and CGA monitor. I had a 286-12 with EGA and a 40MB ST4051.
I had a 386DX/40 with 2 Maxtor full height 140MB XT1140 drives. The
damn MFM cables would get flaky over time. My first IDE drive bought
around that time was a 1.2GB that cost $250. Being in the business,
I get good stuff at the right price. No Pavilions or emachines or
Dells or Gateways or Aptivas for me. You can buy that sh!t. I won't.

I'm ending this crossposted thread here. Have a gooder.

Some controllers had "advanced" utilities accessible via

-g=c800:8

and the "c800' wasn't necessarily reliable. it could be "whatever"
the base address for the on-board ROM was set as. usually via
jumpers, so you could have more than one controller in the system.

>IIRC, the original 10meg drive that came with my XT used the command
>g=c800:1

*impossible*. the first 5 bytes of the ROM were 'reserved'.

the first 2 are an "identifying signature" for the 'start of ROM'
hex "55 AA"
the 3rd byte is the size of the ROM in 'paragraphs'
the 4th and 5th are a 'short jump' instruction to the start of the
ROM 'power-up initialization' code.

The "POST" bios code scans all 'high' memory, looking for the 'signature'
on paragraph boundaries. when it finds one, it a) does a 'far call' to
{base_address}:3, and b) when that returns, skips over the declared size
of the ROM, before continuing the search for more 'signatures'.

Sometimes there were 'multiple' entry points in the ROM, usually at
3-byte intervals up from xxxx:5. I know I used some that had "advanced"
configuration stuff at xxxx:8.

These days, "I dunno" applies. I don't keep that stuff memorized.

However, consulting my Unix 'termcap' file, it looks like the
requisite magic is:

prompt=$E[;H$E[2J

the first escape sequence 'homes' the cursor (top-left corner),
then the second one does an 'erase from cursor position to end of screen'

I'm not so sure this would pass code and it would require two breakers
for safety. If you dump one side of the line you could still have the
system hot to ground.

>I'm just finishing a new basement with studs on 2-foot centers; I have

I'm surprised if they are licensed they didn't complain.
There is nothing wrong with having alternating circuits, even in the
same box, but suing dual circuits for power is not a safe way to go.
I'd sure make certain they were all GFIs as is every thing in my shop
and all new circuits in the house.

I'm looking for any kind of printed information on
the Lafayette HA-410 tube-type 10m AM transceiver.
Manual, schematic, service information, a list of
what tubes go in what sockets, wiring information
for the power cord and mic, etc. I just bought a
"fixer-upper" HA-410 that has no tubes installed,
no power cord, and no mic. Any help will be very
much appreciated.

If you happen to have an original HA-410 manual,
I would like to borrow it, make myself a copy,
and scan it for upload to the B.A.M.A.

73,
Dean K5DH

I did mine from memory. ESCAPE LEFT-BRACKET 2 J came to mind.

ESCAPE LEFT-BRACKET ; H. That's move the cursor home.

I wrote ansi.sys screens for people back then.

OK. Back to the 21st century. I'm done with this thread.

>

Ground Fault Interupt outlets are problematic when used with inductive
loads like large transformers and even flourecent light ballasts. My
Drake PS-7 power supply trips one on power up. For the time the emag
field is building up, the differential current between the legs lasts long
enough to be detected as a fault.

Steve

I have what's left of a crowbar that has a note on the pcb: "73 mag 8/79". There is an unidentified SCR on the board and a couple of components missing which must have been a pot and resistor in series used to adjust the firing voltage on the gate.

Would anyone have a copy of that issue? It probably has the circuit and component values in it.

I'd appreciate it if you could tell me what the values of those missing items might be.

Marty K1FHR

## 833. Re: HP-608 signal generator

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-01-30 15:35:50 UTC
From: Chuck Harris <cfharris@erols.com>
Message-ID: <b1bgr0$q08$1@bob.news.rcn.net>
Source record: 34757

I don't know about articles about the '608, but I do
know that they are quite microphonic. I can distinctly
remember listening to the output go "Twang!" whenever any
of the switches were switched.

I would bet on the rumble being caused by the fan. It
doesn't need one. Remove it.

This is I think is a homebrew Valve Voltmeter with a Heathkit meter. True?

On the meter itself it says:

Heath (Gloucester) Ltd VALVE VOLTMETER
BACH-SIMPSON LTD LONDON CANADA
MODEL 926W PART NO. 61359

Sadly the meter broke in transit. :c(

I need Plessey Plug with 3 pins. You may know the type, they are metal with collars on for screwing in the sockets. Kind of a metalic grey colour. Military gear tends to have this type of plug and sockets. Anyone know the part number? This three pin I'm after is for a power lead. In fact getting the power leads would be better than my just getting the plugs. If anyone has these plugs or the leads please contact me directly at:

news_emailREMOVETEN@ntlworld.com

Of course remove "REMOVETEN".

I'm near Wakefield, UK, so if anyone has my needs who lives in vicinity perhaps I could collect.

Thanks.

P.S. Plug for the old CT150 Oscilloscope. Right-angled plugs better than straight.

Source record: 34766

I used to own one and have operated several others. Good receivers and transmit audio sounds good too. I have used them in a number of contests (sweepstakes, wpx, and field day) and worked a bunch of dx with them. For $125 you can't go too far wrong. Be sure to check which final tubes are in the thing. If they are NEC brand, those are the original tubes and you should be on the lookout for a spare set of 6sj6c's. You won't be able to find NEC's (unless you are willing to pay through the nose!) since NEC no longer makes them. The tubes from other manufacturers have a little different specs, so a minor mod is necessary in the plate circuit. Just the addition of a silver mica capacitor. I say go for it. I wish I had kept my 101E for a backup. Instead I sold it to a missionary headed for Brazil. Good Luck!

I had posted a thread in a similar vein just recently.

For Euro 240v gear in Mexico I need 240v on one wire with respect to
neutral.
I came to the conclusion that the safest way is to use a 110 - 220v step-up
transformer from a conventional 110v supply.

What do you think?

Adrian

If it is indeed the "early" ( yes, the factory people called it that) model, you may finf the audio a little weak. I have one myself. I added the single transistor audio pre-amp found in the later models (avoiding the error shown in the schematic) and have all the audio I can use, although I have switched to an all-solid-state Alinco to reduce the drain on the battery in my mobile installation. Miki VE7AFN..

Richard,i am quite close to Wakefield,i scrounged the Plugs you are looking
for from Johns Radio at Birkenshaw,i cant remember his tel number but i
would imagine Ken G3SPX will be able to let you have the number.
His number may be in the Bradford telephone Directory under John Townend
Whitehall Rd West
Birkenshaw
.
Cheers,
Terry.

These plugs have many different configurations: The locating
key varies quite a bit. You'd be advised to post a picture
or drawing of the business end of the hole it goes into.

Sure it's not a socket, i.e. female?

AM-6155/GRT-22 FAA Surplus Linear power amp, Specs: 225-400MHz, 50W out (conservative) 10W in, Eimac X651Z/8930 final, extensive metering, can be converted to 2m, 220 or 432, rack mount 7" high, 80 lbs, ITT (model 3212), Part of AN/GRT-22. This Amp uses Emiac X651Z/8930 in silver-plated cavity-drawer; 175-turn TUNE counter dial. Main chassis has solid-state power supply and buffer amp/mulitplier; panel meter monitors voltages. Requires 105/120/210/240 VAC 50-400 Hz and +20 V req 60 ma. +20 V keyed; 7x19x18.5, 80 lbs shipping weight. The HV Supply from AM-6154 is Loaded with GREAT parts to include a 1752V at 270ma transformer, 8HY 300ma choke, 100K ohm 95 watt resistor, 2x5mfd 3KVDC capacitor, & rectifier circuits card. Most hams use these amps as a 2m or 220 Mhz or 432 Mhz Linear. After conversion, the output power is approximately 400 watts. One ham has used a 4CX400A (available from Svetlana)to raise the output power to 450 Watts. Do a Google search of AM-6155 and you will find many references to conversion information. Used - Excellant Condition (NOT TESTED) but sold AS-IS.. Email if you have any questions. Buyer will pay shipping (approx 90 lbs) from zip 31088 and a packing charge of $20.00. I will ensure the item is packed to survive the trip! 73, Larry Keith KQ4BY

Seems a heck of a lot of bother. Probably best to put in a modern socket
and plug.
May do that tomorrow.

The insert can be removed and replaced in the appropriate orientation. Dead
easy. A plug is that which goes on the end of a cord, can be male or female.
The fixed part on the equipment is a receptacle.

John Mackesy

I had the same setup, and sold it last year for $175 plus shipping (two boxes).
I think that was pretty darn cheap, but at the time we negotiated the deal,
there were problems int he tuning capacitor such that I thought it had some
shorts, as from bend plates or metal shavings. Before shipping it, I applied
some DeoxIt to the rotor wipers and got a great-working rig!

BTW mine had the factory mod to replace the 7360 beam tube with a quad- diode
ring modulator.

I think you should ask $250 and haggle from there. It's a really class rig.

I've got a bag full of these. As J says, they come in various
flavours, but it's often just a matter of dismantling and rotating the
innards. If you can e-mail me a close-up, I'll see what I can do.

But unless you're keen on preserving the originality of the equipment,
you may do better to replace the original with an IEC socket (as used
on computers etc.)

> Sure it's not a socket, i.e. female?

One would hope the mains ended up on a female, but they weren't always
too safety-consious in ye olde days (ever heard about the 200V DC
mains model train sets!)

Try Heyboer Transformer Inc. at 17382 Hayes Grand Haven, MI. 17382 phone 616-842-5830. Send them the defective transformer, they will rewind you a new one and in most cases use the same shell so you can't tell it from the original. I had them build me transformers for several hallicrafters projects and have been very pleased. The most complex one was for my HT-9, it only cost me 65.00! hope this helps.

Im 95% sure that was the color of the matched balance modulator diodes
Heathkit used in the HW-101 and SB-Series.
If so Pretty rare item today !

I was under the impression that John Townend shut up shop, auction his stock
and retired last summer. Can anyone confirm this?

I've recently purchased several 3pin Plessey mkIV mains leads from Colomors.
these were NOS and cost approx £11 each. Not cheap but then again, it's
only money:-)

Regards,

Steve

Thanks all for the information. The crowbar came out of an old 12V supply I put together many years ago and I'm planning to dust it off and use it again. Circuitry is somewhat similar to what Gary describes; but it was set up to blow a fuse.. I'm not sure why those parts were removed; I must have cannabalized the board way back.

Sieb, thanks for the offer but I now have all I need with the values in Gary's note.

Tonight, when I was scanning the ebay listings under Hallicrafters, I saw an ad for a 3 tube upgrade kit for the SX 42. It consists of 3 tubes and instructions only and is said to increase sensitivity without damaging the rcvr. Does anyone on the list have any knowledge of this "upgrade" Thank you in advance. 73 Mike KF6KXG

## 889. Help ID driver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-01 11:18:21 UTC
From: Netnews Marty <marty@aa4rmHarvestersbegonE.org>
Message-ID: <EL-dnR9LSPNgMaajXTWcpg@giganews.com>
Source record: 34662
Cross-posted to: rec.audio.tubes,rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I've what appears to be a sizeable tweeter driver. Perhaps a theater unit.

Has about a 4" square flange-mount through which projects two brass
screw-type connection posts.

Permananent magnet is a round structure about 1.5" thick X 3.5" diameter.
The unit's a painted light-gray color.

Diaphragm seems to be bakelite. Voice coil DC resistance is 5.5
ohms & ohmmeter contact brings out reassuring scratchy sounds

Box is ink-stmped 1289A and someone once penciled HC32A and HB10A
on same.

Help sure appreciated

Marty

I have a real old, antique wavemeter made by General Radio Corp, Cambridge, Mass. Consists of the main tune unit with four plug in coils. I have pictures on request if interested. This unit is fair shape and would make a good bookend. Accepting offers and I am easy to get along with. A good piece of test equipment for the antique collector.
Regards
Gary...WZ1M

Hi fellas

I am about to purchase a Kenwood TS520 and was wondering if there is anywhere i can download a copy of the operators and/or service manual. It seems that there are places that will sell them at a premium but i was hoping not to have to do that. I am mainly interested in the transmitter tuning procedure as it has been years since i had a valve transmitter to tune. Any help would be greatly appreciated. My email if anyway can help is tstone12002@yahoo.com.au

Cheers

Tony -- try URL:
http://hamradio.online.ru/sch_eng.html
I haven't downloaded anything myself from there - so not sure how well it
works.

Also Sams may sell a manual reasonably or any of the vendors at URL:
http://ac6v.com/manuals.htm
At least one of them there has the service manual for $23
But postage to VK may be prohibitive

I would.

>The insert can be removed and replaced in the appropriate orientation. Dead
>easy. A plug is that which goes on the end of a cord, can be male or female.
>The fixed part on the equipment is a receptacle.

In my book a plug has pins which mate with a socket. E.g. a
3.5mm stereo jack plug and its corresponding 3.5mm stereo socket.

It's rather dodgy to have mains on a plug.

No first hand knowlege, but he might be selling sharp cutoff tubes as a sub for the remote cutoff tubes in the SX 42's IF amps. I expect this would make the radio more prone to overloading on strong signals, without actually increasing weak signal sensitivity.

Frank Dresser

Since you seem to be trying to equip the Ham bands (in an RX originally xtaled
for SWL bands), maybe you could scrounge the xtals from someone's junker
organ-donor Ham-band R-4. Or trade your SPR-4 for an R-4, unless you want both
SWL and Ham coverage in the same unit.

I have an R-4 that I may sell or trade soon -- it works well, but takes a long
time to warm up, like maybe on of the LO tubes is weak. --Mike K.

>No first hand knowlege, but he might be selling sharp cutoff tubes as a sub
>for the remote cutoff tubes in the SX 42's IF amps. I expect this would
>make the radio more prone to overloading on strong signals, without actually
>increasing weak signal sensitivity.

I'd expect the replacements to go in the RF amps, not the IF, and maybe the mixer. The original RF amps are 6AG5, probably better than the 6BA6 that everyone else was using (and kept on using (e.g., SP-600) after better tubes were available). But replacing with a 6CB6 or 6DC6 or 6HS8 cascode might soup up the front end quite a bit.

The original Loktal dual triode osc/mixer is cool looking and a break with traditional hexode or pentagrid mixers, and the right way to mix at high freqs, but here again more modern tubes (even the venerable 6J6) might be "hotter."

I agree that putting sharp-cutoff tubes into the RF stages (well, maybe the 1st RF would be OK) is asking for overload and cross-mod troubles.

There are front-end mods for the 75A4 that have been reported to make a world of differene in S/N, and that's a later rx with later tubes to begin with, so I'm not surprised that an SX-42 could be souped up. Of course, you change the tubes, you usually ahve to go underneath and play with biasing resistors and maybe move pins around. --Mike K. AA1UK

Did you email the seller and ask what the 3 tubes were? That would give clues as to where they would go, and whether sockets would need rewiring for pinout changes.

I'm assuming this is the correct auction:

<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=2155886265&category=7275
>

I'll agree that subbing the RF amp tubes would have more merit. But the
6AG5's aren't too bad. There's some VHF pentodes with a more gain, but not
a hell of a lot more. TV sets went to a cascode RF stage around then. The
6J6 won't sub for the 7F8 mixer, because of the 6J6's common cathode. A
12AT7 might be better, but I figure the 7F8 is good enough with a couple of
decent RF stages ahead of it. At least Hallicrafters used a decent socket
for the 7F8, rather than those rotten wafer sockets.

I considered most of these mods to my SX-62 when I was recapping it .
Didn't bother. Sensitivity isn't a really a problem. Now, I'd pay money
for a drift-stop kit!

Date: 2003-02-02 11:51:57 UTC
From: rcube73@netscape.net
Message-ID: <a7f3e0d5.0302020351.30f1aa55@posting.google.com>
Source record: 34698

FS: Unusual B&W Model 381B transmit / receive antenna switch.
Operates on the 80/40/20/15/10 meter ham bands. Requires 110 VAC.
Vacuum tube design accomplishes antenna switching with use of relays.
SO-239 connections for antenna, transmitter and receiver. I'm not
familiar with the theory of how this gadget works its magic, so have
never chanced blowing up a perfectly good receiver by error (mine) or
failure (its). If you know how this thing works, and trust it,
here's your chance to own one in very good cosmetic condition. I
have no documentation ( schematic available on BAMA site ) and have no
idea if it works. Sold strictly as is, use at your own risk, could
possibly cause earthquakes, dandruff, global temperature indifference
or cosmic toenail fungus. Or worse, you could damage you receiver.
Don't ask why I bought it, I can't explain that. $30 shipped anywhere
in the US. e-mail wb8cac@qsl.net

Photo at: http://www.qsl.net/wb8cac/trswitch.jpg

That's the $22.00 question. The seller was quite shy about exposing the
tube numbers or the instructions in the picture. I think you'll have to pay
to see those cards.

Good grief, he uses the fact that the mods will cause the receiver
to overload on strong signals to be a selling point?! He could sell
more kits IF the receiver had the problem he creates by retrofitting
to the tubes that Hallicrafters origionally used.

Pete

Hey! Never thought of that! He sells the "anti-overload" upgrade after he
sells the "sensitivity" upgrade!

# 936. FS: TEST EQUIPMENT, HP, B&K, GENERAL RADIO

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-02 19:00:42 UTC
From: mnowlen@comcast.net
Message-ID: <3e3d63a1.228829769@news.va.comcast.giganews.com>
Source record: 34709
Cross-posted to: rec.radio.swap,misc.industry.electronics.marketplace,sci.electronics.equipment,rec.radio.amateur.boatanchors

I have the following test equipment and other items available.
Descriptions and pictures of most items are posted at:
http://mywebpages.comcast.net/mnowlen/avail.htm
Others are available on request. All items are fully checked and
working to original specifications. They all come with a 7 day right
to return and a 30 day warrenty, unless stated otherwise. Detachable
power cords are included (where applicable). Copies of manuals are
included if available.

HEWLETT-PACKARD 200CD Oscillator, 5 Hz to 600 kHz, with copy of
manual: $75 (price reduced from webpage)

HEWLETT-PACKARD 236A Telephone Test Oscillator almost mint: $125
(Works great for audio and general applications too.)

B&K Precision 3020-AM Sweep/Function Generator w/Tone Burst and
built-in AM Modulation, sorry no power cord: $125

HEWLETT-PACKARD 1206A Oscilloscope with copy of operating
instructions: $200

HEATHKIT IO-4210 Solid State 10 MHz Dual Trace Oscilloscope in good
condition but needs some service and repair. Trace is good but a bit
out of focus. Sweep works onot working ablve 1 ms/div. as-is: $40
Picture at: http://mywebpages.comcast.net/mnowlen/heath-4210.jpg

HEWLETT-PACKARD 400E AC Voltmeter with copy of manual: $125

HEWLETT-PACKARD 400EL Logrithmic Reading AC Voltmeter with copy of
manual: $175

SUPERIOR Powerstat Model 21 VARIAC 0-140V, 4.5 Amp Panel Mount: $40

GENERAL RADIO Type 200B 0-135V, 3 Amp Panel Mount: $40

TECHNIPOWER (GENERAL RADIO) W8 VARIAC 0/140V/8.5 Amp Panel Mount NOS
New in original Packing : $125

HEWLETT-PACKARD 7560A Logarithmic Convertor, as-is: $50

GENERAL ELECTRIC TF4RX02NA Power Transformer Has Four 32 volt @ 4 Amp
windings. Primary tapped for 109, 115,120,126, and 132 Volts.
**Great for 200-300 Watt Solid State Amp**, two available $50 each

WILTRON Model 9041 Transmission Level and Return Loss Measuring Set,
Mint cosmetics, passes self tet, sold as-is: $150

HEWLETT-PACKARD 355C and 355D Style Electrically operated Attenuators
50 ohm: 0-10 dB and 0-100db attenuators operated by 28 volt
solenoids. They have the number FSN 5985-X44-0516 painted on them and
have military style mountings and connectors. Solenoid control
connectors included
Picture at http://mywebpages.comcast.net/mnowlen/hp355remote.html
$125

UTC Audio Filters in good condition. Testing and working. The LML and
HML are 600 ohm terminations.
Picture at: http://mywebpages.comcast.net/mnowlen/utc-filters.jpg
Low Pass Filters:
LML 600: 600 Hz
LML4800: 4800 Hz
LML 9600: 9600 Hz
High Pass Filters:
HML 300: 300Hz
HML 1200: 1200 Hz
HML 4800: 4800 Hz
Bandpass:
W839C: 1000 Hz
$20 each

Buyer pays shipping. Send Zip Code for estimate.
I can accept PayPal (to PayPal Verified Addresses only, PayPay fee not
refundable) and Postal Money Orders for immediate shippment or
personal check with 10 day clear.

Please reply via e-mail
Thanks for reading.

## 937. FS. Ten year collection of VLF "Lowdown" bulletins

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-02 19:00:57 UTC
From: radioman390@cs.com
Message-ID: <20030202140057.03877.00000387@mb-fr.news.cs.com>
Source record: 34710

In December of 1981 I bought from the LWCA copies of all prior issues, a stack about 2-1/2 in high and put them in a looseleaf binder.

I've enjoyed reading them over the years, but maybe somebody is intetrested. There is no Volume 2, but I've added a few issues after that date.

Want $35 + shipping. Paypal preferred

## 938. WTB: National Emblem

Newsgroup: rec.radio.amateur.boatanchors

## 940. Emblem NC-125?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-02 21:00:57 UTC
From: Ian Webb <ianwebb5@attbi.com>
Message-ID: <3E3D8716.FBB3B77@attbi.com>
Source record: 34713

Do you have the approximate dimensions?

Approx 2-3/4" side?

I might be persuaded with a sufficient incentive to consider letting go of the emblem on my spare NC-125 cabinet that I thought I'd try painting one of these days to replace the cabinet on my NC-125 that is pretty scratched on sides and top.

The cork wasn't for insulation, but to keep you
from cracking the feedthrough insulators when
tightening the hardware at installation time.

Without it, you could go from loose to destruct
with very little warning.

Hi Bob,
Don't understand it, but you are right. Most of the pages wouldn't
display properly in a viewer. When loaded into Photoshop, they looked
fine. Anyway, the offending files have been converted from gif to
tiff and will display properly now. The schematic is page 2.
Sorry for the inconvenience and thanks for calling the problem to my
attention.

I have't got a picture of one. I've got an electrovoice #666 microphone and the data sheet which I found on the internet mentions that connector. An XLR female fits into the microphone if you push real hard. It must have the same 3 pins in the same places, but I can't push the xlr in all the way and the locking mechanism on the XLR isn't right for the microphone. Looking at the microphone, it looks like one side of a circle has been cut down an itty bit, and perhaps there was a screw in the connector which tightened the cannon connector into the microphone. Interestingly, according to the data sheet, the grounded connection is the middle of three pins of the microphone, whereas on an XLR, as I recall it's pin 1 which is the shield. I have adopted an XLR to get it to work in a half baked sort of way, but it isn't the way it's supposed to be.

# 961. Johnson Matchbox, Model 250-23-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-03 23:34:43 UTC
From: starsekr@aol.com
Message-ID: <f2828edc.0302031534.10729a06@posting.google.com>
Source record: 34733

I've recently aquired one of these in pretty good shape except for a couple of little things.
1. Insulation on the ceramic output terminals. The former owner removed the output terminals (ceramic feedthroughs), put down a layer of black Scotch 27 tape inside and out, and put the terminals back. Looks pretty ugly and the tape is starting to go to goo. I assume there was something under the terminals that acted as an insulator before. Info on material, color and thickness would be welcome.
2. The back of the Matchbox had black,brown and orange graphics, as well as black labeling. They were probably some sort of transfer decal, as the clear edges are showing a lot of yellowing. These are about 60 % complete. Anyone have an idea how to redo this? If someone has a good looking matchbox and could send me a gif or jpg of the back so I could see where I need to go that would be appreciated too.

Here is a pretty good photo:

http://images.prosperpoint.com/images/1601/81057-966.jpg

The labeling is:

Top Row --

1 - Single Wire

2-3 = Balanced Two wire Line
Coaxial Line to either line
terminal and gound

Bottom Row --

1 - Ground

2 -- RF Input

Terminal Strip

1-2 RCVR ANT

3 - RF Probe

4-5 RCVR CONTROL
6-7 RELAY 115 VAC

don't know about the tape... Should not be necessary with feedthoughs..

Hope this helps... You can find a manual at bama..

73,

Larry,

I am looking for a perforated top cover for the SB-220
amplifier for a restore project. I would like one in
better than average shape. I have one that I could trade
with you and pay some boot for a like new one.

Also looking for a new SB-220 case. Same condition
must be in very good shape. No dents etc. Can trade
mine for yours and pay boot.

Looking to restore one to like new shape.

Thanks for reading,

Tom

I have their 204D. It's a nice compact unit, and has a good step attenuator, down to -60 dB. I don't know if it uses a big variable cap in a Wein bridge like the earlier models. --Mike K.

# 976. SCAM ALERT

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-04 08:01:03 UTC
From: Dan Robinson <darobin@his.com>
Message-ID: <BA64B33F.2B2FF%darobin@his.com>
Source record: 34598

Re-posting from rec.radio.shortwave:

I wanted to bring to everyone's attention a recent
experience I had, with the hope of alerting everyone
both to the scammer, and the situation itself.

I recently won a bid for a receiver on Ebay, and
was contacted immediately by a person masquerading
as the seller. This wasn't obvious at first, since the
SCAM artist (if I can call him that) was pretty good
at making it seem as if he and the seller were one and
the same.

The technique was to request payment immediately
via Western Union. This in itself made me wonder, and
I fired back a couple of questions. It was not until I got
to the point of initiating a potential payment, that I was
alerted, by Western Union itself, that the person impersonating
the seller was a fraud suspect. The Western Union website
apparently already had a STOP PAYMENT notice for this
individual.

Before this was over, the SCAMer attempted to change his
name, actually emailing me to use a separate name for the
Western Union transfer. A check of the phone directory
in Brooklyn, NY revealed, of course, no such person(s) at
the address given. The final step was contacting the seller,
a major Ebay antique concern, who has, I am told, initiated action against
this crook (although I'm sure whoever it is is attempting it again on Ebay).

The names used by this individual were STEVE BENOIT and/or
LOUIS VOLMAR at the following address:

187 Myrtle Ave
Brooklyn N.Y 11239

This is unfortunate. Ebay is a toothless tiger. They seem to burden you down with policies and rules but when it comes right down to it, they do nothing to help you when you are cheated.
I have been fighting with them through their half.com subsidiary about a book I purchased 3 months ago and never received. The book was supposed to be shipped within 24 hours per their policy. Supposedly it was shipped 3 weeks ago. All I get from them are threats that if I take it to my credit card company they will terminate me.
I have over 600 positive feedbacks without a single "negative" or "neutral" and all these people can do is defend one of their scammers who is ripping people off.
I have had it with eBay, am contacting the Federal Trade Commission (who is monitoring the growing e-scams carefully and solicits your stories) and trying out the other auction sites like Yahoo Auctions and Amazon Auctions.
Caveat emptor...especially on eBay and half.com!

# 980. SX-18 IF Transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-04 16:43:58 UTC
From: "J. Keith Carter" <j.keith.carter@sympatico.ca>
Message-ID: <3E3FEDCE.5741BDA3@sympatico.ca>
Source record: 34603

Hi you Hallicrafter collectors. A friend of mine is just about finished restoring a basket case SX-18 (S-18) and has got to the alignment point. First the 465 Kc Xtal is missing but the switch bypasses this function. Now the problem, the trimmer caps were tightened down to the point one screw was stripped and had to be taped for another screw, so when the sig gen was connected there was no sig through. After a lot of work it was discovered that the IF transformers were peaking at about 520 KHz with the caps down tight. Removal of one can did not exhibit any abnormalities. So far we have determined that it will take in excess of 200 pf to get them to freq. I've never seen IF's transformers go this way before. Any comments or suggestions. They will be appreciated. Keith, VE3JKC. p.s. the Sig Gen is commercial and so is the counter and scope.

Hi,
Not knowing much about the SX-18 I can only make a few guesses. Here are
some questions:
Are you certain the IF is 455KHz?
Is there more than one IF can and if so do they all exhibit this problem?
How are you connecting the signal generator?
Is there an adjustment for the slug in the coil? If so, it may be all the
way out, requiring a lot more C to get down to 455KHz.

I hope this helps but if not, you can e-mail me. Also, if you don't have a
schematic for the radio, I believe BAMA has one you can download. Good luck

Source record: 34607

Hi Bob; The If frequency used at that time (1937 or 1939) was 465 KHz (Kc). There are two stages of IF and yes all the transformers exhibit the same characteristic. And no slug, air core with mica compression capacitors for tuning. I do have the manual and alignment procedure. They actually call for the 465 KHz xtal from the IF to be used in an oscillator to generate the precise frequency, but inasmuch as some one walked off with it, we are using a lab generator and freq counter with scope for output. Tnx for the response. Keith, VE3JKC. p.s. the BFO is still at 465 KHz.
Oh yes, the gen is connected to the 6L7 mixer per the manual but we have checked each stage at a time and even removed one can and checked it separately. Still the same. jkc.

Does anyone know where you can obtain new, blank white cardboard boxes for valves (various sizes to fit the range of valve sizes)?

I have a lot of loose valves that would be better protected in individual boxes.

If you aren't recycling, some gift boxes might do the trick.

Also consider a larger box with padded dividers.

Thanks for all who replied. And thanks for the picture, I guess I'll have to downgrade my expectations of restoring that part of the box :( although it would sure be a nice graphic to have.
I did get the BAMA copy of the manual, which is great since nobody's handbook tells you how to tune up a rig and matchbox type tuning unit. One of those lost arts. The Matchbox instructions don't mention using a dummy load, and I realize there isn't anything magical about 50 ohms, but my current plan is to:
1. Tune the rig into a 50 ohm dummy load, adjusting drive & plate current to proper levels and getting lowest swr on the cable into the dummy load.
2. Use low drive to the PA to tune the matchbox for lowest swr on the coax
3. Increase drive watching SWR and plate current, retuning matchbox as necessary.
4. Let the open wire feeders go where they may, as long as they're not arcing and sparking.

All comments on this plan are welcome.

The T/R relay in my unit is ty-wrapped closed (transmit) which seems to be as good a way as any to do the job. Now to get that loaded, shortened dipole installed in the attic of my condo :) and the ladder line routed away from everything else!

Source record: 34621

Have for sale my SPR-4 receiver in excellent condition. It has, I believe, 18 crystals installed including most of the ham bands plus some shortwave crystals. Also included are the owner's manual, crystal calibrator, shorting adaptor to keep it in receive, the SO-239 to RCA phono adaptor for the antenna, AC cord, DC cord including Drake plastic box, and a brand new power transformer I bought as a spare. $350 plus UPS shipping.

Have a new in the box Heil 5-5 boom mic headset. This has the single earpiece and the HC-5, full range or ragchew element. Bought at Hamvention 2002 and haven't used it. $90.

Also have a Nye Viking phone patch in excellent condition for $20. Includes a copy of the manual.

Thanks for reading the posting.

73s,

Evan

Rather than individual boxes, you might want Antique Electornics Supply's "egg crate" boxes, which are larger boxes (about a foot squyare and as deep as the type tube they're made for) with criss-cross dividers that make individual "cells" for each tube/valve.

I bought several of these (they aren't cheap, unforch) when I had to move across the US and pack up a LOT of tubes of various sizes, from 7-pin minis thru "globe/balloon" 71As. They work great.

I'd recommend individual boxes only if you want to label them for quick finding.

>even though the owners manual shows a tuneable condition to this part.

I looked at the similar setup in my 180, and it sure looks like there should be a slug, to set the center point of the front panel control, which operates a variable cap.

Unforch, the internal Slot Depth pot is bracket-mounted right over the top of the coil, so I cna't see if I have a slug or not. I'd have to pull the rx from its cabinet to look from the other end. However, I once did a *complete* alignment of this 180 and I'm sure I would have touched up that alignment, and would have noticed if there was no slug.

So if I had to guess, I'd say there should be a slug and somebody tinkered with your radio and lost it. --Mike K.

FS: MOTOROLA CONSOLE/MOBILE FOOTSWITCH
This is a very heavy duty footswitch which Motorola uses for mobile installs (this one is from an ambulance install, allows hands-free for paramedic with headset) and also for dispatcher consoles. Don't have a Motorola part number, but this is the real-McCoy, drop shipped by Motorola from Line Master Switch Corp. OEM. Unit is is heavy cast, black with black foot lever, measures approx. 5"x4"x2". Internal terminal strip permits wiring for normally-open or normall-closed. These make a perfect foot operated PTT for your ham rig or can be reused for commercial applications. I have several of these, some with cables, some not. Very easy to replace/rewire cable. $20 each plus shipping. Email if you want pix or more info. Remove NOSPAM from my email address: NOSPAMdt0124@comcast.net

I have a Heathkit SB-300, SB-401 combo that have been sitting in someone's basement for 30 years. The multi-ganged band change switch on the SB-301 is fused solid. I am reluctant to force it as I would probably bust the switch. Does anybody have a way of freeing up this switch? It looks like the rotary metalic contacts have fused to the bakelite wafer. I am also interested in obtaining Heath Amateur Radio gear for restoration. I live in Eastern Ontario.

Thomas, It sounds like a "type C" I've ran into them on some "old" equipment, they look like a BNC's big brother. In the US Fair Radio used to carry them, also ordered 2 from Newark many years ago for some old Medical Imaging equip that used them.

Re:
Could someone please help me solve a question I have about the notch
filter (L3, the one mounted near the slot freq. control
on the front panel) for a Hammarlund HQ-145. What I need to know is if
it has a core.

I'm not a HQ145 owner, but according to the schematic, L3 has a tuning slug.
Any "grab-bag" slug small enought to fit in the coil form should work fine. If
you can't find one, email me the inside diameter and I'll see what I can find
in my hellbox.

# 1024. Re: Johnson Matchbox, Model 250-23-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-05 22:52:09 UTC
From: "Roger D. Johnson" <n1rj@pivot.net>
Message-ID: <3E419599.A2FB5AFF@pivot.net>
Source record: 34547

The function of thr T/R relay in the old Matchboxes was
to select a different tap point on the coupling coil for
the old boat anchor receivers that had a higher input
impedance (150-300 ohms). With modern radios it can be
removed or jumpered. Having said that, there is a possible
use for the relay. Often, it is not possible to get a match
on all bands using the same tap point. Using the relay (or
a switch) to select a different turn on the coil offers a
greater matching range.

73, Roger

Source record: 34549

Last comment about the output terminals. I took that section apart,
and there were very,very thin pasteboard insulators under the
beehives. They were a faded red in color.
After removing the tape, I found that it had been used to insulate
the sharp edges of the cutouts in the rear panel. I suspect the
former owner had some sort of arcing from the sharp edges of the
threaded rod going through the beehive to the sharp edges of the
panel. I think the best fix is just a little light file/sandpaper
over the cutout edges to round them off and a sleeve (shrink tube or
maybe fish tank air tube) over the threaded rod.
Thanks to all who responded off line.

# 1034. HELP: TR-4Cw problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-06 13:59:07 UTC
From: Chris <va3ut@rac.ca>
Message-ID: <0Tt0a.5140$Zt4.873912@news20.bellglobal.com>
Source record: 34557

Hi,

Thank you for reading this posting.

I have a Drake TR-4Cw and have some problem with audio. Audio quality is fine and smooth, but the AF gain knob should be turned higher than 2 o'clock position. There is absolutely no audio before 2 o'clock, and the strong audio pops out when it passes 2 o'clock all of a sudden. I can listen and talk with this radio, but this is one major problem. The receiver sensitivity is a little low on higher bands like 20, 15 and 10, but it isn't too bad. Does anyone know what is causing this problem? I was suspecting the 6GX6 tube and 12AV6. I replaced the 12AV6 with an NOS tube, but 6GX6 seems weak.

I appreciate any input and thank you for your help in advance. 73,

Chris VA3UT

# 1035. F. L. Sprayberry radio course (1936) - any info ???

## 1038. SX-101 dial pointer?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-06 16:24:26 UTC
From: "George R. Gonzalez" <grg2@attbi.com>
Message-ID: <__v0a.10791$iG3.1554@sccrnsc02>
Source record: 34561

Hi folks,
I'm fixing up an old battle-scarred SX-101A. Two main questions:

(1) The chassis is horribly rusty, with many many mouse-pee rust pools.

I think my choices are:

Clean it up with wire brush, scotchbrite, mask off tube sockets, IF's, and:

(a) Spray on some clear coat to keep the tarnish from re-appearing.
(b) Paint it with silvery aluminum.
(c) Paint it with Gold hammer-tone.

(The gold hammer-tone is the closest match to what may have been the
original gold-tone plating).

Any opinions appreciated.

---

(2) The dial pointer is missing! There's still the little slider along the
bottom, but that's it.
I can cobbl together something if I just knoew whjat it looks like.

Can anybody describe what the pointer looked like, i.e. flat, wedge,
tubular, and what color?

Regards,

George

# 1039. Re: SX-101 dial pointer?

The dial pointer on my SX-101A is flat, thin, and painted red.
It's perpendicular to the dial glass, meaning that you are
looking at the edge of it.

> Anyone wonder what kind of 2-way radio recordings Colin Powell was
> playing @ UN yesterday?

Not much available online, this might help.

Since writing the original series of articles almost three years ago, more information has come to light concerning the radios used by Iraqi forces. As noted in the original series, Allied troops being limited as to the type of equipment they brought home as trophies often opted for radio equipment even when they had no expertise in this field. Unfortunately by the time we come into contact with this equipment, the details of it's capture were lost. With that, the method by which the Iraqi's had acquired or used it. But several new entries can now be made to the old line up of equipment, and some new insight.

In the original series we listed only one radio of German origin, but at the same time we noted 2 French models, 4 British, 2 Italian, and quite a number of Russian or Chinese. This might tend to show that Germany was not a primary source for Iraqi radio equipment, especially when combined with the debate over the only German radio listed, the SEM-52A hand held VHF FM transceiver. With few exceptions the shear numbers of radios collected by Allied troops would show that Iraq was the original purchaser. But not the German examples.

We had speculated into the possibility of the Iraqi's use of equipment that they had capture during their earlier war with Iran. We now have proof that this was indeed a source for at least some of their material. At the same time we completely overlooked a scenario where the same might be true of radio sets captured during their invasion of Kuwait. It might be that a great deal of the communications equipment they used originated from these sources as we now have evidence to support both these scenarios. Numerous personal accounts from advancing Allied troops detail their overrunning bunkers containing hundreds of radios of various types. Were these simply depot's for the storage of excess Iraqi radio equipment, or in actuality cashes of goods that had been collected from Kuwaiti forces? Evidence now exist to support the latter assumption.

.
#1.) Though Iraq boasted the largest military organisation in the world for a country twice it's size, it did not spend it's money on communications equipment.
#2.)The Iraqi's were woefully lacking in their technical expertise, preventative maintenance, or general maintenance of their equipment.
#3.) they had absolutely no eyes for future supply or logistics problems,

which is the single most important consideration for any item of front line combat inventory.
#1.) With all the money this country had to spend on their equipment, that radio equipment which has been available for our inspection does not reflect a respect for communications ability or need. Equipment found is never of the latest design, or even of the same generation as that used by other nations military's. Instead it appears that the price tag was the determine factor in the acquisition of signals equipment for the Iraqi military. Radios found will fall into two categories.

a.) Obsolete equipment discarded,or replaced in the inventory of the country of origin.
b.) Second class equipment, that though was intended for military/police/commercial sales, and did reflect some state of the art technology, and was physically ill suited for combat service.

#2.) After the inspection of numerous pieces of radio equipment, it is apparent that if a radio should fail, and couldn't be fixed by a role of electrical tape, it was pitched. In the event it wasn't, and repairs were attempted, it should have been pitched and later was. I think this technical failing can be seen also in every other item of Iraqi equipment that was more complicated than a belt buckle. Especially if that belt buckle did not include some insignia of rank.

#3.) The diversity found in the radio equipment used is astounding. Recovered radios show the country of origin as Russia, England, France, Italy and Germany to name just a few. It would have been impossible to maintain any kind of logistic support for such a diversity of equipment types. Thus, the Iraqi army must have considered this equipment as disposable, i.e. if it quit, throw it away and get another one, this observation is further supported by item #2.

Before we begin to examine this equipment, we must keep in mind that we don't know the origin or time frame in which the Iraqi's acquired it. Radios could have been purchased from the manufacture / country of origin, or the seven year war with Iran could have supplied numerous captured examples, as well as their blitz of Kuwait.

Source record: 34579

I had a different tr4-cw problem, but possibily there is some connection. My problem was hum when I listed through headphones. I thought it might be the multi section electrolytic in the Tr4cw or the power supply. Upon check around I found it (hum) was a common problem, and it was suggested that I add some resistance to the audio output - which I did. If someone has modified the tr4cw to take care of the hum problem, or some other problem, then your current issue might just be related to someone else's fix, rather than a tube. I replaced all the tubes in my tr4cw before finding out that it wasn't a tube issue.

AM-6155/GRT-22 FAA Surplus Linear power amp, Specs: 225-400MHz, 50W out (conservative) 10W in, Eimac X651Z/8930 final, extensive metering, can be converted to 2m, 220 or 432, rack mount 7" high, 80 lbs, ITT (model 3212), Part of AN/GRT-22. This Amp uses Emiac X651Z/8930 in silver-plated cavity-drawer; 175-turn TUNE counter dial. Main chassis has solid-state power supply and buffer amp/mulitplier; panel meter monitors voltages. Requires 105/120/210/240 VAC 50-400 Hz and +20 V req 60 ma. +20 V keyed; 7x19x18.5, 80 lbs shipping weight. The HV Supply from AM-6154 is Loaded with GREAT parts to include a 1752V at 270ma transformer, 8HY 300ma choke, 100K ohm 95 watt resistor, 2x5mfd 3KVDC capacitor, & rectifier circuits card. Most hams use these amps as a 2m or 220 Mhz or 432 Mhz Linear. After conversion, the output power is approximately 400 watts. One ham has used a 4CX400A (available from Svetlana)to raise the output power to 450 Watts. Do a Google search of AM-6155 and you will find many references to conversion information. Used - Excellant Condition (NOT TESTED) but sold AS-IS.. Email if you have any questions. Buyer will pay shipping (approx 90 lbs) from zip 31088 and a packing charge of $20.00. I will ensure the item is packed to survive the trip! 73, Larry Keith KQ4BY

Source record: 34582

The Iraqi radios are tin cans connected with strings. To intercept, you must use a laser to detect the string vibration. The poor quality was caused by the poor string quality.

# 1060. FS: Hallicrafters SX-28

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-07 02:02:18 UTC
From: JRS <n3ab@fast.net>
Message-ID: <ls464vg92tjlvq631hv0accto8cpkt8568@4ax.com>
Source record: 34583

I have for sale a Hallicrafters SX-28 which I purchased years ago, but I never got around to restoring it. This appears to be a rack mount model and has a top cover. Bottom cover is missing. Overall physical condition of this radio is good to very good. All of the knobs look original. The inside glass covering the "S" meter has a crack on it. Since I do not have a variac available, I did not try to power it up. It has been in storage for over 10 years, so the new owner may want to make some checks before any power is applied to it.

This radio is heavy and I will not ship it. Buyer will need to either pick it up or I can meet somewhere within a reasonable driving distance of Allentown, PA. This will give the prospective buyer a good chance to carefully check this radio before purchasing.

A picture of it can be seen at:
http://www.users.fast.net/~n3ab/sx28a.jpg

More pictures are available by email. Asking $195.00 obo. Cash, money order or cashiers check preferred. Please email me if you have questions. Thanks for reading.

John N3AB

Unforch, this is the attitude of almost any people towards almost any modern electronics. If it breaks, toss it and get another. Modern consumer electronics is based on this principle, and I suspect military gear is equally non-repairable, though the US forces probalby try to collect the stuff and send it to some repair depot somewhere. But it's a lot different from patching up an R390-A :-)

A more sobering thought: Your article seems well written and based on facts, and is probalby close to true. But, wouldn't the Iraqis want us to believe just this -- that they can't fix anything more complex than a belt buckle, that their comm gear is junk, etc.?

I remember when everyone thought a Russian couldn't fix anything besides whacking his tractor with a big hammer. The Soviet govt. did nothing to dispel these rumors. It was a rude shock when Sputnik went up in 1958. I hope there are no surprises waiting for us in Iraq. --Mike K.

# 1065. FA:2 GE PROGLINE 2 METER TRANSCEIVERS WITH CHANNELIZER PLUS-EXCELLENT

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-07 05:02:10 UTC
From: Don Pelrine <dpelrine@c4.net>
Message-ID: <3e432534.0@paperboy.c4.net>
Source record: 34584

2 GE PROGLINE 2 METER TRANSCEIVERS WITH CHANNELIZER PLUS-EXCELLENT-------Two vintage GE Progline 2 meter transceivers. One Transciever has an AC Power Supply with a front GE front Control unit with the transmitter and receiver and also has been modified to use a GLB 400B Channelizer which allows you to operate the complete 2 meter band in 5KC steps without having to install the GE Oven Crystals each time you change frequencies on the band. The Channelizer synthezizes the frequencies and and acts like a VFO for both the transmitter and the receiver. The Chanenelizer was bought new for $180.00. The GE Transceiver is all vacuum tubes and the power supply is fused and operates from 115VAC with standard ac cord and plug. I have unlocked the case (2 keys included) and inspected the units and all are fine. The 3 units inside the case are labeled "Transmitter 4ET20A2, Receiver 4ER25CA, Power Supply 4EP2MI. There are also a spare transmitter and receiver that may be used for operation or parts. The Transmitter is labeled 4ET21A2 and the receiver chassis 4ER215B2. The sets installed operate at 30 watts and the spare set would provide up to 50 watts output. All the GE Prog Line documentation is complete for operation, specs. and servicing, update modifications etc. Same with the GLB400B Channelizer. Incuded is a GE P/T Mike that was made by Shure Brother's Model EM21A with heavy spiral cord and 4 prong Amphenol plug that inserts and locks into the bottom of the GE Control Unit of the transceiver. Also there is a complete antenna system 5/8 wavelength mounted on a strong magnetic base. Comes with 2 GE Speakers. All cabling is included. These vintage units were used by the Western Electric Company in their vehicles for mobile communications with Oven Crystals. I obtained the transceivers from a retired AT&T/WESTERN ELECTRIC/NYT transmission engineer. He is 97 years old and was with the bell system for 47 years. He is still and avid radio ham and operated this 2 meter rig equipment from his home and his family auto. the total weight for the rig including all I have mentioned above is 47 pounds( the documentation is 3 pounds). There are also some spare tubes. The second GE Prog Line is an ERG56TA566 ET-4A ER-48A black rugged metal transceiver for mobile operation with all the cabling/connectors and GE Volume -Monitor contol unit that uses transistors and just a few vacuum tubes. Comes with a couple of antenna bumper mounts and springs with all the hardware for vehicle mounting and installation . All GE operatioal, technical , and installation documentation is complete. I have also opened this unit--has lock but has been disabled and found all in order and clean. There are 24 GE Oven Crystals for 2 meter operation all in excellent condition. All this gear weighs an additional 46 pounds. We are talking real boatanchor here. Both Tranceivers are excellent specimens. Would have to send all in 2 separate shipments. Estimate each package at 50 pounds.
On auction at eBay--veiw the many pictures at:

They had a few; one of them was the 204C, while the other was the 204D.
They were both Wein Bridge types, the difference being that the 204D had the
step attenuator, in addition to the variable output attenuator. Still
another was the 209A, which was identical to the 204C, except that it also
had a square wave output. The residual sine wave distortion typically
measures between .025 and .03%.

If they are wired correctly you only need one GFI outlett per circuit.
A falt on any of the other outlets on that circuit will trip the whole
thing.

My shop is wired that way and they do work very well. I was working a
pices of equipment and shortened a piece of wire to fit. Forgot the
sucker was plugged in (not into the GFI outlett). I reset the breaker
and still nothing. I went over to the GFI outlett, reset it and they
all went back to working.

Actually the US Army keeps repair techs down to the company level. At this level it often consists of replacing a board and re-aligning the unit but some board level repair is done. Some depot level repair is done at the unit level if they have a particularly sharp tech with the skills and the depot is usually happy to let them or even send some extra work their way. If more major work is required then the units are "DX'ed" (Direct Exchanged) at the Division level Depot, and the unit's inventory is adjusted to reflect the new serial number. A small team deployed in the field will have a radio repair tech with them who carries a collection of spares, components, and test equipment as he sees fit to keep the team in communications.

To their benefit, the military selects designs based on servicability as well as performance.

Steve

My basement has 37 outlets altogether (including the 7 GFCI's), with each GFCI protecting about 4 "regular" outlets. IIRC, the only UNprotected outlets are for the refrigerator, the furnace, and the two sump pumps (one for seepage and the other for sewerage).

# 1079. Need coil form

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-07 16:40:17 UTC
From: jcplpsm@aol.communicate
Message-ID: <20030207114017.08918.00000243@mb-cg.aol.com>
Source record: 34501

Does anyone have a good source for coil forms? T have tried all my usual sources, AES, Dicks, etc. I need a form that is 2 3/4" long with an inside diameter of 3/8". The outside diameter can't be more than 9/16", as this is the needed dimension, but can be smaller. I can always build it up. The original form is phenolic, but I believe paper will do fine. The inside diameter is critical as it is slug tuned.

Thanks for any suggestions in advance.

From: K3HVG <jeepp@erols.com>
Message-ID: <3E43F03A.F28DDD8F@erols.com>
Source record: 34503

I've just acquired a NIB radio system. It has all the coil sets, the various controls, remote boxes, dynamotor, connectors, test meter, spare tubes and parts, etc. All the serial numbers for each part and accessory match!! What I don't have are the 2 teleflex cables for tuning and bandswitching. The installation kit has a bag of teleflex cable terminations and the little local tuning knobs, but not the flex cable, itself. It uses the larger type cable (I tried an ARC-5 cable but it was too small). I suspect that it uses the type like the MN-26 and ARN-6 use. I assume that the appropriate Navy aviation depot would have fabricated the cables when the radio system would have been installed in the aircraft. Anyone out there with some stock cable or complete flex cables? Length not important. A single cable, cut in half and re-terminated would probably be OK, although a special crimp tool may be required (like the ARC-5 book shows). Anyway, the current plan is to get this this system on the air, although I kind of hate to take everything out of their boxes....hi!! If you're currently running a GF/RU, I'd like to hear from you. Now... if anyone would like to trade an operational BC-191/375 setup, I'd be happy to talk....
Regards de K3HVG

4 rigs for sale, 2 swan 350's and 2 yaesu ft dx 400's
all work just fine, with manuals and a few spare tubes including spare finals
Surrey BC will not ship, you pick up

# 1085. FS: National RCK Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-08 01:38:30 UTC
From: JRS <n3ab@fast.net>
Message-ID: <ben84vs59ef3edggc72oega27j0v72ubfr@4ax.com>
Source record: 34508

I have for sale a National RCK receiver which I purchased years ago, but I never got around to restoring it. This appears to be a rack mount model and has a slide-on cover which covers both the top and the bottom of this unit. The panel above the radio holds a speaker, and the brackets that hold the receiver and speaker panel together have National emblems on them. Looks like it covers 200 to 400 kHz and 1.3 to 30 MHz. Overall physical condition of this radio is fair to good. It needs a good cleaning! Receiver looks complete. All of the knobs look original. Since I do not have a variac available, I did not try to power it up. It has been in storage for over 10 years, so the new owner may want to make some checks before any power is applied to it.

This radio is very heavy and I will not ship it. Buyer will need to either pick it up or I can meet somewhere within a reasonable driving distance of Allentown, PA. This will give the prospective buyer a good chance to carefully check this radio before purchasing.

A picture of it can be seen at:
http://www.users.fast.net/~n3ab/national1.jpg

More pictures are available by email. Asking $150.00 obo. Cash, money order or cashiers check preferred. Please email me if you have questions. Thanks for reading.

I am pretty sure I have a good stock of the spline cables as well
(actually both the big and small types for the RU/GF and an/ARC-5). If
I dig, I might even have some of the square end type.

# 1103. HO-10 Monitor Scope & High VSWR Readings

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-08 20:40:59 UTC
From: Hobbes <hobbestg@voicenet.com>
Message-ID: <3E4569A4.5CEC@voicenet.com>
Source record: 34526

To the Group,

Last hamfest season I picked up a Heathkit HO-10 monitor scope that I intended to put in the station lineup at a later date. However, when I put the monitor scope in line, I get an abnormally high VSWR reading. Unfortunately my major problem is that it did not come with an instruction manual. Anyone ever have such an experience with this unit? All other functions on the scope such as trace, focus, position, etc. appear to be working OK. Any suggestions would be appreciated. Thanks for reading my posting.

Ed K2ZE

Source record: 34527

Here is a link to the schematic:
ftp://bama.sbc.edu/downloads/heath/ho-10.gif/

I would first look carefully at the wiring
of the SO-239 connectors. Make sure that there is a good
connection to the chassis ground on the edge
of the connectors. Look for signs of damage/arc-over
at the Xmtr Atten capacitive voltage divider switch.

73,
Ed

You might also look for a product called the Betsi. This was a motherboard, originally intended for the Commodore Pet, which provided for S-100 expansion. The name was changed from Petsi to Betsi due to legal pressure from Commodore. IIRC, the KIM has the same parallel port as the Pet.

Ed

## 1110. F.S. misc. tubes/valves

Newsgroup: rec.radio.amateur.boatanchors

Source record: 34539

I have an FTDX560. It powers up but neither receives nor transmits.
Cosmetically, the front panel is good, it has one incorrect knob, is missing
the spinner on the VFO knob, and the case is in fair condition.

Due to the weight of the unit, I prefer not to ship it. I will sell it as a
pick-up only item on Long Island for $50

# 1121. FS: ART-13 Xtal Oscillator

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-09 16:43:28 UTC
From: K3HVG <jeepp@erols.com>
Message-ID: <3E468530.332AB5E7@erols.com>
Source record: 34444

I have a Comco crystal oscillator module for an ART-13/ATC transmitter. I also have the installation instructions. The module is in good condition. I think I can include the mating Jones plug, but I do not have the extra switch wafers for the channel switch and (if it is required for your setup) the remote control channel switch. This is the unit that plugs into the LF module area. I must say, however, that the installation is not for the feint of heart. If the entire mod is done, it does require some metal work, switch modifications, and wiring, of course. One can eliminate some of the work and switch the channels via an internal switch (that was what I was going to do). I elected to leave my ATC in WW2 condition, inasmuch as its such a nice unit and I only have one. FYI, this module was brought out in the 50's to "try" and make the ART-13 comply with the new RTCA requirements, of that era. The box and the documentation for $48, plus actual postage. Thanks de K3HVG

I can remember that my Dad took a home study course in the early 50's, when I was very small. The books that came with the course were around our house for many years thereafter, and I was always reading them as a kid. I guess thats how I got interested in radio and tv. The school was called Sprayberry Academy of Radio, at the time. And it came with a very crude looking VTVM, with a large case and a small meter movement, that I used for many years. I can date the course by a statement I found in the chapter on phonographs. It said that "All phonographs you will find in homes will have a turntable speed of 78 rpm. But you may find some in radio stations that also have a speed of 33 1/3 rpm with a gearshift for changing speeds". It also went on to give instructions on installing a new needle. It said that you should always carry a small scale to measure the needle pressure, and make sure it is set between 1 and 2 ounces (yes thats ounces, not grams!). "After installing the new needle, you should then keep a few old records handy that you don't care about, and play them a few times with the new needle to take the sharp edge off of it." Gee, I never new that you had to break in a new needle to take the sharp edge off of it!

Tom

# 1129. Thanks!!! Re: Yaesu Manuals

# 1132. FS: National RCK Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-10 00:55:14 UTC
From: JRS <n3ab@fast.net>
Message-ID: <q2ud4vkqaauor3jgeb691v89ehciuulhda@4ax.com>
Source record: 34455

I have for sale a National RCK receiver which I purchased years ago, but I never got around to restoring it. This appears to be a rack mount model and has a slide-on cover which covers both the top and the bottom of this unit. The panel above the radio holds a speaker, and the brackets that hold the receiver and speaker panel together have National emblems on them. Looks like it covers 200 to 400 kHz and 1.3 to 30 MHz. Overall physical condition of this radio is fair to good. It needs a good cleaning! Receiver looks complete. All of the knobs look original. Since I do not have a variac available, I did not try to power it up. It has been in storage for over 10 years, so the new owner may want to make some checks before any power is applied to it.

This radio is very heavy and I will not ship it. Buyer will need to either pick it up or I can meet somewhere within a reasonable driving distance of Allentown, PA. This will give the prospective buyer a good chance to carefully check this radio before purchasing.

A picture of it can be seen at:
http://www.users.fast.net/~n3ab/national1.jpg

More pictures are available by email. Asking $150.00 obo. Cash, money order or cashiers check preferred. Please email me if you have questions. Thanks for reading.

I'd suspect the AF gain pot. Before you go tearing it out, find one of similar value, hang it out the side and temporarily wire it in. Not sure where I'd get an exact relacement if that were the problem. For a lead, I'd try the Drake reflector in Tempe, AZ, if it's still going (the Collins and Heath reflectors still are), whatever is left of Drake down in Miamisburg (I think they still have a repair shop for Drake solid-state rigs, but no longer service C-Line and earlier) or Nebraska Surplus Sales. Good luck. 73. Harry, VE3GRO

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

HAMMARLUND, HALLICRAFTERS, AND OTHER BRAND TUBE TYPE RECEIVER OWNERS:
It is likely that your receiver has one or more 6BE6/5770 tubes. I have a number of brand new, in the factory box, 5750 electron tubes.
The 5750 is the JAN military low noise version of the 6BE6W and is totally interchangeable with 6BE6 and 6BE6W tubes, but better.

Price: $2.00 each, plus shipping. Save on shipping by ordering as many as you need at one time.

Try sort for a web page, like www.kenwood.
You may get lucky? This is a guess at a web site.
You could try a guess like www.trio
These are only part web site addresses, and as I say
a guess at that.

I'll bet somone has a better memory than me. I've sold all my Ten Tec gear and have a spare board that I need to identify. It's 2 1/2" X 4" with 8 transistors and one IC, a MC1350P with a 1974 date code. Three toroids, one trimmer cap. and 5 turquoise electrolytics. There are 7 I/O pins at each end. The solder mask for board ID didn't take well but the last 2 digits look like 84. Any tips appreciated.
tnx

>
> Tom

Back in my "disc jockey" days (mid 1960's), the radio station had a nickel taped to each of the turntable tone arms...and those were not light arms. I suppose to keep them on track in case an announcer got excited or something. Or, maybe some of the 78's created too much centrifugal force and the needles would spin out. (it was fun to spin a Spike Jones 78 now and then, but it was not fun to answer the phone after playing a Spike record...crabby listeners...)

$$MAKE YOURSELF SOME MONEY$$, NO SCAM! GUARANTEED MONEY! NO JOKE!$$ An Original Success Story.
Dear Internet User,
Good day, This article I've written is all about the fact where I earned an ASTOUNDING amount of money in less than a month and I've decided to share or reveal the secrets behind making big bucks in the Mail Order Business.
So all money seekers, read this carefully.
Hi, I'm 23 years old and I make more money than my parents and so can you" Turn $6.00 into $60,000...read this to find out how!!! READING THIS COULD CHANGE YOUR LIFE!
I found this on a bulletin board like this one and decided to try it. A little while back, I was browsing through several newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you need to send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are millions) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!!
Let me tell you how this works and most importantly, why it works.... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!

SUGGESTION: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage).
IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.
PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue it’s success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.
~~~>HERE ARE 4 EASY STEPS TO GET STARTED<~~~
STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope ( Please make sure that the bill wouldn't be noticed in the envelope to prevent thievery). Send out US $ DOLLAR, so it would be more acceptable.
STEP 2: Next, place one paper in each of the 6 envelopes and seal them properly. You should now have 6 sealed envelopes, each with a piece of paper stating the phrase, "PLEASE PUT ME ON YOUR MAILING LIST.", your name and address, and a $1.00 bill.
What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting for a legitimate service and you are paying for it! Like most of us, I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!
Mail the 6 envelopes to the following addresses below:
#1)Matthew Speight ; 6 Charnwood Ave.
Atlanta, GA, 43098
#2)R.J. Walters ; 307-1415 st, NW,
Charlottesville, VA, USA, 22903
#3)R. Pena ; 1962 46 St. S.W.,
Naples, FL., USA, 34116
#4)Peter Blum ; 4345 Mickler Road,
Ponte Vedra Beach. ,FL, USA, 32082
#5)K.M. Williams; 1824 S. Lowry St.
Stillwater, OK, USA, 74074
#6)J.A. Bailey; 127 Sandyhill rd.
Ocean city MD, USA, 21842
STEP 3: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.
STEP 4: Copy this article. Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 2.4million groups) All you
~~~

need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18, Section 1302 and 1341, US Postal and Lottery Laws or Title 18, Section 3005 in the US code, also in the code of Federal regulations, Volume 16, Sections 255 and 436, which states; "a product or service must be exchanged for money received." The simple note in the letter, "PLEASE PUT ME ON YOUR MAILING LIST", makes it legal because you are paying for exchange of a service, (adding the purchasers name to his mailing list) for a $1.00 fee.
: Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.
NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!
~~~>DIRECTIONS FOR HOW TO POST TO NEWSGROUPS<~~
Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your mouse cursor at the beginning of this letter, click and drag your cursor to the bottom of this document, right click and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your mouse cursor at the top of the blank page. Right click and from the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name and postal address to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.
Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)
Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the "post" message button. You're done with your first one!
NOTE: Please don't SPAM or send unsolicited emails. It's completely illegal. Send emails to all the people you know or any ways that allows you to, instead of SPAMMING.( Just a reminder).
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about a minute for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to
~~~

rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**
*Now the WHY part; Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still ONLY 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet!!! REMEMBER, PLAY FAIRLY AND HONESTLY AND THIS WILL WORK FOR YOU!!!

# 1153. FS: NIB Navy GF-12/RU-17 Radio System

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-10 23:26:52 UTC
From: K3HVG <jeepp@erols.com>
Message-ID: <3E48353B.583E5BFB@erols.com>
Source record: 34476

After deliberation, I've decided to divest this virtually NIB Navy radio set Most items are in their respective, and marked, original box (albeit they have been opened once) and certainly fully museum-quality. It consists of the transmitter, receiver, shockmounts for the previous, remote rx tuner w/dial, reverse tuning dial, tx remote control, secondary remote control (other cockpit), local tuning crank, a complete set of coils (both rx and tx), antenna relay, remote bandswitch assy., junction box w/ base, bag of tuning shaft couplings, tuning tool, accessory tuning meter, phantom antenna, spare tubes, and dynamotor power supply (28v) w/ mtg plate. All connectors are also included. Also included is the book and original Navy shipping document and inventory. Everything on the inventory is there. Each and every component has the identical serial number. As I said, its in complete and in absolute museum condition.. with the following exceptions: There is some very light scuffing on top of the dynamotor housing (probably from the box top) and on the bottom of the mounting plate. You also probably need to know that the teleflex tuning shaft material, itself, is not included in the installation kit, but the terminations are. Also, using the provided connectors, cables will have to be "made-up". The book has seen some use, over the years, but is in good condition and is complete. The original owner bought this system in 1948 but never set it up. Oh yeah, a couple of the receiver coil boxes have some mouse chews, but the coils are still as-new... hi!!

I am up for offers for this system. I can provide some jpegs if someone is serious but I'll have to re-open the boxes and unwrap. I can also scan the inventory sheet so you can see the Navy part numbers included (especially for the coil sets). No problem, if you're really interested. Cash offers or trades. Looking for the following:

BC-191/375 (working)
HT-32/SX-101A
Other up-scale military HF transmitters.. we can talk.

Thanks for the read.

.

# 1154. SX-16 Help Ne

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-10 23:47:51 UTC
From: John <mjohn@twmi.rr.com>
Message-ID: <n4eg4vs2qr4npl1j1ms2ga258upluf4fnp@4ax.com>
Source record: 34477

I am currently working on a SX-16 and got it operational but the dial
cord broke. I can find no diagram to re string, after searching for
hours on the web. Even if I found it I am not sure how to get at it to
change- it is very crowded.
Any info on where I could get the data is appreciated.
Also, the crystal in set is marked : Channel 51, 25.1 MZ
Does this sound correct ? I thought it was 465KC crystal ?
Thanks,
John

# 1158. Re: HO-10 Monitor Scope & High VSWR Readings

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-11 01:46:22 UTC
From: Gary Schafer <gaschafer@attbi.com>
Message-ID: <0alg4vkh27gpl25tgeijjk3dmoibhf10kl@4ax.com>
Source record: 34480

Hi Ed,

If using it on the higher frequencies it was kind of common practice
to use a "T" connector in the coax line and connect the T connector to
one of the SO239 jacks on the scope. That would usually give a little
better swr performance.

## 1159. Vaco Tool ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-11 02:10:57 UTC
From: Henry Kolesnik <wd5jfr@oklahoma.net>
Message-ID: <v4gmu1sdmnflec@corp.supernews.com>
Source record: 34482

I still have a set of Vaco (RT-14) nut and screw drivers that I got when I was in grade 10 in 1956. All the blades share a common handle and now the metal insert is turning in the handle. I'd like to find a new handle but all the Vacos I see have built in handles. Any tips on where I might find a good handle, new or used would be appreciated.
tnx
hank wd5jfr

I didn't think that radio stations were still playing 78's in the 60's.
Centrifugal force would have no effect on the tonearm, since it is not spinning
with the record.

Wanted to buy a 440 crystal F.M. transceiver for a blind friend.He only
needs 3 frequencies and it is easier and cheaper for him to count the
clicks.Low power is fine too.
A plus would be any of the frequencies he needs which are:
444.55 +
443.70 +
446.00 simplex
THANKS

If the crystal is in a black holder with the channel number on the top, maybe white on black or black on white, the crystal could very well be a military surplus crystal in the 456 range. Those crystals were around by the millions and were used for applications like yours.

A synthesised rig will work if you can program just the frequencies he needs in to memory. If the rig uses UP and DOWN buttons on the mic, then he only needs to count the button pushes from the first to last memory. This works as long as the memories don't roll over. If they do, most rigs beep at memory position 1. Probably easier to find one of these than a crystal controlled rig, and more versatile if you need to add or change frequencies later.

Source record: 34411

I thought I had this sold (twice), and unfortunately I deleted all of the email from other interested parties. So.......

I have for sale a Hallicrafters SX-28 which I purchased years ago, but I never got around to restoring it. This appears to be a rack mount model and has a top cover. Bottom cover is missing. Overall physical condition of this radio is good to very good. All of the knobs look original. The inside glass covering the "S" meter has a crack on it. Since I do not have a variac available, I did not try to power it up. It has been in storage for over 10 years, so the new owner may want to make some checks before any power is applied to it.

This radio is heavy and I will not ship it (back injury has me side-lined for a few weeks). Buyer will need to either pick it up or I can meet somewhere within a reasonable driving distance of Allentown, PA. This will give the prospective buyer a good chance to carefully check this radio before purchasing.

A picture of it can be seen at:
http://www.users.fast.net/~n3ab/sx28a.jpg

More pictures are available by email. Asking $195.00 obo. Cash, money order or cashiers check preferred. Please email me if you have questions. Thanks for reading.

John N3AB

I recently programmed a 706 for a blind friend. What he did was to have me program an FM broadcast station on a particular channel, then he could count from that channel (most synthesized rigs have encoders with no end stops so if you ever loose your place you're done).

I had more or less assumed that the 706 was impossible for a blind ham because of the menu, but some of the menu beeps turn out to have a slightly different sound than others, so he was able to navigate the menus quite well.

On a 440 only rig I don't know of any places you could find an "always on" station like that, but on a dual bander you could program the weather station into channel 1, then his stations into 2, 3, and 4. He would then be able to tune around until he heard the computer voice and count from there.

..

# 1191. Coil set for Eico 710 GDO

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-12 01:32:13 UTC
From: Bob Liesenfeld <wb0poq@visi.com>
Message-ID: <3E49A41D.FED9BC82@visi.com>
Source record: 34414

Hi gang,
I picked up an old Eico 710 GDO minus the coil set. From the schematic, it appears that each coil is a center tapped affair. I have reverse engineered one for the 7.5-18MHz range. However, the calibration is off over most of the dial except at one or two spots. This leads me to believe that the coil is tapped but not at the center. Does anyone have a set of these coils that they could "eyeball" and give me some specs?

Thanks!

Bob L. WB0POQ

It might be easier to find a Kenwood with the voice synthesizer which will allow him to do much more then just the three channels. I don't know about recent rigs, but I remember it being an available option on the TW-4000A, which includes two meters also.

Another possibility is one of the thumbwheel programmed rigs. A Braille mark on each thumbwheel would provide a reference.

You see, I don't recall very many crystal UHF ham radios except for GE/Motorola/RCA, and those are a little ancient and cumbersome. Also very cheap these days, I have to admit.

I have had a fun winter restoring four Drake UV-3's to new condition. Winter still has a few months left so if anyone has one of these rigs sitting dead on a shelf that they would like to put back in service, let me know. I am looking for a project.

Thanks

Steve

In fact, my friend's 706 has a voice synthesizer, which is useful to him on HF where there really isn't much of an alternative. But on VHF/UHF, you would rather just go 2 clicks and be there. He has, if I recall, around 2 dozen channels programmed, but he also operates HF. Clicking past the broadcast channel is a little more convenient than pressing the "talk the frequency" button and waiting to hear the droning voice.

..

Excuse my ignorance, but just what is a "regelbarer" BFO? Seriously,
I've never heard of that term/circuit, but then again I'm sure I haven't
been exposed to all BFO circuits.

Does anyone have any info on the All-Star receiver from 1934-35? It is mentioned on the last page of Moore's 'Communications Receivers', 2nd Edition. Does it appear in any of the service compendia (Rider's, Beitman, etc.)?

Does anyone have one of these?

TIA Leigh W3NLB

This receiver is similar to the Rohde Schwartz receiver EK-07.
It uses 25 tubes and employs a Wadley-loop resulting in a very good
frequency stability. This receiver was used as the main receiver on
ships and for surveillance. As far as Ostermann book it missed some
good receivers including this one.

Hank,
A while back, Vaco was bought by Klein Tools (famous for their
linesman's tools). They still make the sets with the separate
handle. One source that I found from a bit of Googling:

http://www.mytoolstore.com/klein/kln22a.html

They have the handles available as separate items.

# 1231. Heathkit HO-13 HamScan questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-13 15:46:55 UTC
From: Mark@The.Toob
Message-ID: <rafn4v42rqispvcjgk7a76rnurkofqhj2a@4ax.com>
Source record: 34354

Howdy!

I recently ran across an HO-13 panadapter at a swap meet. It came with only a few pages out of the manual -- just enough enough to tell me it could originally be set up for a variety of I.F. input frequencies, selectable by use of different sets of a coil, two capacitors, and
two resistors. It appears to be set up now around an I.F. input frequency of 5730 kHz or so -- I swept a sig-gen around the various I.F. choices until I got a centered pip with the controls set to positions that made sense. I'd like to set it up for 455 kHz input for use with a 390A. etc.

Questions:

Does anyone know the inductance value and physical location in the circuit of oscillator coil L3? The Heathkit part number for the 455kHz coil was 40-775. I figure since it is associated with the 6EA8 sweep oscillator/mixer, it should be the adjustable loopstick coil at upper left (looking at the chassis underside with the controls to the right). The current coil has "40-776" on it which is puzzling because it's on the chart, but shown as used for the 3000-3395 kHz input range.

Same for the physical locations of R1, R2, C3, and C4? (I have the necessary values from the chart). I *think* I've found C3 and C4 in my unit (470pf and 56pf micas, which are on the chart for a wide variety of I.F. inputs).

Might a standard 455 KHz loopstick coil work for L3?

## 1232. Ferrite slugs for TS-520 coil pack

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-13 16:35:23 UTC
From: George McCouch <K3UD@charter.net>
Message-ID: <K3UD-18259A.10351513022003@news.uswest.net>
Source record: 34355

I have acquired a Kenwood TS-520s that I would like to put into service. Someone had attempted to "tune" the slugs in the coil pack, (located on the bottom of the rig, with access holes conveniently located for those with a golden screwdriver) and damaged many of them which will have to be replaced.

Anyone have information on the size and threading, and possibly a source of supply? Any suggestions on getting damaged slug out of the coils?

Thanks
George

>It uses 25 tubes and employs a Wadley-loop resulting in a very good
>frequency stability

I just checked the eBay listing, and this is one gorgeous answer to Racal's finest!
Includes an outboard SSB detector and panadapter or RTTY decoder (it has a small scope CRT).

There seems to be a bad tube in the PLL (? in a Wadley set? Well, somewhere in the front end) and maybe some parts missing (my German is limited).

So far, no bids, opening bid of one Euro (about one US dollar)! The 50 kg (110 lbs) weight must be keeping collectors away. This one could have keept the Bismark from drifting away :-) 73, Mike K.

Source record: 34362
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS: A nice Hallicrafters SX-100 Shortwave Receiver. It is in very good condition, all original knobs, very nice front panel and case, no extra holes or known modifications. It hears well on all bands and the calibration seems to be right on for an old tube receiver. I think you'll have a hard time finding another SX-100 that is in this good condition.

I don't have the manual handy (the original manual will be included as soon as I find it again), but I think this particular receiver version is the SX-100 MK I, according to the front page of the manual, if I remember correctly. $250 plus shipping from Oregon.

If you're seriously interested, I'll take some .jpg pictures of it that I can email. It can also be brought to the ham swap meet in Rickreall, Oregon this Saturday 2/15, or to the ham swap meet in Puyallup, WA next month.

Hi George; I've never tackled a 520 but I've done my share of FT-101's. The slugs at their age are practically solid. Most were held by a wax compound and could be " moved " with a bit of heat first. That being said, I've also broken the tops using that technique as well. Best advice I can offer is if it really doesn't need to be touched and the rig performance is ok, don't do it. Keith, VE3JKC.

Jim - you don't want a fix! What you are seeing is the normal 800 offset shift of the transmit frequency. Unlike some other transceivers (TS 440 for example) the TS 820 es 830 shows the actual location of the carrier on TX and the actual frequency of the BFO on RX. If the TX did not shift, your BFO would be zero with the other stations and you would not hear him.

Just remember that to set the CW TX frequency to an even value (7050 for example) you would tune the RX to 7049.2.This corresponds to tuning a separate RX 800 hz lower so you could hear a 800 hz beat note.

On the other hand on many modern digital transceivers (TS-440 for example) the counter shows the TX frequency all the time. The actual frequency of the BFO is 800 (or jumper selectable to 400) below this. Thus if you tuned a CW signal to zero beat that was actually on 7050. The counter would read 7050.8. You can verify this by playing with WWV during the period they are not transmitting a tone.

I have a shack full of old tube boatanchors and they all work like a TS-830. I like it better this way because you have a true picture of where the signals really are. I also have a TS-440 and have to keep my head on straight when using it.

Now - at the risk of confusing the issue further. A trick for changing the CW offset of a TS 830 to other than 800 hz. is to move the RIT up .4 for example. Then move the bandpass down (counter clockwise) by 400 hz. Then a cw beat that is in the peak of the filter is then at 400 hz rather than 800. This is more pleasant to my ears. You can set the .4 RIT by tuning an even frequency with RIT off, then turning it on and moving the displayed frequency up by .4.

Hope that clears things up for you. A few minutes with a 50s boatanchor RX/TX pair would make this all more understandable HI. But the bottom line is that the radio is working correctly just as it was built.

Good luck. My TS 830 is one of my favorite rigs in a shack very full of rigs hi. One of things that makes the TS 830 great is that it is not really a digital radio. It is an analog radio with a digital counter and some phase locked loops for the HF oscillators. Thus it does not suffer from some of the problems of more modern digital radios. As a result, the receiver is one of the best of breed for its day.

It's supposed to do that. In reality, there is an 800 herz offset between the sound of the CW and the frequency you transmit on when you key down. Older radios like the TS-830 actually show this when you key. On newer radios, apparently the manufacturers thought this was confusing and so have the radios programmed to show just the single frequency.

The August 2001 issue of The OTB (journal of the Antique Wireless Assn.)
carried an article on "testing those big bottles". It described a
breadboard test fixture that applies the necessary operating voltages.
Then you measure DC voltage and current and compare them against the
tube's spec sheet. I don't have any experience in this area, but it looks
like a good alternative to testing them in an actual RF amplifier. I can
send you a copy of the article if you'd like.

Say, how would you rate its successor, the TS-940 with atuo-tune? I haven't run mine on the air much, mostly just use it for listening, but it seems to be a pretty good RX -- holds its own with the R-8 sitting next to it. Though the audio is not as clean, and the AM BW is too wide or too narrow (I need to find one of those AM filters, probably made of hen's teeth by now). 73, Mike K. AA1UK

# 1272. Bad RCA tube seals, metal 6L7

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-15 21:56:50 UTC
From: Uncle Peter <radioconnectionNO@cox.netSPAM>
Message-ID: <CIy3a.9747$P1.802979@news1.east.cox.net>
Source record: 34295

Just ran across six NOS (69 date code on box) red lettered
RCA 6L7 metal mixers. Five test bad, no emission, while
the sixth does show excellent emission. All the tubes get
warm to the touch. Only thing I can think of is tube seal
leakage that allowed enough air to enter to kill the cathode
emission.

Has anyone run across a batch of defective RCA metal
tubes in the past?

Pete

I have a very clean, and in perfect operating order, Henry 5K Classic console amplifier with 2 3CX1200A7 tubes. 10-80 meters. This amplifier is no longer in production due to personnel shortages at the Henry factory. It is not known when the factory will resume production.
I am in the Los Angeles area, but I can ship via truck anywhere in the continental U.S.

Asking $3495.00 plus packaging by the Henry factory here in Los Angeles.

Message-ID: <v4u8mq3ol9f8fb@corp.supernews.com>
Source record: 34301

Hi..
I have an EH Scott SLH-H
I also have an old speaker form a Airline radio. The speaker has a transformer with a 5 pin plug. There are 5 wires on the plug. 3 white, 1 green and 1 black or dark gray.
The Scott has 6 screw connections reading..
1-600
2-300
3-200
4-160
5-120
6 + (plus) and - Negative
Any help would be appreciated. Jos
Can I use this speaker for this radio? I have not hooked up a transfromer type speaker before

## 1279. Drogue Patterns

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-16 09:58:28 UTC
From: William Reddick <Lake.wendouree@ncable.net.au>

Source record: 34302

Am looking for a pattern to make drogue for 12-14ft aliuminium boat.

Have tried buying commercial sea anchor and find it to be inadequate for controlling drift whilst fishing. It does not slow the boat enough.

Have heard that one can be made using lightweight tent style nylon but not sure how to construct it so that it 'fills' correctly to hold up the boat.

Any help greatly appreciated.

Drogues or sea-anchors don't control drift.. they help maintain a seaworthy heading in difficult conditions. They also help control wave slip and surface blow. A sea anchor or drogue won't do spit for currents (electrical or nautical). Think about it... the boat and the drogue are moving (current drift) in an identical environment. There's no vector differential between the drogue and the boat, so no drag. Now, if you want to procure a 1943 Bendix or Western Electric boatanchor... that WILL stop your drifting while fishing!!!!!

Sprayberry! Wow! I didn't know anyone else remembered them.
I "took" their "Radio Mechanics" course from a box of their study manuals that my Dad had and it was a good course.
The business about taking the sharp edge off the needle was directed at the steel needles that were in profusion in the 1930s. By the 1950s softer alloys were being used and even pine needles (I still have a package) were sold for 78 RPM players.
As for the radio stations playing 78s...I was a Chief Engineer and Program Director back in the 1960s. Remember that, during that period, radio was a lot more creative than it is now. It was not only common for the major market stations to re-gear their turntables to play 45 RPM records at 50 RPM and 33 1/3 RPM records at 36 RPM...but one station I was with had a popular request show in which 78s were played right alongside the more popular 45 and 33 1/3 records of the day.
It is unfortunate that radio has become such a sterile media today because all you're going to hear is a narrow window of music dictated by whatever is available on CDs. But back then you played everything. Remember too that it was only 10 year earlier that "Hit Parade" records were being produced on 78s so if a station wanted to play an old Rosemary Clooney hit from the 1950s it would either have to pull it from a compilation album or the original 78.
Ah, the 60s!

All my best,

Vern Weiss, W9STB
All vintage-All CW

Message-ID: <xjR3a.17116$Lh5.878995@twister.austin.rr.com>
Source record: 34318

Selling my collection.

Yaesu FR-DX400 receiver. Super clean and functions great- has optional 2 and 6 meter boards installed along with the FM board. $295.00 with W7FG manual.

Yaesu FL-DX400 Transmitter- Super clean and functions great. $250.00 with W7FG manual and connecting cable to receiver.

Yaesu FL-DX2000. Nice clean amp with good tubes and producing 600+ watts RF Out. $295.00 with W7FG manual.

Kenwood TS-520SE - Excellent/Excellent condition, has CW filter. No mic or manual. $275.00.

Yaesu FC-301 Antenna Tuner. Very nice (repainted cabinet) and fully functional. Clean. $85.00 Email me for pictures. k5fng@arrl.net

Paypal ok. Would prefer a local pickup because I work a lot of hours and the Post Office/UPS is not accessable during the day. I will however do what has to be done to get them out quickly if needed. You pay shipping....

## 1296. Repairable SX-100 to a good home

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-16 20:30:50 UTC
From: Dave Moorman <davemoorman@attbi.com>
Message-ID: <davemoorman-D84F7B.14320616022003@netnews.attbi.com>
Source record: 34319

I have a partially disassembled SX-100 available. The SX-100 worked before I began, so everything is there and in functioning condition. Cosmetics are OK but not great. Calibrator is present and working, etc.

Started rebuilding it but got sidetracked into an SX-101A. Seem to have lost the desire to rebuild the SX-100 and would like to find a good home for it. I could use the space and may be acquiring an SX-42 that will need quite a bit of work.

QTH is in west suburban Chicago and I'd like to avoid packing and shipping it. Local pickup preferred.

Anything over $70 is OK.

Email or post.

Well, technically you are right, but the legal limit
is 1500 watts PEP. Running AM and factoring
in the sidebands, the unmodulated carrier output should
be no more than 375 watts.

Hi Joe,
I can't reply direct to your note. (Good spam filter?)

Hi Joe,
Wonderful, I think that is what I've been looking for. I'd really appreciate
a copy of that article. Let me know if you can scan it, or if not, your
address and I'll send something to cover copying/mail costs.
Thanks again,
Keith, ve3gem

## 1302. Hammarlund HQ100 Cabinet Restoration

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-17 01:20:52 UTC
From: Vlad <vatryzek@yahoo.com>
Message-ID: <UNW3a.141078$HN5.589866@rwcrnsc51.ops.asp.att.net>
Source record: 34325

I just got a Hammarlund HQ100 that was stored in a cellar and as a result the front part of the cabinet is damaged. The painted as well as the unpainted areas have what looks like aluminum oxidation on them. What is the best way to restore this cabinet?

# 1303. Re: Wanted 1KW AM TRANSMITTER In Florida

is 1500 watts PEP. Running AM and factoring
in the sidebands, the unmodulated carrier output should
be no more than 375 watts.

73, Phil
W5BVB >>

I can't find the start of this thread. What band has a 375 Watt unmodulated carrier limit? Why are you using a SSB, 1500 Watt PEP limit to discuss unmodulated carrier level?

Don

## 1304. Transmitting tube manual?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-17 01:57:53 UTC

# 1321. PAINT: B&W5100

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-17 03:39:42 UTC
From: NOSPAMk0dan@comcast.net
Message-ID: <3e505928.1204384313@news.mo.comcast.giganews.com>
Source record: 34244

I recently acquired a B&W 5100. The friendly freight carrier drop kicked it off the truck and crunched the corner of the transmitter, broke some tubes, etc.No other apparent damage (altho they continue to screw me around on the ample extra insurance purchsed....that's another rant & rave).

Well, the local body shop pounded out the crumpled corner for $50, however some of the paint (grey base, and white trim) was inevitably cracked off. The effected area is perhaps two square inches, plus a few linear inches of the white trim. The metal is bare right now, has not yet developed oxidation, and needs to be painted.

I do not wish to repaint the whole panel, but need to protect the metal and hopefully do a half decent job matching the paint. Ditto on the white trim, which will be even more difficult, but probably owrth a try.

Any suggestions on paint selection and method of application?

Thanks and 73

No band has a 375 watt unmodulated carrier limit.

The 1500 watt PEP limit applies to all emissions. Of
course, the limit is less on certain bands.

It isn't only SSB that has peaks. Remember how
sidebands are generated? You modulate a carrier
and then filter out the carrier leaving only the sidebands.
Another way to look at AM is DSB (double side band)
with carrier.

Anyway, generating an unmodulated carrier with 375
watts output, then modulating it at 100% using AM
modulation will result in a 1500 watt PEP max output.

Jeez guys, this was discussed some years ago by the ARRL when the FCC changed the power limit rules....
In the USA, for the Amateur service, the maximum power output for ANY mode is 1500 PEP.

If an AM carrier is modulated to 100%, the peak envelope power is approximately 4 times the carrier power. Any engineering reference book on modulation techniques will discuss this.

Thus under 100% modulation the PEP output of a 375 watt carrier is 1500 watts. If you are running an AM transmitter at 375 watts of carrier output power and modulating it at 100%, you are at the legal limit.

At the time this was passed by the FCC, the AM guys on 3885 KHz really howled.

Doug/WA1TUT

Anyone parting out an SX-101 or SX-101A?

I'm looking for one of the little spring-metal clips that
holds the outer dial glass in place on the back side of
the front panel bezel. Not sure what the "official" name
of this part is, but if you have one, then you know what
part I'm talking about. I just need one of them.

Thanks and 73,
Dean K5DH

## 1332. Marantz 2500

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-17 16:15:29 UTC
From: Mike Hagerty <mhagerty@mako.com>
Message-ID: <3e5108e6_1@newsfeed>
Source record: 34255

Greetings to all. I have a Marantz 2500 that just quit working.
There is no power to the speakers. The relays click 5 seconds after
power on, all lamps, indicators, cooling fans and CRT "O-scope" are
working. The CRT displays a source signal or tuner signal input and all
CRT tuning modes work. There are 10 fuses and 2 relays I can see and
all are showing good. There is no detectable sound from the speaker
output, no scratching, clicking, hissing, popping or humming, nothing
from either channel. Does anybody out there have schematics ?
Thanks in advance for your time and consideration.
Mike H.

>At the time this was passed by the FCC, the AM guys on 3885 KHz really
>howled.

It would seem that under the new rules, the maximum AM power would be cut in
half, or -3 dB, which may or may not be worht howling over, depending on
whether the other guys on the adjacent frequency are observing the new rules
too.

Since AM rigs are typically adjusted by DC plate power input, not RF output,
you figure the Class C output stage is 75% efficient at best. Tune for 500 W
input, then you will have 375 W out, the new legal limit for unmod carrier.

Maybe those Big Iron rigs and their final tubes will last a little longer this
way?

I have for sale a nice looking Swan 500 HF Transceiver. It appears to be complete including the final tubes. There is a copy of the manual. This gear belongs to a friend of mine who is liquidating his ham gear due to illness. Price is $75.
I am also selling the matching 117XC AC Power Supply and Speaker Console. This also looks good, but there is no AC power cable included. There is a manual. Price is $65.
Finally, there is a Swan VX-2 Vox unit for sale for $30. It looks new.
I will sell items separately or as a package. Package Price is $145 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

# 1345. FS: Robyn Digital 500A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-18 01:56:43 UTC
From: msix@nmia.com
Message-ID: <vpg4a.7912$0q5.1500@fe01.atl2.webusenet.com>
Source record: 34268

Clean, attractive Robyn Digital 500A.
Matching external VFO for DX split operation.
Matching heavy-duty Power Supply.

Early 70's 6-band 80-11-10M SSB/CW 500 Watt DC input transceiver.
Individual LSB, USB and CW filters. RIT. Sidetone. Digital dials
in transceiver and external VFO using nixie tubes.

One of the earliest hybrids using bipolars in all low-level stages,
tubes in the receiver front end, transmitter driver and finals.
The 500A was an update of the original 500 and the forerunner of
the SideBand Engineers SBE-36.
Many were sold in Asia for both ham and commercial use, but few
sold in North America.

All 9+ in and out. Excellent condition.
Stored inside 10+ yrs. No rust, no rot, no smoke. All stock.

Receiver works. Transmitter needs alignment/work.
All tubes good. All nixie tube readouts good.

Includes manual and pair of spare 6KD6 final tubes.

$350 pickup, $392 pp 48 for double-boxed foam-pellet packing,
insurance, and UPS shipping.

# 1348. Re: Wanted 1KW AM TRANSMITTER In Florida

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-18 02:40:44 UTC
From: Gary Schafer <gaschafer@attbi.com>
Message-ID: <sf635v0drq2av4mc51g1fe3gljfku49t81@4ax.com>
Source record: 34271

Not only did AM loose power, so did SSB but nobody realized it.

The old way of measuring SSB power was 1 kw DC input. That was
equivalent to around 3000 to 5000 watts PEP input or more. At 60%
efficient that would give a PEP output of from 1800 to 3000 watts PEP
output or more.

The old thinking was that PEP was automatically 2 times DC or average
power. That was of course only true with a two tone test signal. PEP
of voice is much higher than two times average voice power.

Back then however there were few amateur transmitters capable of much
more than 2 kw input.

Source record: 34273

Oops, Just found out why this message did not appear in the intended group.
My apologies for the error in posting.

It has been interesting however to observe how terms and language can
confused between similar but different activities.

In fishing there are time when a slow drift allows us to fish 'fresh' water,
particularly when casting lures and flies. However sometimes the wind causes
the boat to drift to quickly for safety and/or fishing. In my case fishing
is usually in inland waters.

Using some form of parachute style device helps increase 'resistance' by
increasing effective surface area in contact with the water. The vessel
movement due to wind activity is 'slowed'.

Again apologies for posting error. rec.boats is just above this list in the
subscription list. I originally subscribed to this list out of curiosity to
see what it is about.

# 1351. (Europe) Collins 75A4 with all filters For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-18 10:07:09 UTC
From: g4vgo <rmread@attglobal.net>
Message-ID: <3e52096b_2@news2.prserv.net>
Source record: 34274

Too much radio, too little desk space forces reluctant sale of Collins 75A4 receiver, with Collins 3.1 mechanical filter and after market 2.1 and .5 KHz filters. After market 4:1 reduction tuning, 240 VAC power transformer fitted professionally.

The Electric Radio 75A4 compendium is included, as is a yet-to-be fitted new dial drum decal for the main tuning. A manual is included as will a complete set of spare valves.

This receiver is a pleasure to use, and if you have the space, you can give it a good home. Not a CCA item, a good solid workhorse of a receiver.

See the 75A4 on my web site. It is a very good performer and will compliment any A.M. boatanchor station, or use it as an external receiver for DX spotting.

£550 plus shipping from Suffolk, UK.

Thanks

Bob G4VGO
www.qsl.net/g4vgo

## 1352. General Coverage Receivers

Newsgroup: rec.radio.amateur.boatanchors

From: jwodell@provide.net
Message-ID: <3e521d63.669723@news.provide.net>
Source record: 34275

I've been trying to find a decent communications receiver for months
-- something like an NC183D, SX-122, HQ-180, etc., etc. But they
seem to have dried up. Things like the R 8500 just don't have the
audio.

So I goes me up to the internet and looked for Harris stuff. It's only

money. But they don't seem to make them any more, and
I find few used ones.

Just want something that doesn't sound like a little bitty handy
talkie. Maybe my only option is the Ten Tec 340 (I think).

Comments would make me happy! Gettin too old I guess

I have for sale a National RCK receiver which I purchased years ago, but I never got around to restoring it. This appears to be a rack mount model and has a slide-on cover which covers both the top and the bottom of this unit. The panel above the radio holds a speaker, and the brackets that hold the receiver and speaker panel together have National emblems on them. Looks like it covers 200 to 400 kHz and 1.3 to 30 MHz. Overall physical condition of this radio is fair to good. It needs a good cleaning! Receiver looks complete. All of the knobs look original. Since I do not have a variac available, I did not try to power it up. It has been in storage for over 10 years, so the new owner may want to make some checks before any power is applied to it.

This radio is very heavy and I will not ship it. Buyer will need to either pick it up or I can meet somewhere within a reasonable driving distance of Allentown, PA. This will give the prospective buyer a good chance to carefully check this radio before purchasing.

A picture of it can be seen at:
http://www.users.fast.net/~n3ab/national1.jpg

More pictures are available by email. Asking $100.00. Cash, money order or cashiers check preferred. Please email me if you have questions. Thanks for reading.

Why not try a transceiver like the 930/940 or the 1000MP with an AM filter?
Or visit rec.radio.shortwave
for a Sony 2010 or SW-77 or an NRD or a Drake R-8?

Of course the TenTec 340 is a superb receiver, but it is a tad expensive.

Also, don't overlook the Racal 6790/GM; these are right around the 1000 dollar mark right now, and you are getting a receiver that was in the 5000 to 6000 dollar range. Still, for audio, the Palstar R30 is the best sounding one, very similar to the old Collins R388s in audio quality and AGC characteristics. Not bells and whistles on this one, though.

Pete

The FCC is presently conducting hearings concerning new regulations allowing this situation to become even worse than it already is. Among other regs, they want to allow newspapers to also own radio stations in the same markets, thus allowing even more consolidation to occur.

NPR did a short blurb on it this morning, and the Center For Public Integrity (on the web, not sure of the address) is following the story closely. It wouldn't hurt to fire off a letter or email to your Senator/Congressman concerning this one.

Then, when you mention the deplorable situation, you also have the satisfaction of knowing that at least you did your part to try and stop it from getting worse ;-)

Regard to All,

John C.

# 1375. FS Hammarlund SP-600-JX26 Receiver

I have for sale a very nice Hammarlund SP-600-JX26 Communications Receiver. It works great, no mods, and I have the original manual. No cabinet. It does have the bottom cover. Digital pictures are available for serious potential buyers.
The receiver is heavy and I am not crazy about shipping it, so preference goes to those who will come and get it in Abilene, Texas or I can meet someone within a reasonable distance of Abilene. Price is $425. Thanks,
Charlie Hugg, K5MBX

## 1379. Ballast tube Information?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-19 14:30:18 UTC
From: COLIN LAMB <k7fm@teleport.com>
Message-ID: <_xM4a.9697$_c6.1006346@newsread2.prod.itd.earthlink.net>
Source record: 34202

I have a few old odd ball ballast tubes and would like to know the characteristics of each. Is there a listing somewhere that list the individual characteristics of each.

For example, I have a couple of 3TFV4 ballasts and would like to know if they are similar to the 3TF4. Cannot find a listing. Also have some really old ballasts in original box.

Did a Google search and could not find anything.

Thanks, Colin K7FM

>73, Phil

Depends entirely on the voice characteristics of the speaker, and on the percent positive and negative modulation, which again will be a function of the voice.

Someone could have 50% positive modulation and 150% negative. The the formula for 8 X 375W carrier = 1500 watts p.e.p. out might not be true any longer.

It's quite possible that a 1 KW AM transmitter could be completely legal. For example: Let's say that the final RF amplifier of that KW rig is running at 850 watts DC input. It is grounded cathode and has an efficiency of 60% - That's 510 watts out so far. then add some feed line loss or other loss of say, 2 dB, some modulation that is less than 100% and in no time it could be down well below 1500 watts p.e.p. output.

Do you think the FCC is going around with "AM OP DETECTOR VANS" visiting folks to check whether their emission peaks are at 1500 watts p.e.p.?

Or is this just a fun topic for "AM Bashers" to harp on?

I work FM and slop bucket too, but AM almost always sounds better!

>Anyway, generating an unmodulated carrier with 375
>watts output, then modulating it at 100% using AM
>modulation will result in a 1500 watt PEP max output.

That is true if it is a symetrical sine wave.
You would STILL only approach the legal limit IF you hit a 100%
mod peak.

Are you bringing this up to "warn" the gentleman who is asking to buy
a 1 KW transmitter?

Do you not think he could run it at 1500 watts p.e.p. ouput if he
wished to do so?

It's not illegal to OWN a transmitter capable of 3 KW p.e.p.
ouput. I know of a number of contesters with rigs like that.
However, I am SURE that they always reduce the power on them to
1500 watts p.e.p. ouput. You can even see amplifiers and tuners that
are capable of 3 or 4 KW out, advertised routinely in the ham trade
rags.

So if we are suggetsing someone should hound AM ops that stray into
an occasional voice peak of 1520 watts p.e.p. then the same shou;d
apply to everyone.

As an aside... what about the CB ops who are allowed ZERO watts
p.e.p. Not trying top relate this to the above topic, BUT if congress
EVER buys the FCC any enforcement vans they should start with some of
THOSE malicious law breakers rather than harping on hams about minor
infractions.

Jus' my opinion, yer honner!

on 27.800 to 27.999 but routinely operate there?

ROFLMAO! When I was a Cal Tech in the Navy, I changed many an output attenuator that had been transmitted into. That little 1/10th watt resistor just couldn't handle any power at all. Got so I could change and adjust an atttenuator in less than an hour!

Dave in San Diego

Source record: 34239

You haven't lived until you have used a TCS to transmit CW!
They are full break in, and have this monster relay that has to
clack for each and every dot or dash. It sounds like a pinball
machine.

TCS was my first rig. Some days, I wish I had kept it, but most
days, I am very glad it is gone! The receiver was absolutely lousy.
You had to replace the 6SK7's with a loctal 717 to get any sensitivity
out of it at all. The dial was way too fast for tuning anything but
AM, the bandwidth was too wide for anything but AM. It was basically
an AA5 arrangement with 12V filaments.

Antique Electronic Supply sells a very comprehensive ballast tube
reference manual for $20 (I think). http://www.tubesandmore.com

It lists both the 3TF4 and 3TFV4, very similar:

3TF4 4.3 - 8.3 volts 280 - 320 ma
3TFV4 4.0 - 8.5 volts 280 - 320 ma

i.e., the V has a slightly wider regulating voltage range, same
current rating and same base as the non-V.

# 1425. FA: AM-6155/GRT-22 FAA Surplus Linear power amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-20 22:48:50 UTC
From: ga_boneyard <ga_boneyard@hotmail.com>
Message-ID: <mXc5a.46081$4F3.2869627@news2.east.cox.net>
Source record: 34148
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

AM-6155/GRT-22 FAA Surplus Linear power amp, Specs: 225-400MHz, 50W out (conservative) 10W in, Eimac X651Z/8930 final, extensive metering, can be converted to 2m, 220 or 432, rack mount 7" high, 80 lbs, ITT (model 3212), Part of AN/GRT-22. This Amp uses Emiac X651Z/8930 in silver-plated cavity-drawer; 175-turn TUNE counter dial. Main chassis has solid-state power supply and buffer amp/mulitplier; panel meter monitors voltages. Requires 105/120/210/240 VAC 50-400 Hz and +20 V req 60 ma. +20 V keyed; 7x19x18.5, 80 lbs shipping weight. The HV Supply from AM-6154 is Loaded with GREAT parts to include a 1752V at 270ma transformer, 8HY 300ma choke, 100K ohm 95 watt resistor, 2x5mfd 3KVDC capacitor, & rectifier circuits card. Most hams use these amps as a 2m or 220 Mhz or 432 Mhz Linear. After conversion, the output power is approximately 400 watts. One ham has used a 4CX400A (available from Svetlana)to raise the output power to 450 Watts. Do a Google search of AM-6155 and you will find many references to conversion information. Used - Excellant Condition (NOT TESTED) but sold AS-IS.. Email if you have any questions. Buyer will pay shipping (approx 90 lbs) from zip 31088 and a packing charge of $20.00. I will ensure the item is packed to survive the trip!

Planning to publish the following mods on my site soon, some have been available on other sites for some time. But a lot of my mods have been presented in a way I don't like where the schematic or text information miss

1) Block schematic
2) logarithmic S-meter using MC3356
3) IF frequency information
4) Noise figure calculation chart
5) reduced RIT range
6) antenna rewiring
7) Line output amplifier
8) TX- level equalizing for FT-902
9) SSB filter in cw mode
10) Transverter output modifications
11) FT-902 Mode dependent RIT
12) FT902-keying.
13) Improving FT-902 speech processor

Cannot give complete details for all mods since most were carried out in 1988

Reminds me of the Heathkit grid dip meter - you could FM it by yelling
at the housing.

I have two hp 608s, one restored to pristine condx., but the main tuning
dial gets a "detent" in it if left in one spot too long. One of the
HP service techs said the grease hardens in the mechanism.

But with one diode, a resistor (maybe two), and a capacitor, one could make the relayS (plural) hold across key-up's for a second or two, thus making for a fairly QUIET QSK (except for a clunk at the beginning and ending of each QSO).

I still have two almost complete sets (discarded the base-plates years ago), including one with dynamotor. Haven't put one on the air since the WARC bands became available (used a BC-221 freq meter to ensure I was in the 30-meter band!)

# 1452. HW-101 ALC problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-22 07:06:24 UTC
From: n2cqr@clix.pt
Message-ID: <97f305da.0302212306.5b933cb7@posting.google.com>
Source record: 34175

I've resurrected my old Heath HW-101. I'm using it with a D-104 mic, with the transistor amp in the base.

I notice that when I run the rig on SSB with the Driver, Final and Load controls set for pek output (set in the Tune position) I get lots of ALC action (6-9 on the meter) and relatively low output.

But I've found that if I de-tune the driver control (it tunes the driver grid and plate), I can get a significant decrease in ALC and a noticeable increase in output.

I checked to see if I could get a similar effect by running the rig at the peak output settings, and just turning down the mic gain. This will indeed reduce the ALC, but it also significantly reduces power out.

Any thoughts on what is going on here? Could there be something in the D-104 output that is causing the ALC to kickup, reducing output?

Thanks,
Bill

Source record: 34177

Bill, I have a very very nice Valiant that I've been considering parting with. You can see it on my website. I have 2 of them, this one is shown with an SP-600 beside it, as I recall. The one next to the R-390A or a 75A4 is not the one. I've rearranged the shack, since the photos. The unit is fully operational and on the air at this time. It has 3B28s in the HV PS and has most of the ER audio mods and the VFO screen resistor mod (of course). The cabinet was done by W4PNT (Dee) and is superb (some say too good). The kicker is, I'm in Maryland and can't (won't) ship the thing. I have 2 scrap Valiants that were shipped and didn't make the trip. The iron rips out of the chassis and makes a mess of things. Johnson crated and trucked the factory wired units way back when. I have no idea how the other fellows get away with not crating. I'm going to ask about $700 for the unit or trade. Let me know if you have any interest. Regards de Jeep/K3HVG

I'm not sure that would work. If I recall correctly,
the TCS kept its master oscillator running at all times, and
the relays keyed the antenna, and the plate voltage on the
finals. Stop the relays from clacking at every key closure,
and the tone would just stay on.

Source record: 34180

The "CB" D104 with the amp in the base puts out WAY too much signal
for the HW101. The HW101 has all the preamp it needs to run with a
dynamic microphone, or crystal microphone.

Secondly, when the HW101 is putting out a good clean 100W PEP signal,
normal voice peaks will barely kick the ALC meter. It isn't supposed to
hammer away at full scale. It is a very slow, sluggish, meter.

The HW101 is one of the first rigs I used when I got my license.
Always wanted an SB102, though.

Better still would be to go to grid block keying.

Someone once gave me a Collins ART-13 at a hamfest

I added two banana jacks in the rear perf. panel (no holes drilled!)
These connected to the grid block circuitry and bingo, it worked very
well.

FOR SALE:

Hallicrafters S-53 Receiver available for $38.00
It's all there. All original knobs etc.
Non working - requires some restoration.

It comes with a SAMS manual with all voltage charts, alignment
instructions, dial stringing guide etc.
It also comes with a reel of dial string (you would need this)
and is complete. Restoration required, but should be easily done.

Also comes with a Gernsback booklet on how to restore these older
Hallicrafters series receivers.

Photo and details at:
http://www.gizba.com/x/sidevalve/radios.htm

E-mal me to arrange purchase.

# 1466. Yaesu FT-901/902 mods

Source record: 34189

Planning to publish the following mods on my site soon, some have been
available on other sites for some time. But a lot of my mods have been
presented in a way I don't like where the schematic or text
information miss

1) Block schematic for IF part of the transceiver
2) logarithmic S-meter using MC3356
3) IF frequency information
4) reduced RIT range
5) antenna rewiring
6) Line output amplifier
7) TX- level equalizing for FT-902
8) SSB filter in cw mode
9) Transverter output modifications
10) FT-902 Mode dependent RIT
11) FT902-keying.
12) Improving FT-902 speech processor

Cannot give complete details for all mods since most were carried out
in 1988. Pse excuse me, I am only a beginner in making sites

Hi to all
Looking for two XTALS, one in the range of 3050-3150, and the other from 7050-7150. I need to test my restored DX-35. (F243 holders) Any help greatly appreciated.

Thanks in advance for all responses

Hi to all,
Does anyone know if Gonset ever made a speaker for their receivers, IE: G33, G63 ? Or should I give up on my quest to locate one to match my Gonset station?

Thanks to all

I don't know the seller and I have no connection with this auction.

There is an all-caps Underwood manual typewriter for sale on eBay.
These typewriters were used by telegraphers so they could type in all
caps and not have to unshift to type numbers. I used to lust after one
of these but I've never actually seen one. If you collect CW stuff or
have a 20s-50s vintage station, this might make a nice accessory. It's
certainly not a common item. Again, I don't know anything about this
particular unit or the seller, I just noticed it and thought someone
might be interested.

>TURN SIX DOLLARS INTO SIX THOUSAND QUICK AND EASY! WOW IT REALLY WORKS!!!
>:
>*** READING THIS COULD CHANGE YOUR LIFE! IT DOES WORK! I found this on a
>bulletin board and decided to try it. Alittle while back, I was browsing
>through newsgroups, just like you are now, and came across an article
>similar to this that said you could make thousands of dollars within weeks
>with only an initial investment of $6.00! So I thought, "Yeah right, this
>must be a scam", but like most of us, I was curious, so I kept reading.
>Anyway, it said that you send $1.00 to each of the 6 names and address
>stated in the article. You then place your own name and address in the
>bottom of the list at #6. Post the article (with your name in the #6 spot)
>in at least 200 newsgroups. (There are thousands). No catch, that was it.
>So
>after thinking it over, and talking to a few people first, I thought about
>trying it. I figured: "what have I got to lose except 6 stamps and $6.00,
>right?" Then I invested the measly $6.00. Well GUESS WHAT!? Within 7 days,
>I
>started getting money in the mail! I was shocked! I figured it would end
>soon, but the money just kept coming in. In my first week, I made about
>$25.00. By the end of the second week I had made a total of over $1,000.00!
>In the third week I had over $10,000.00 and it's still growing. This is
>now
>my fourth week and I have made a total of just over $42,000.00 and it's
>still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have
>spent more than that on lunch!! Let me tell you how this works and most
>importantly, WHY it works... Also, make sure you print a copy of this
>article NOW, so you can get the information off of it as you need it. I
>promise you that if you follow the directions exactly, that you will start
>making more money than you thought possible by doing something so easy!
>:
>Suggestion: READ THIS ENTIRE MESSAGE CAREFULLY!! Print it out or download

>it. Follow the simple directions and watch the money come in! : It's easy.
>It's legal. And, your investment is only $6.00 (Plus postage) : IMPORTANT:
>This is not a rip-off; it is not indecent; it is not illegal; and, it's
>99%
>risk-free. Best of all-- it really works! : If all of the following
>instructions are adhered to, you will receive extraordinary dividends. :
>PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more
>can
>be yours in 20 to 60 days. This program remains successful because of the
>honesty and integrity of the participants. PLEASE CONTINUE IN ITS SUCCESS
>BY
>CAREFULLY ADHERING TO THE INSTRUCTIONS. : You will now become part of the
>Mail Order business. In this business your product is not solid and
>tangible, it's a service. You are in the business of developing Mailing
>Lists. Many large corporations are happy to pay big bucks for quality lists.
>However, the money made from the mailing lists is secondary to the income
>which is made from people like you and me asking to be included in that
>list. Here are the 4 easy steps to success: :
>STEP 1: Get 6 separate pieces of paper and write the following on each piece
>of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 and place
>ONE inside EACH of the 6 pieces of paper so the it will not be seen through
>the envelope (to prevent thievery). Next, place one paper in each of the
>6
>envelopes and seal them. You should now have 6 sealed envelopes, each with
>a
>piece of paper stating the above phrase, your name and address, and $1.00.
>What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You
>are
>requesting a legitimate service and you are paying for it! Like most of
>us I
>was a little skeptical and a little worried about the legal aspects of it
>all. So I checked it out with the U.S. Post Office (1-800-725-2161) and
>they
>confirmed that it is indeed legal. Mail the 6 envelopes to the following
>addresses: : :
>#1) MARIS GERANS L.BISU IELA 16-38, RIGA LV-1002, LATVIA
>#2) JURGIS VELDRE, KALNCIEMA 151-2, RIGA LV 1046, LATVIA
>#3) C.LOCKLEY,2034 FALL MEADOW DR.,MISSOURI CITY,TX. 777459 USA
>#4) RAMON RAMIREZ,12249 VANOWEN ST. #A, NORTH HOLLEYWOOD, CA,91605 USA
>#5) DONALD J MILLER, 1940 ROBIN LANE FLOWER MOUNFD, TX 75028 USA
>#6)CHRIS HARTMON P.O. BOX 251, RONKONKOMA N.Y. 11779-0251 USA
>STEP 2: Now take the #1 name off the list that you see above, move the other
>names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR name as #6 on the
>list.
>STEP 3: Change anything you need to, but try to keep this article as close
>to original as possible. Now, post your amended article to at least 200
>newsgroups. (I think there are close to 24,000 groups) All you need is 200,
>but remember, the more you post, the more money you make! You won't get
>very
>much unless you post like crazy. :) This is perfectly legal! If you have

>any
>doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep
>a copy of these steps for yourself and, whenever you need money, you can
>use
>it again, and again. PLEASE REMEMBER that this program remains successful
>because of the honesty and integrity of the participants and by their
>carefully adhering to the directions. Look at it this way: if you are of
>integrity and honesty, the program will continue and the money that so many
>others have received will come your way. NOTE: You may want to retain every
>name and address sent to you, either on a computer or hard copy and keep
>the
>notes people send you. This VERIFIES that you are truly providing a service.
>(Also, it might be a good idea to wrap the $1 in dark paper to reduce the
>risk of mail theft.) So, as each post is downloaded and the directions
>carefully followed, six members will be reimbursed for their participation
>as a List Developer with one dollar each. Your name will move up the list
>geometrically so that when your name reaches the #1 position you will be
>receiving thousands of dollars in CASH!!! What an opportunity for only
>$6.00 - $1.00 for each of the first six people listed above. Send it now,
>add your own name to the list and you're in business! :
>---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- : Step 1)
>You
>do not need to re-type this entire letter to do your own posting. Simply
>put
>your cursor at the beginning of this letter and drag your cursor to the
>bottom of this document, and select 'copy' from the edit menu. This will
>copy the entire letter into the computer's memory. Step 2) Open a blank
>'notepad' file and place your cursor at the top of the blank page. From
>the
>'edit' menu select 'paste'. This will paste a copy of the letter into
>notepad so that you can add your name to the list. Step 3) Save your new
>notepad file as a .txt file. If you want to do your postings in different
>settings, you'll always have this file to go back to. Step 4) Use Netscape
>or Internet Explorer and try searching for various newsgroups (on-line
>forums, message boards, chat sites, discussions.) Step 5) Visit these
>message boards and post this article as a new message by highlighting the
>text of this letter and selecting paste from the edit menu. Fill in the
>Subject, this will be the header that everyone sees as they scroll through
>the list of postings in a particular group, click the post message button.
>You're done with your first one! Congratulations!!! THAT'S IT! All you have
>to do is jump to different newsgroups and post away, after you get the hang
>of it, it will take about 30 seconds for each newsgroup! : **REMEMBER, THE
>MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT YOU HAVE
>TO
>POST A MINIMUM OF 200** : That's it! You will begin receiving money from
>around the world within days! You may eventually want to rent a P.O.Box
>due
>to the large amount of mail you will receive. If you wish to stay anonymous,
>you can invent a name to use, as long as the postman will deliver it. **JUST
>MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now, each of the 5 persons who

>just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5
>and only 5 persons respond to each of the original 5, that is another $25.00
>for me, now those 25 each make 200 MINIMUM posts with my name at #4 and
>only
>5 replies each, I will bring in an additional $125.00! Now, those 125
>persons turn around and post the MINIMUM 200 with my name at #3 and only
>receive 5 replies each, I will make an additional $625.00! OK, now here
>is
>the fun part, each of those 625 persons post a MINIMUM 200 letters with
>my
>name at #2 and they each only receive 5 replies, that just made me
>$3,125.00!!! Those 3,125 persons will all deliver this message to 200
>newsgroups with my name at #1 and if still 5 persons per 200 newsgroups
>react I will receive $15,625,00! With an original investment of only $6.00!
>AMAZING! When your name is no longer on the list, you just take the latest
>posting in the newsgroups, and send out another $6.00 to names on the list,
>putting your name at number 6 again. And start posting again. The thing
>to
>remember is: do you realize that thousands of people all over the world
>are
>joining the internet and reading these articles everyday?, JUST LIKE YOU
>are
>now!! So, can you afford $6.00 and see if it really works?? I think so...
>People have said, "what if the plan is played out and no one sends you the
>money? So what! What are the chances of that happening when there are tons
>of new honest users and new honest people who are joining the internet and
>newsgroups everyday and are willing to give it a try? Estimates are at
>20,000 to 50,000 new users, every day, with thousands of those joining the
>actual internet. Remember, play FAIRLY and HONESTLY and this will really
>work. : WHAT GOES AROUND, COMES AROUND!!! GOD BLESS ALL

Sorry 'bout the mistake, but the frequency should be 3550-3650.
I hate it when that happens.

Thanks for the responses.

Someone who probably should have known better than to
ignite *magnesium based* pyrotechnics (indoors?) on an
elevated bar room floor bandstand, with a wood based
roofline just a scant 11 feet above the same.

(...sorry guys, I feel sorry for him, but this event stands out as the
most stupid and dangerous band-stunt that I've ever
seen pulled by a band playing in a bar - period. Anyone with even
one-quarter of a brain knows you *never ever* set off pyros
indoors, unless your playing in a *huge* stadium or sports complex
type venue - and even then you have guys standing around the stage
with fire extingushers standing by just in case. )

Truly a loss/waste that never should have been.

These receivers were manufactured by VEB Kopenick and VEB Dabendorf in the
former East Germany (GDR) in the early 1960's. The model is Typ 1340.21.
Circuit-wise it is somewhat similar to the West German Siemens E311 receiver
and not to the Rohde & Schwarz EK 07.
I own one in excellent condition with the original shock mount, cabinet and
manual and it's a very nice working receiver, although it's a bit on the
heavy side... it weighs about 120 lbs. The R&S EK 07 is still heavier...

Well, there aren't too many models or versions. Is it one of the
tube types or solid state ones?

## 1479. Zenith Transoceanic dial cord

Newsgroup: rec.radio.amateur.boatanchors

Does anyone have a description or manual section that tells how to
align or replace a dialcord on one of these? I don't have the exact
model (I know there are about a zillion versions of it), so a general
idea will have to do for now.

Thanks

It is a tube type, with a 6A40 chassis. I believe it is an A600
model based on what littly paperwork I found after my original post.

Message-ID: <Z8%5a.205560$iG3.24035@sccrnsc02>
Source record: 34056

PLEASE:

I need copies of two manuals one for the HG-10B and one for the HW-16. They do not have to be original just photo copies. I will pay for copies and shipping if you can assist me. I have some minor work to do to get the HW-16 to operate properly, The VFO and TX / RX unit work find on 80 and 40 but will not TX on 15 Meters.
So in order to completely check them out and tune them according to Specs I need the manuals.

Again If you can help it would be most appreciated. My 11 year old twins will be very happy to have this rig available to them when they get there tickets in about 3 months.

TNX for the Read,

Don W6PJJ

Indeed.

The smaller broadcasters, particularly the AMs, and the listeners,
would benefit _tremendously_ from a dedicated digital broadcast
band.

But the fact that it would make all of the signals in a given market
equal by making the reception of all of them essentially perfect is
the very fact that makes the big-money boys _hate_ the idea of a
dedicated digital band.

They want to keep their dominance.

"We paid $30 million to have the biggest signals in that hick town,
and that little local schmuck with the $100,000 AM daytimer is going
to have an equal signal to us on the digital band?! And there'd be
so many channels the locals could have perfect-fidelity community
access on dozens of channels?! This has gotta be stopped -- get on
the horn to my Washington lawyer NOW!"

They want to keep their competition stuck with daytime-only or
low-power night operations that cover only 1/10 of the market. They
want the smaller AM stations to continue to live with ionospheric
skip problems, high (and ever-higher) levels of man-made noise,
overallocation, and close channel spacing which makes in-band
on-channel (IBOC) digital implementation on AM a faint shadow of
what the FMs will get -- and a joke compared to what these stations

could achieve in a dedicated digital band. (And this is to say nothing of how IBOC will adversely impact listening to weak stations and DX listening by increasing adjacent channel noise.)

Yes, it is true that some of the big-money boys own a few AM stations, but they're willing to accept the distinctly inferior IBOC system for a fraction of their properties, because it will prevent their worst nightmare from coming true: the suddenly even playing field that a dedicated digital band would provide.

Meanwhile, _real_ digital radio is being offered by satellite providers, who provide superb quality and universal coverage, though without any chance for the small entrepreneur or free-speech advocate to get a voice in channel lineup.

With all good wishes,

--

Kevin Alfred Strom.

Let me put it this way: I personally made that modification to both of
my TCS-13 xmtrs, it DOES work, and I've put many QSO's in the logbook
using it. FWIW, a short article about the mod was published on page 40
of the May, 1982, issue of HAM RADIO magazine.

I don't recall so many S-40[only]&S-38[only] at one time in the last 3
years.
Hey, would a Lafayette He-10 (KT-200/ Trio 9R-4J) qualify as a "boatanchor"?
...Maybe for a wherry... a dory... a skiff... a dinghy?
canoe, pirogue, pram, kayak, punt, puddlechuck, yawlboat, pulling boat ?

What is racist about that post? Gee...you Liberals...all somebody has to do
is use the word "black", "African" or a panoply of others that you dislike
and you call them a racist?
Gee, Rich. Wring your hands much these days?
By the way, it is Kevin who is the racist here....

Message-ID: <b3bedi$8vk$1@bob.news.rcn.net>
Source record: 34082

Very good!

I must have read your description wrong. On first reading,
I read it as you were speculating on what might be done.

On re-reading, it reads more like you are describing something
you have done... Sorry!

As I dredge up 30 year old memories, I think I remember something
like that being described somewhere.

As I said earlier, somedays, I wish I had kept my TCS, other
days I am glad they are gone.

I definitely remember a very deep RF burn I got on the knuckle of
my index finger from a spark I drew off of the antenna wing nut!
That thing took forever to heal! I guess because it was already
cauterized.

-Chuck, WA3UQV

From: "Dr. Phil" <robert931@sympatico.ca>
Message-ID: <Hoe6a.698$VG.145644@news20.bellglobal.com>
Source record: 34089

This is an audio receive filter and has functions Peak, Notch and Lowpass.
These functions are all adjustable via the frequency and selectivity knobs.
This unit greatly reduces noise on your receiver. Not DSP, it's an analog
filter.

Asking $20USD plus shipping.
Contact: valveman_6146@yahoo.com
Cheers,
Robert

Please put your ten-cent "NETCOP" tin star back in
the box of Cracker Jacks from which you removed it.
You're just another "jealous of Ebay buyers" pissant.

This has not been my experience.
Perhaps there was a problem with your receiver,
as I'm quite happy with mine. Granted- It's not a "YeaComWood,"
but I don't expect it to be a modern rig.
There's a certain romance in "driving a model T,"
but you can't expect it to drive like a modern sports car.
I've found mine to be stable, plenty sensitive and have very nice
sounding audio. It is a little broad, but WWII receivers were
designed that way on purpose. The bands have to be pretty crowded
to give me any trouble.

# 1534. Re: WTB:TCS Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-24 14:34:19 UTC
From: Chuck Harris <cfharris@erols.com>
Message-ID: <b3dam2$feg$1@bob.news.rcn.net>
Source record: 34107

Hi David,

I had several TCS receivers, back in the days before I had
any decent test equiptment. So, I never did a real test on
their sensitivity. But they all seemed to be about identical
in performance. The biggest problem, was that the sensitivity
seemed to die in the upper frequencies. I found that by making
a socket adapter for a 717, and replacing the rf amp, and mixer,
the receiver gained some pep in the 9Mhz to 12Mhz range.

The audio was just fine, for a single ended 12A6 (12V6 a like)
I liked the way that tubes used in stressful positions were often
also used in loafing positions. This allowed for tube swapping
fixes in the field. (eg. 12A6 as AA, LO, MO, and Modulator, IIRC)

It certainly was a nicely built machine. Simple, and strong as
a tank. If one were to follow me home, I wouldn't turn it away.

# 1535. FS Complete RE Collins S-Line

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-24 14:43:52 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <lcq6a.3342$vU3.370568@newsread1.prod.itd.earthlink.net>
Source record: 34108

I have for sale a nice complete Collins Round Emblem S-Line. It consists of
the following:
1. Collins Round Emblem 75S3C Receiver loaded with filters;
2. Collins Round Emblem 32S3 Transmitter;
3. Collins Round Emblem 516F2 Power Supply with Cabinet;
4. Collins Round Emblem 312B4 Speaker Console, Phone Patch, Power Meter;
5. Collins Round Emblem 30L-1 Amplifier with 4 new Jan/RCA 811A tubes;
5. Collins SM-3 Mic;
6. All Original Collins Connecting Cables with labels for the above station;
7. Original Manuals for the 75S3C, 32S3, 312B4, 30L-1. Copy for 516F2.
All equipment is in working order. It could probably use a little alignment.
It has been stored for several years.
It is in very nice shape cosmetically. Overall CCA Very Good to near
Excellent. Digital Pictures Upon Request
for serious potential buyers. Also, e-mail me for additional questions.
Price for the entire S-Line Station is $4500 plus shipping from 79602
Thanks, Charlie Hugg, K5MBX, CCA 307

Another TCS mod replaced that wing nut with an SO-239 connector, and yet
another converted the link-coupled output into a pi-network. Both were
"no holes" modifications and were/are well worth doing!

Something I haven't (yet) tried converts the TCS to DSB modulation, nor
have I gotten around to installing the factory-mod better noise blanker.

Larry, you have to allow for the occasional "computer appliance operator" who does not know how to use his/her software and set features such as filters for "auction, ebay, more days, bid, ends soon" These are the same lamers who would croak if they ever had to open a cabinet and actually work on a circuit.

Steve

# 1541. Re: "CW" Typewriter on ebay

But dudes, why not be just a little bit considerate? Try it just once and you may find it isn't that difficult.

There IS a difference between "For Sale" and For Auction." If you understand the difference (that may be where the problem is) then why not use it?

Your attitudes appear to be really bad. Please send me the email address of your moms and dads so I can loet them know what little pissheads they have raised.

Have a nice day

Don

Source record: 34114

No need to modify these for 6146s. There are still plenty of 6JS6s out. As far as the radio goes, stay away from the original FT-101 but the 101B and 101E,EX,EE series were fine radios and are a real workhorse. You won't have the bells and whistles of the newer rigs but for the price they're a good buy.

Lots of these were modified and used on the CB band, so make certain it works well on all bands.

>jilted you for an African-American, have you?

Gee tough words from someone in radio that just learned how to use a computer after the Telecom Act of 1996 was signed into
law.

Everyone send your opinions to Commission Michael Cobbs of the FCC for force Clear Channel to sell their property, have them
sued for being a part of the Warwick RI club disaster (WHJY was part of it and lost one of their own) and to put Jeff
Dedarian in jail with the sodomites because he knew. He even had a camera on the stage..."Gee what's that?". Let's end
Clear Channel!

Gosh Dbowey, I never see you get anal when someone fails to put FS: on an item that is for sale.....

Courtesy is using a proper subject line that describes the message. When the subject line says EBay, then that has been accomplished. He could have used "auction", "on ebay", or anything else he chooses to accurately describe the message.

One always has the option not to read a message. If your subject line just says "For Sale" and does not describe what you are selling, well, I for one will never read your message. I just move on. What I do NOT do is flame the guy for not posting to my narrow stupid standards.

Steve

Oh, no you're not a nit-picker!

Brian Carling, who goes by MANY aliases to try to disguise his
operation is just a typical internet scheister out to make a buck.
Da Valve, Sidevalve, Sabbatai Zvi, Brian Carling, and Lord
knows how many other phony names he uses, is a LONG TIME
'ham fest raker' who buys up the dregs, plugs them in and if they
don't immediately smoke, declares them 'MINT CONDITION.
He'll run pitiful 'WTB' ads to find a 'rig I've wanted for years' and
hope for a sucker to sell him one at a bargain, then mark it up
double and sell it with a glowing description of how he just doesn't
have room for it anymore.

Beware this person. Bad deals to be had. I know - I've been there!

FOR SALE:

Pair of nice old Morrow converters.
Model 5BR and 5BR-1 are both similar.
These cover 80 through 10m, and have slide-rule dials.
Convert signals to the AM broadcast band. They have a noise limiter
built-in, which is neat. Great gear for mobile operation. They require
12V and 250V for power.

Manual copy is included.

One is in excellent shape. The other needs restoration or could be
used as a spare. Pictures available on-line at:
http://www.gizba.com/x/sidevalve/radios.htm

I would like $35.00 for the best one and only $12.00 for the other.
Will sell both together for $45.00 plus shipping

Barry,
My wife went to the house on her lunch break and checked it
out. It IS a 1966, 43rd Edition, Handbook. Like I said it's in pretty ruff
shape with many of the pages loose. As far as I can tell though there are no
pages missing. If you really want it find out what it would cost for
shipping, round it off and send me a money order. I think I can send it UPS
or US Postal. If you want to wait then I can try to determine what it would
cost and send you an E-mail to that effect. You can then send me the exact
amount and I will send the book.

# 1575. Need Help on an HQ-129X

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-26 21:15:59 UTC
From: greg423 <greg423.news.invalid@web2news.net>
Message-ID: <16851N159@web2news.com>
Source record: 33998

Hi:
I have a Hammarlund HQ-129X that has developed some problems. Its sensitivity has gotten bad on upper frequencies. When you turn the sensitivity control past 8, it becomes microphonic. The OC3 tube started to glow purple, so I replaced it, but the new tube also glows purple. I don't know too much about electronics, but I can identify components and solder in new ones. Can anyone help with diagosing the problem? The radio has previously behaved well for the last two years since I have owned it.

Thanks,
Greg

Hi Greg:

The OC3 tube is the voltage regulator and the condition you describe may likely be normal. As far as the microphonic condition when increasing the sensitivity (r.f. gain) control and loss of sensitivity on higher frequencies, a good place to start is by changing tubes with known good replacements or using a reliable tube tester. Aside from that, a standard diagnostic proceedure, checking voltages and component values may be in order. My 1946 HQ-129X experienced similar problems and I "lucked out" with a tube change. Drop a line if I can be of any help.

It's normal for a voltage regulator to glow, if your old one didn't glow
it's probably bad. Check the RF and IF tubes.

I had to 100% re-cap mine. It, and my HQ-120, had virtually all the caps leaking and and changed value. After the cap changeout, they both worked like gangbusters... still do! Check the tubes, too, as others have suggested.

## 1581. Any Philco experts here?

This comes up every now and again, and it just appeared on the Hallicrafters List.

How to tell the differences.

Inquiring minds want to know!!

The SX111 has 13 tubes, and the SX111 MK 1 has 14 tubes.

Look at the back center of the chassis top. The SX-111 has C69 there, and the SX111 MK1 has the 6BY6 Productor Detector Tube in about the same place.

I scanned in the tube location figure from both manuals, combined them with a few arrows etc. They're at

www.qsl.net/k3zx/sx111_vs_sx111mk1.JPG

The 80 tube will get pretty hot. Do you see any orange or red
coloring of the plates? If not, then it is probably OK. Can you
hold your hand on the transfromer after about 20 minutes or so?
Have you changed the filter caps yet? Check the bias voltage on
the 42 output tubes, if it is too positive the tubes will draw too
much current. Is the B+ voltage up to spec?

# 1594. Radio in the Classroom

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-27 15:23:58 UTC
From: Gleason Sackmann <gleason@edu-cyberpg.com>
Message-ID: <Xns932F5FB503032gleasoneducyberpgcom@216.168.3.44>
Source record: 34016

Hi!

Just a quick note to let you know that the RIC [ Radio in the classroom ]
list is again active.

You can view the previous postings to the list at:
http://www.classroom.com/community/email/archives.jhtml?A0=ric&D=1&F=P&H=1
&O=D&S=&T=0

The new archieves for RIC are found at:
http://www.freelists.org/archives/ric/

- You can subscribe to the list by sending email to
ric-request@freelists.org with 'subscribe' in the Subject field

- You can unsubscribe from the list by sending email to
ric-request@freelists.org with 'unsubscribe' in the Subject field

- To post to the mailing list, simply send email to
ric@freelists.org.

Since there are not that many postings, we do not have the digest option
enabled, but that can be changed if needed.

Just a reminder as to what the RIC list is for:

The RIC list will be used create a sharing community for educators who are
exploring the use of radios for instruction and curriculum integration. We
will encourage teachers to create and share lesson plans and learning
activities, and to experiment with all kinds of wireless communication
equipment.

Thanks.

<Gleason>

It's a back of the volume control switch. I don't think there's anything unusual about it. Try Mark Oppat, who posts frequently to the rec.radio.antiques.radio+phono newsgroup.

> He also wants a original type power cord for this. Is this simply a cloth

Brown rubber would be correct. Vinyl would be more durable. I've never tried this, but I've heard the vinyl can be made to look more rubber like by drawing it through some fine steel wool. Shiny vinyl is OK for me.

Last shot before it goes to eBay or gets stripped for parts:
Drake TR3 HF Transceiver.
Very good condition. Front panel immaculate.
Transmits fine. Receive is weak, needs r.f. amp or i.f. amp tube
replaced.

No power supply but you can easily find or build one.
No rust. Everything complete and looks great.

Comes with the original manual.

(Rig looks cleaner than the pictures)
Picture at:
http://www.gizba.com/x/sidevalve/radios.htm
rear pictures etc. on request.

Last chance bargain for someone at $109.00 plus shipping
A lot of radio for the money.

# 1598. Help: S-20R speaker, tropicalized ??

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-27 19:52:06 UTC
From: John <mjohn@twmi.rr.com>

Source record: 34021

Tropicalized probably means that they sprayed the whole thing
with MFP (Moisture Fungus Proofant) to keep the little moldy
mildewy thingies from eating it up.

An equivalent transformer is likely available from Hammond
in Canada. Try Google.

-Chuck, WA3UQV

# 1602. AEA KT-1 Keyer/Trainer Info Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-27 23:56:35 UTC
From: caljsi@aol.com
Message-ID: <20030227185635.11862.00000363@mb-fk.aol.com>
Source record: 34025

Hi all,
I have one of the subject keyers but I need a set of instructions on how
to vary the speed, sidetone frequency, etc. Also I can't tell off-hand whether
the keyer is set up for keying a positive or negative voltage.
If someone has a manual of which I could get a copy, or could tell me what
I need to know about setting the little beast up, I would really appreciate the
help. Please respond to cal.jsi@verizon.net.

# 1603. FA: Shiny TTY-32 (TELEX model)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-27 23:59:52 UTC
From: "George R. Gonzalez" <grg2@attbi.com>
Message-ID: <YDx7a.285046$HN5.1192953@rwcrnsc51.ops.asp.att.net>
Source record: 34026

Many profuse thanks to everybody that rounded up information for me about TELEX ttys. z

I'm in a bit of an embarrasing situation-- after getting this nice Model 32 WU tty, testing it out, finding out it works perfectly, I finally realize -- I don't have any space for it!
My SWL area is very small, already full, plus no easy way to get the TTY down the steep narrow stairs to my lair.

So I've reluctantly put it up for auction on eBay. Interested folks can see it at:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3010656618

You could do a lot worse than to have a shiny , sleek, and well-working Model 32 TTY.

Thanks for reading,

George

It was treated with anti-fungal spray.

In reality, any general purpose audio output transformer will work.
Try Antique Electronic Supply. In a pinch, a small filament transformer
will make a good temporary substitute.

Pete

Message-ID: <3E5F5452.3000103@verizon.net>
Source record: 34034

Hi Charlie...I was just skimming through the radio news groups, when I spotted your Swan Gear.....I'm curious..do you know if the equipment is working??? I wonder if you happen to have some scanned photos of the gear?? I have to be honest Charlie, I was never a big fan of the Swan ssb gear...They always seemed to have problems with drift and poor Audio Quality...But Since I've sold all my HF Gear years ago....It sounds like it might be a fairly reasonable price for an HF Station just to get back on HF for a bit and see whats happening these days....However, I'm not looking to restore the radio back to new..or like new condition...Just looking for a decent HF operating Radio to play around a bit again..Charlie......

If you get a chance drop me some mail with some more particulars on the gear....

Thanks

Carl

Source record: 34035
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.boatanchors

FOR SALE:

Swan 350 transceiver with 117XC power supply/speaker cabinet.
All in good operating condition with manual.

Power input 400 watts PEP on single sideband, and 320 watts input on CW. Also will run AM, Single Sideband with Carrier, 125 watts dc input on all bands.

Has AGC, ALC, and grid block CW keying. Unwanted sideband down at least 40 db.
Carrier suppression at least 50 db. Sensitivity: Less than 0.5 uV for signal-plus-noise ratio of 10 db.

Controls for Rec-Tune-CW, AF Gain, RF Gain, Mic. Gain, Bandswitch, Carrier Balance, PA Plate Tune, PA Grid Tune, PA Load Coarse, PA Load Fine, VOX-PTT Switch.

Rear controls for Bias, Grid-Block CW Key Jack, Jones plug power connector, Vox connector, S-Meter Zero.
Uses a pair of 6HF5 finals.
When the 350 was introduced in 1965, the price was $420.00, the 117XC was $95.00

Swan 350 available for $195.00
Swan 117XC available for $85.00
Will sell the Swan 350 and 117XC for $250.00

E-mail me for pictures or see:
http://www.gizba.com/x/sidevalve/radios.htm

Reply via e-mail to arrange purchase.

Message-ID: <484938a.0302280711.b115444@posting.google.com>
Source record: 34037

Hi everyone,

New to the group and a new Hammarlund 129x owner. I hooked
a simple wire antenna up to the set, powered it up and looked
for the strongest radio frequency in my area. Found it with little
trouble but I've found that there is quite a bit of background
noise/hiss.

I also noticed that I'm not picking up other signals that are known
strong.

In short, I believe the radio may need some adjustments/replacements.
Can anyone
give me some suggestions as to what may be interfering with the signal
strength and audible hiss?

Thanks in advance,
SH
Gaow

Greetings:

HERE IS THE PROBLEM -- In the past, I have tried to help some with technical questions relating to ham gear. Too often, I have taken the time research the question and write a response, some rather involved, and send my response back, only to have it rejected because of a non-working email address.

HERE IS THE SOLUTION -- If you would like a response from someone who wants to help, PLEASE make sure that your return EMAIL ADDRESS works and is not one that will fail because it is has some error, is incomplete, is obsolete or has some other problem. Additionally, please DO NOT put "NO SPAM" or any other killer-filler inside your email address!

HERE IS THE PAYOFF -- You will get more help with your question(s).

Cheers...

Al

Replying via email is something I try to avoid. If you send the reply
to the group the added advantage is that in case someone else has the
same or similar question he/she will be able to do a search on
groups.google.com and find hilp without asking the same question
again. Time saved for the poster, time save for people answering the
same question over and over and serverspace saved (except on google
:-)) )

Bye Maurice

>

For what it's worth, I've had exactly the same experience tuning up the IF cans in an SX-15. I believe there is some aging effect involved, either oxidation of the capacitor plates, or some other change in the capacitor dielectric material or coil materials with time that has caused this. A little while ago, I worked on an old audio amp that had wax paper capacitors in equlaization networks. I checked the capacitance values, and found that all were almost double their marked value. I concluded that the more volatile components of the wax had evaporated, causing the dielectric to shrink and making the capacitance go up.

# 1621. FS Nice Collins Gold Dust Twins

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-02-28 17:21:59 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <XUM7a.6285$Wl3.629105@newsread1.prod.itd.earthlink.net>
Source record: 33944

I have a very nice set of Collins Gold Dust Twins for sale. The station consists of a 75A4 with 4:1 Reduction Unit and Spinner Knob, 3.1 SSB Filter, and Original Manual. Serial Number is 23XX. It works fine and is in exceptional cosmetic condition. The Collins 270G-2 Speaker is included. It looks and sounds great and even comes with the original Green Inspection Tag. Also included is the matching KWS-1 Transmitter. It also is in nice condition cosmetically, and it too comes with the 4:1 Reduction Unit and Spinner Knob, the Original Manual, and all of the Original Cables and Plugs, and the Original Collins Antenna Relay and the Blower Hose. It is complete and is suppose to be in fine working condition, although I have never put in on the air. I have had it about 5 years. It came from a Doctor's Estate. Serial Number is 5XX, but it has been upgraded with all of the later factor mods: 4X250Bs, Test Key Switch in place of the ALC Control, 6X4 replaced by 6AL5, etc.It also has 3B28s in the PS and even has the key to the PS door. Price for the entire station is $3475 picked up in Abilene,Texas. The transmitter and PS weight is 223 pounds, bring a strong back.
Digital Pictures are available upon request. Thanks, Charlie Hugg, K5MBX, CCA 307

I'm afraid you're missing the point of a news group, Al.

The idea is to promulgate information to people who need it. Many
people read the postings, both questions and answers, and benefit from
the information without ever participating in a particular thread.

By replying using email, you deprive these individuals of the benefit
of your expertise. You also shield your comments from peer review.
Perhaps that's your intent.

Hi..
I have a Kenwood 830S.
The power drops off from 75 meters (90 watts) to 10 meters (45 watts.)
The finals have been nuetralized.
Any suggestions to what to look for would be appreciated..Thanks..Jos

# 1628. Canadian Marconi radio info

Newsgroup: rec.radio.amateur.boatanchors

Source record: 33951

I realize that this is not the exact group for this query but when you reach a stone wall one tries all means to get over. I am about to start renovation on a 1940's Canadian Marconi bakelite cabinet model 218 B.C. band receiver. While I can get by without a schematic, I always like to have one. I have tried for the past 2 days to get into Nostalgia Air but their site seems to be acting up. But then again they might not keep data on Canadian radios. If someone has info on a site with FREE data from SAMS or in particular RCC, I sure would appreciate hearing from you. Many thanks in advance, Keith, VE3JKC.

There are *many* benefits to posting answers to the newsgroup.

First, it is archived. It might well be a mundane question that
is only asked once a year... but if you have a really good
answer, it will be available for those researching that or
similar questions through the google archives.

Second, your answer may trigger someone else's memory, and
they might be able to provide even more information.

Third, what if you are simply wrong. As in this case... :-)

In all of the above, others will post, and many will benefit.
That's what it's all about.

According to my index, Marconi 218 schematic is located in 1946-47 Radio
College of Canada data sheet #127. Try the Public Library ?? ve7afn..

After further inspection, I've found that some changes were made to
the radio.
Pencil notes on the inside of the radio indicate that the changes made
were
fashioned after an article in the May 1959 issue of CQ. Two of the
6SS7 tubes
were replaced by different tubes: one a Sylvania 6SG7 and a 6AC7-w.

The 6SG7 replaces the 6SS7 located directly below the OC3 tube in the
back/left
of the radio(front facing you). The 6AC7-w is located just to the left
of the 6SG7

The 6H6 was also removed and replaced by a box that contains a 12AX7
and another smaller tube that I can't currently make out.

I appreciate that the prevoius owner(s) noted these changes but man,
this does
make things a bit more difficult to know how to troubleshoot. It was
also noted
that the capicitors were changed out in '91, to what, I don't know
yet.

I will take the advice to change out all the tubes. I do not yet own a tube tester (I'm working on it :)) so I'll just hold on the old ones until I can test
them. I'll keep you posted on my progress.

Also, does anyone have a copy of the 1959 May issue of CQ? If so, could you copy the article(s) concerning this change?

Thanks for the quick responses and any info on the CQ article.

Hi..ok..this is whats happening so far..
Sprayed some deox, on the bandswitch and adjustable caps in the RF section..
I adjusted per manual ..L-28, L-29 and T-4 for maximum ALC deflection..
Also adjusted L-5,L-6,L-7,, L-11 and L-12 on the IF unit for max S-meter..
reneutralized finals...
I have 100 watts 160-40 meters, 90 watts 20 meters, 85 watts 10 meters..
Any more suggestions or comments appreciated..

Do you have proper grid current when you tune up?go by the owners manual for tuning,if you have proper grid current and low output you could expect to find a problem in the output cage(6146 output circuit)..if not check bias voltage,idling current,look for loose or broken wires, band switch etc..good luck W4PQW Harold

Actually, the discussion is not about newsgroup postings, Stephen. It is about people responding to newsgroup postings by email. And, given that, I have to agree with the others here - newsgroup discussions should be kept in the newsgroups. An email response is too personal, when a personal response was neither expected or invited.

If the question can be answered in a short form it should be to the group. I have seen a request for a schematic and most news groups will not let you send them via the group. I have sent small ones Z( say ones that are less than a meg or so big) directly to the people. If it gets bounced because of a faulty address then I do not try to send them again usually. I just don;t feel like taking the time to take the extra 2 seconds to look at the heading to see what I need to do to send it direct.

If you are stating output into a 50 ohm load, leave it alone.
That is reasonable for the TS-830.

If you are stating input power to the finals, there is still something
causing a problem. You should be able to get around 220 mA
at 830 V on the plate circuit of the 6146 tubes.

The efficiency will show an obvious decrease in output on 10 and
even 15 meters.

# 1641. FA: Complete and functional Victoreen Radiation Detection Set

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-01 14:53:23 UTC
From: Mark@The.Toob
Message-ID: <h8i16vo951q84u66lq9bieahpsmqvb3dmt@4ax.com>
Source record: 33964

A complete Victoreen Radiation Detection Set in the Civil Defense
carton. The set includes the two-high range units, the low-range
unit, headphone, dosimeter charger, 6 pen dosimeters, carry straps,
and operating manuals. The low range unit (M700) is
useful for checking for radium paint on older military radio gear
meters and panels, and also for geology buffs. The high range-units
are true war meters suitable for use after a nuclear attack or
Chernobyl scenario.

All units are operational, and guaranteed to function. The three
detectors calibrate/zero correctly, and the dosimeter charger
correctly charges the pen dosimeters.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3210312294
This auction ends Sunday 2 Mar at 1400 PST

Thanks,

Mark

Keep in mind that those bandswitch contacts are famous for
trouble. Using a magnafier, look carefully at each contact.
First, verify that there's no hole worn through the spring
itself. If there is, you'll need a new wafer ( a pain to
change, but it's workable). Then, watch each spring as you
change bands. They should have "follow", indicated by movement
as the rotor passes through it. Kenwoods seem to end up with
weak springs....hence, little or no follow. They can be
retentioned......very carefully. Just a little is more
than enough, not so much that the rotor is blocked as it
enters the contacts as that will destroy the contact.

I've fixed several KW's that way as the "matman in a can"
spray is only good until the next time there is a little
deposit of crud from arcing or smoke and it burns......
just a bit.

How did you check the capacitors? I use a Heathkit bridge, and most old
paper caps seem more or less on spec, that is, if they aren't so leaky that
the eye won't open. Do more modern testers use a RC type timing circuit?

# 1644. FS: Rare Globe Electronics VHF-62 Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-01 16:42:08 UTC
From: da Valve <sabbatai_zvi@hotmail.com>
Message-ID: <ejo16vsgloqjgikfdvf5rq4siel5q1ihs1@4ax.com>
Source record: 33967
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.boatanchors

FOR SALE:

Globe Electronics Hi-Bander model VHF-62 Transmitter.
RARELY seen. This rig runs 60 watts AM and CW on both
6 meters and 2 meters.
Equipment is in fairly good shape.
The inside looks VERY good.
Tubes: 6146 P.A. final and modulator type 6L6GB.
Has a built-in 120V AC power supply, modulator etc.
Provision is made for VFO input or crystal control.
Pilot lamps for power & plate.

Front panel controls are: AC off-Mic Gain,
Function switch for: AM/STBY/TUNE/STBY/CW,
Osc. Tune, Buffer Tune, Band selector 2m/6m,
Final Grid Tune, Antenna load, Final plate tune,
Meter switch for Osc./Buffer/PA Grid/PA Plate.

On the rear panel there are two fuses, Mic input,
Accessory plug, and SO-239 connectors
for 2m and 6m antennas.

This is a really cool piece of equipment and
they only sold a small number of them.

Must be one of a handful still in existence.
Will sell for $159.00 plus shipping

I think what people miss sometimes is that very few people come to
the newsgroups to be helpful. They come because there is something
of interest going on in them. Reading people's questions in
themselves isn't all that interesting. If the answers didn't land
in the newsgroup, there'd be very little to read, which would result
in the people who can answer the questions to stop reading the newsgroup,

I come to read what other people are saying, and adding when appropriate.
Because of that, I'm here and ready to answer a question if I can.

"I" prefer direct replies, as there are times when the newsgroups are down with my ISP, and I can only get E-Mail. Therefore, if I've posted a query, I don't want to have to wait for the newsgroups to come back to life. When I reply to people asking questions, sometimes, if it seems a personal sort of dilemma, I may try to answer them directly. I hate it when I get bounced. Needless to say, I don't answer many... For an example, if someone is looking for an item, I may reply that I have one, condition, price and terms. I feel they are looking for it, therefore, that e-mail is meant directly for them. Why bother the rest of the group with a useless (to them)posting? Besides, the terms I'm offering them isn't everyone else's business.
Just my 2 cents or preference on this issue. Although I will say, I can understand the other side of the coin.
But, as they say, to each his/her own.

This is very funny, since WOR now has an absolute policy against
smoking. If you're caught smoking anywhere in the building you're
automatically, instantly fired with cause. No appeal.

It was instituted about 6 years ago. The building, itself, became
non-smoking and, soon, the city will add another level that will
forbid smoking in public buildings. I wouldn't be surprised if the
metal detectors in buildings are nodified to detect tobacco, too.

ABC also had a no smoking policy when I was there before WOR. I
remember sitting in my office smelling smoke. Only one person would
violate that rule. He's dead now, doing posthumous PSAs against
smoking. When I smelled smoke I always know Morton Downey, Jr. was in
the building. He smoked like a power plant.

I've seen pictures of that 1935 "streamlined" transmitter. They'd
probably refer to the new DX-50 as "miniaturized" by those standards.
I doubt the 1935 transmitter would even fit in the current building.

In article <3E5EF123.CAF15F34@gte.net>, Alfred Carlson <wa7uhr@gte.net> writes:

>Anybody have the pin out for the accessory receptacle on the rear apron
>of the receiver. Especially the pins to jumper for standby/operate.

from the 1959 Heath catalog (which includes schematics!):

Pin 1 is Ground
Pin 3 is B+ (about 250 volts?)
Pin 8 is 12.6 VAC for heaters

A QF-1 could plug directly into the accessory socket

There is no external standby connection in a "stock" AR-3. The mode switch (CW-Standby-Phone) silences the receiver in "Standby" by opening the ground connection to the center tap of the HV winding of the power transformer. A better way to mute is to open the ground connection of the RF gain control.

The headphone jack opens the speaker circuit - it's actually set up for low-Z phones!

Never hand an AR-3, but I did have the earlier AR-2. In some ways AR-2 was better (separate BFO) but in other ways it was worse (no accessory socket, no antenna trimmer).

I'd not say an e-mail response is excessively personal.
Different people interpert this differently.

I have a distinct dislike for fake return addresses as there are times
I do want to reply directly to the poster when I think it appropriate.

The biggest problem is that those using the fake addresses to try and
avoid their address being harvested, keep forgetting to change it to a
valid one when they send e-mail.

I would much rather have answers to my posts CCd to me as that way
they end up being posted and I still see them. I mark threads, but it
seems that more and more postings do not link to the thread. I also
follow a lot of news groups. There are many times I never see my own

post show up, but see answers...Nor can I find the original by using
<show all posts>

The end result being I probably miss 15 to 25% of answers to my posts,
or posts in the threads in which I'm interested.

I do not treat a CCd, or answer to a post as private,

Hi, inherited a box of electronic stuff and have an attenuator that has a 10 position rotary switch and knob.Switch has 3 teirs and all the contacts are gold with high precision resistors soldered between the teir contacts. The unit is completely enclosed using brass screws for of heavy gauge aluminum casr. On the top of the case are two connectors (look like small BNC type) marked J! and J2. The case is all grey and the only markings on it are "13A ATTENUATOR". Case measures 2 3/8" x 3" x 2 1/2" tall exccluding the switch and the connectoer terminals. Trying to find out who made it and what it was used for??
Thanks, Don WA1TVH email dpelrine@c4.net or answer in news.

WECo made it. It's 600 Ohms in and out. It was a general purpose precision attenuator. We used one in the Telco Program audio testboard and wherever else that we needed "odd" send levels.

Actually, I prefer just the opposite. I hate unsolicited or unexpected large files via email. I often check my email quickly when I'm rushing around, and a large download is a irritating delay. Because of that, I set my mail program to automatically reject all large files except those from the people in my address book. Large files can still be sent, but only if I know about it a day or two in advance (so I have time to add the sender's address prior to the file arriving).

Instead, I would rather receive the large file at my convenience - posted to a binaries newsgroup or a web site. For example, I keep a web page on my site just for others to download a large file. When I want a person to have a certain file, I send them a link to that page. After that, they can visit the page and download the file whenever they want. Works great.

And you can get that direct reply by simply requesting an email response in your postings. Regardless, that doesn't change the fundamental nature of newsgroups - newsgroup discussions are for the newsgroups, not email.

Have a Kenwood BS-8 panadaptor module for the Kenwood SM-220 station monitor.
Shipped to your door for $100.

Thanks for reading the posting.

73s,

Evan

# 1669. FS: Johnson KW Matchbox antenna tuner with SWR Coupler

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-02 14:32:37 UTC
From: k9sqg@aol.com
Message-ID: <20030302093237.01794.00000211@mb-fa.aol.com>
Source record: 33992

Have a Johnson KW Matchbox for sale with the SWR meter and the directional coupler. Have a copy of the manual. This tuner is rated at 1 KW AM and legal limit of 1,500 watts PEP is no problem. This tuner is about three times larger than many current "legal limit" tuners. It is preferred by many for feeding open wire and coax fed antennas because it is link coupled and thus has no balun to saturate, arc, or consume power by heating. Have a copy of the manual. $325 plus UPS shipping, CONUS only please.

Thanks for reading the posting.

73s,

Evan

## 1670. Trade my Johnson Pacemaker for your ???

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-02 14:33:08 UTC
From: W8KZW <w8kzw@arrl.net>
Message-ID: <b3t4p3$ej2$1@news.chatlink.com>
Source record: 33993
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have a Johnson Pacemaker that I'd like to trade.

The front panel is very nice, though there is a vertical "crease" on one side that you can see if you look for it. The enclosure is scratched and needs to be repainted.

There are some tubes missing, and I've not plugged it in. The manual is a copy downloaded from the web.

I'm looking for other hf gear - project radios ok, as I'd rather work on something I plan to keep than to just fix something up to sell ... I really have no interest in ever using this transmitter.

The rig is in West Bloomfield, Michigan, and I'd prefer a local deal.

I can email photos if you've got something I'm interested in.

w8kzw@arrl.net

While a reply directly to a person may be appropriate posting a proper
email address to a newsgroup is bad news. After posting to newsgroups about
2 years ago I am still getting several messages every day about how to keep
from being obese and how to make my male member longer. It appears that the
only way to get rid of this spam once you have posted to a newsgroup is to
get a new email address!

If you have normal ALC action on 160-10 then you have flat finals, Low
line or DC voltage, or 6146 or 6146A rather than 6146B tubes. But if
85 watts on 10 meters is steady, I wouldn't worry about it. You will
still be better off than with a solid state rig with internal tuner.

If ALC is Falling off, change the 12BY7 with a GE or RCA tube.
This is the only one I have had to replace. Be careful of the shield
and shield wire when replacing to make sure the shield wire doesn't
pull out of the board.

Hello John

> Can a Drake R-4B receive the US AM broadcast band (550-1700kHz) with the
> correct crystals installed?

No, the input filters does not cower the band lower that 1500 Khz, so if you
want to recieve the AM band you have to rebuild the input filter.

Regards Max

I have the following tubes for sale:
1 7360(used) $20.00
1 931A(used) $20.00
1 7868(used) $20.00
1 8233/E56L NIB $30.00
2 1P40 NIB $13.00 each
1 6267/EF86 New $25.00
2 7687 SYL New $20.00 each
1 7788 New Syl $25.00
2 7199 New $ 20.00 each
1 UX-112A(used) $30.00
1 6CA7/EL34 New $45.00
1 6A3(ST) New $30.00
1 6CD7/EM34 $50.00
1 6B5 New $20.00
1 918 New $15.00
All used tubes have been tested and are in a great working condition....you can also buy them all for $275.00 plus shipping instead of $395.00(which is the total of all the prices above)..feel free to contact me for any info...thanks erpi@revelstoke.net

# 1692. VINTAGE NEW WESTERN ELECTRIC G-234879-1,GA-10192-L1,9009252 RELAY

I know a saxophone player who smoked. He's a incredible player who
blows a lot of jazz. He's not out of breath at the end of a long
tune, either.

There's always an exception to the rule. The normal distribution curve produces some people out on the skirts who don't follow the norm. Luck of the draw one would suppose.

If you're trying to convince people (yourself?) that smoking is GOOD FOR YOU you are sadly mistaken.

Wes,
It is the largest hamfest in the Pacific Northwest. The two in Salem,
OR are close but this is the grand daddy.
If you are on the second floor, a pallet jack is available to use to
get stuff off an on the elevator. You can drive your car into the
grounds the night before to unload but a utility handtruck is the tool
of choice, IMHO.
Good luck!

# 1703. New Homebrew Website Up and Running

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-03 18:24:19 UTC
From: Pete KE9OA <n.gianakopoulos@worldnet.att.net>
Message-ID: <n5N8a.8923$Uy4.769624@bgtnsc05-news.ops.worldnet.att.net>
Source record: 33926

Hi Folks,
I've got my website up and running. Some of you are
familiar with me, as a receiver designer, and have asked me to do this for a
long time. I've got all of the design information, including full size PDF
board layouts, schematics, DDS code, theory of operation, and parts
placement diagrams embedded in a downloadable zip file
The nice thing about the PDFs is that you can print
them out either on Inkjet or Laserjet transparencies, giving you a good tool
to use with photosensitized boards. I've also put up a few other things,
such as a high output RF noise source, a white noise source for audio use, a
general purpose SSB detector for use with boatanchor receivers, and a LW/MW
bandswitched active loopstick antenna. The url is:
http://home.att.net/~n.gianakopoulos/wsb/html/view.cgi-home.html-.html
You do need Acrobat Reader, Version 5.0, in order to view and print out the
PDF files. This is available as a free download
from the Adobe site.

Thanks for reading this post!

Pete

>
>

I hear this argument regularly, yet I've been posting with this
address since 1996. I frequent close to 30 newsgroups although not on
a regular basis. My e-mail address is posted at the top of my home
page as is my telephone (which only gets an answering machine)

Yes, I get some spam, but nothing compared to what I hear a lot of
people complaining about.
I set my filters and in the last two months have trapped 199 messages
and I've probably deleted about the same as of 2:07 local time today.
two months = 60 days = 400 messages = less than 7 per day "on average"

as they come in spurts. I get that much junk snail mail.

Having tracked the timing and addresses(yes I do have other addresses) I find that the vast majority of "my spam" does not come from addresses harvested from newsgroups. Instead it comes from where I go when surfing, and primarily from answering the "surveys" from national news organizations.

On occasion I find that visiting sites listed in newsgroups results in them trying to place code on my machine(s), or they know who has been there.

I can refer to some files on my ISPs servers and tell you who has visited each of my pages and how many times over a specified period. (part of being a dot com). Their default return addresses AND the IP. I rarely look at the files as I'm not interested in who visits and although I have a dot com, I'm not really commercial. So, it's not just the newsgroups that give up addresses.

The older browsers are particularly bad as they gave out a *lot* of information. (Pretty much everything that was in their configuration), but a lot still depends on your configuration, internet connection, your ISPs server configurations, "default reply to address", and whether your computer is online all the time, or if it has a dynamic address.

New ones are not bad, but go visit one of the security testing sites to find out how much information you give out when surfing, or how vulnerable your system is to outside sources.

Each of my machines sits behind its own firewall and they all sit behind more isolation AND a dynamic IP. Yet I've set here and watched someone probe every port on the machine and then start over when they didn't get through the first time. I've now forgotten how many hundreds of probes there were in that series, but it was a bunch.

As an added note, contrary to what many users think, people you know are the most likely sources for viruses sent as attachments.

Practice safe computing.

> HERE IS THE PAYOFF -- You will get more help with your question(s).

And if you are naive enough to put your real email address in you post
to a world-wide read newsgroup you get another payoff, too.

Years ago when I was new to newsgroups, which, unlike email lists, are
publicly posted all over the world, I used to post with my real
address. The payoff? That address now receives approximately 40 to 50
spam messages on average per day!!!! It is no longer usable, except of course
as a SPAM TRAP.

If you wish to reply privately to a publicly posted message, just
remove the NOSPAM stuff. It really is that simple.

One of the nice things about newsgroups is that answers are posted for
all to see. As many have pointed out, most readers browse the groups but
rarely post. And although there are technically no "rules", there is
tradition, and tradition within newsgroups is that you follow up to the
group, not the individual, unlike email lists, where you typically
follow up to both the list and the poster.

Kinda like English Common Law ;-) It may not be a "rule" but breaking
"tradition" often has unpleasant consequences.

# 1712. Heathkit HW-101..Microphone suggestions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-03 23:11:03 UTC
From: Jos <josuha@yahoo.com>
Message-ID: <v67p0d4a9kv71e@corp.supernews.com>
Source record: 33935

Hi..
I just acquired a Heathkit HW-101 station..(I know..I could'nt help it, I had a "Heathkit" attack.: ).)
I am looking for suggestions for a microphone. I have some D-104's (amplified and unamplified..). Any suggestions welcome.
Also, anybody having experience with these rigs, like to hear your comments on mods, fixes etc.
73...Jos

# 1713. Re: Heathkit HW-101..Microphone suggestions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-03 23:47:12 UTC
From: Chuck Harris <cfharris@erols.com>
Message-ID: <b40pnd$mau$1@bob.news.rcn.net>
Source record: 33936

The HW101 can use crystal, ceramic, and dynamic microphones. IIRC,
there is a resistor that gets changed to switch between the hiZ and
low Z mics.

D104s work just fine. But not the amplified types, the CB'rs
fell for the old fashioned look of the D104, and that was when
the amplified mics became popular, and when D104's started showing
up in gold, etc...

Heath designed the HW101 to be used with alot of different mics.
The cheapest was the GH-12's a handheld mic. Then in the $50
range were the HD21, 121, 121A, dynamic mics by ElectroVoice IIRC.
A really nice looking cast polished cast aluminum head on a heavy
base. Towards the end there were the HDP-242, and HDP-444 (Shure 444D)
dynamic mics. Very ugly black plastic base mics, with adjustible
height.

I have the used the D104, Shure 444D, and ElectroVoice, and I like
the ElectroVoice best, but they all sound about the same.

My choices in mics for the HW101 would be hi-Z dynamic first, and
ceramic/crystal, last.

Stock D-104 should kick that and the VOX fine, I recomend a 6CQ8 for the Mic amp in those.

> Also, anybody having experience with these rigs,
Yes, the drift of the lousy designed VFO is the pit's !
Worst problem is some kits were shipped with aluminum comb brackets many kit builders tried to solder, those underside boards must be grounded individually with bus wire.
Speaker hum from insufficient isolation (factory wiring harness)

DeWayne:

After watching the radio equipment trading activity on most major boards and sites on the Internet, a few weeks ago it was concluded by several hams with questions like yours that some appropriate standards would be helpful to most traders.

As a result, a group us has been working on some radio equipment standards that can be used to grade the condition of any radio equipment. The final draft of the standards is being compiled not and will be ready in a day or two and placed on this board as well as others for traders to react to. A lot work by experienced hams went into the standards so it will be worth waiting for.

In the standards, the term "mint" in avoided. Instead the term "AS NEW" is clearly defined as are NEW and EXCELLENT.

Cheers,

AL

# 1725. Anyone done a Yaesu FR50B VFO modification (digital)

Newsgroup: rec.radio.amateur.boatanchors

Source record: 33798
Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Hi. The old FR50B is quite a nice Rx. However, this budget rx needs modifications to make some needed performance improvements. Just wondering if anyone has done a digital VFO mod. I could simply put in a pretty stable VFO (capacitor tuned) and add a digital frequency counter, but I'm really wanting zero drift and precise frequency readout, and I think only a digital VFO will give me that. VFO could also tune the Tx. So, if you have done all the design and put in a digital VFO, please let me know. :c) Later on I'll probably be asking about a filter mod. I have the RadCom mod articles by G3YUQ & A8346. I need the Rx circuit diagram. I wonder if it could be emailed me. Thanks. Rich.

Email: news_emailREMOVE@ntlworld.com

Have to remove "REMOVE".

As "I recall" the zero switch position was for just that. To zero beat
the frequency.

Course that was 40 years ago...and I was wrong one other time.

I understand there is a chart or table in the military SX-28A manual
that gives resistances from each socket pin to ground.

Could someone please post a copy in alt.binaries.pictures.radio ?

TIA

73 de Leigh W3NLB

# 1729. Radio Identification

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-04 16:27:53 UTC
From: "J. Keith Carter" <j.keith.carter@sympatico.ca>
Message-ID: <3E64D409.BB001ED3@sympatico.ca>
Source record: 33802

Some time back I acquired a very pretty transmitter/reciever manufactured by a company identified only as " RCE " and a model number " TR8 ". It is in a sheet metal case 15' wide 13" high and 7" deep. It has a fold down front cover exposing the front panel. The receiver is 3 bands, LW, AM and SW probably up to 18 MHz. The main dial resembles a national ACN. The tubes are the miniature battery types, i.e. 1T4, 1R5, 1U5, 3A4 etc. A total of 10 with the transmitter. The transformers are Hammond, audio, modulation. The lower part of the cabinet was for the dry batteries. Probably two "B" and "A's ". I think the radio was produced in Canada and may have been used by the then Ministry of Lands and Forests for fire towers and portable work. However I have contacted some old timers from that era and they don't recognize it. If this description has jogged someone's memory and might need a photo to help, I do have a few low res JPEG's I can forward. Any help would be very much appreciated. Keith, VE3JKC.

The entire manual can be downloaded for free from the BAMA archive site
<http://bama.sbc.edu>

It is a little hard to page through because it is stored as a bunch of
huge GIFs, but it is all there. At a quick scan I see a table of tube
socket voltages, but not resistances ... but maybe I missed it.

The resistance charts go on for about 8 pages. If you don't find what you need at this website, send me an email and I'll snail-mail you photocopies.

Regards,

Phil

Hi Phil,
I downloaded the manual from the KG7BZ web site. I see what you mean
about the size of the resistance charts.
Thanks very much for the offer.

If they need that much extra 'C' to get to frequency then that implies
that the 'L' has diminished. I think the copper wire has corroded in
some form over the years. I have a multi-tap, multi-winding Rx coil from
the 20's which has continuity on all windings and taps but will not tune
to any frequency!

From: la8ak.xnd@online.no
Message-ID: <3e652c55.214910114@news.online.no>
Source record: 33815

Have moved my site, it is also updated a lot, but not all figures from the old location is found. In the first 7 days it was visited by 1800, and the strange thing is that you woun't find it with Google search.

My site is also linked to LA6NCA's so you may find a lot of German equipment to watch, but not all text is yet translated, and not all Norwegian sources has been found

I've decided to use only the neccessary quality on the pictures, the sizes of jpg pictures are seldom over 30k, but it is easier to dowload the material without too much delay - even with ISDN connection.

Glad that worked out. I would strongly recommend the military manual for anyone working on an SX-28A. Very thorough. The theory section is great for understanding how the receiver works. The several pages of resistance charts are extremely useful for troubleshooting, listing all the components to check if you find above-normal or below-normal readings on any tube pin.

Regards,

Phil

# 1756. Hammond transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-05 06:10:28 UTC
From: dstalk@exculink.com
Message-ID: <oxg9a.18529$cB3.105527@nnrp1.uunet.ca>
Source record: 33830

Can anyone provide me with any information about the following
Hammond transformers? Hammond was not able to identify them.

432
374
368
47020
59812

The 59812 appears to be a power transformer with 4 windings.
The open circuit voltages are:

black - black: primary (115 V)
green - green: 7.4 V (#16 gauge wire, drops to 6.3 V at 8 A)
red - red/yellow - red: 590 Vct
yellow - (yellow) - yellow: 9.8 Vct (#17 gauge wire, at least 5 A at 7.5 V)
black - white/black - black: 9.8 Vct (#17 gauge wire, >5 A at 7.5 V)

The transformer is rated at 60 VA. If the filament windings
are really 6.3 V and 7.5 Vct, then they alone deliver 117.5 W,
which just doesn't add up.

Thanks and 73,

Don ve3hur

Yes, but is it in "mint" and "like new" condition??

:)

# 1763. Custom Transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-05 15:13:09 UTC
From: Hans Summers <Hans.Summers@Tudor.Com>
Message-ID: <b45466$1s8njn$1@ID-61331.news.dfncis.de>
Source record: 33836

I have located a UK company Airlink http://www.airlinktransformers.com/ able to wind me a custom transformer for the PSU of my all-valve 80m/20m CW/SSB tranceiver project, at what I consider to be a reasonable price, given that a transformer the size I am looking for seems to be impossible to find otherwise, new or old. The cost is substantially less in QTY 10+ so am looking for other interested parties.

These are high quality 225VA toroidal transformers with 20cm flying leads supplied with mounting hardware. The secondaries are:

2x 250V @ 250mA (for series 250-0-250 or parallel connection)
6.3V @ 10A (filament supply)
5V @ 3A (suit GZ33, GZ34 etc. rectifier filament).

Prices are:

1+ £36.25 (US $58)
10+ £17.21 (US $28)
25+ £15.40 (US $25)

Postage is £8 per box of 8 to me here in the UK. Onward shipping would be £6.95 to UK destinations but likely to be substantially more overseas.

Anyone interested?

# 1765. NEW UNIVERSAL RADIO EQUIPMENT GRADING STANDARDS (UREGS)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-05 18:56:24 UTC
From: Al Link K4ICL <K4ICL@Charter.net>

NEW UNIVERSAL RADIO EQUIPMENT GRADING
STANDARDS (UREGS) READY FOR REVIEW

Greetings All:

A few weeks ago, a group of hams combined their efforts and created what, hopefully, will become a useful set of criteria for judging the condition of ANY radio equipment and assigning a condition GRADE, for use by traders.

We researched existing grading standards from the Collins owners group as well as the Drake owners group and made needed modifications and additions to make the grading standards UNIVERSAL and applicable to any manufacturer or style of equipment.

The final DRAFT of our efforts are provided for your perusal at the following URL:

http://www.parismtnsignco.com/UREGS.htm

Please feel free to respond with any suggestions, questions, and other feedback you might have.

Thank You!

The UREGS Committee

AL and guys....thanks!! very much
Looks like a good deal AL....However you present it as "law" and say
"will have" instead of "should have"....I will be glad to use it, but
its still one mans opinion when it gets past new, dont you think? And
its still just a suggestion or a tool, a classification that we may use
if we choose to use the "standard" And I like it but you need a few
Texas in on it, so we will know what size boots to wear..hihi...73
Murray #8. No way...its just "without manual" equipment can still be
as new, yes?//// Average? but needs repair...? pretty liberal are you
guys democrats? hihi... I dunno its close, but may bear some updating..
Not perfect but getting there!!! We can use it!!!

Well, I hope you all had a lot of fun building up these designations.
Because that is going to be all you are going to get from your effort.

They are too complicated. They are written in a language level far
above the elementary school level understood by most people. There
are too many conditions required for each level.

Keep trying. When you can condense the information into one sparse
easily remembered sentence per level you will have achieved your goal.

73,

Chuck, WA3UQV

Anyone have info on when this rig appeared? An excerpt from
the '41 Allied catalog goes:

10 to 14 watt portable or emergency trans-
mitter to operate on 110 volt 60 cycle
AC line or from 6-volt storatge battery. De-
signed.... 807 & 6V6G RF, 6W5 rect., 2 6J7
& 6V6G in modulator.

AWA "30s night" coming up next week & thot I'd have a fling with it

A schematic would be a HUGE help too.

H-U-G-E!

Thanks!

Marty

Your in LUCK!

My neighbor is a Sanitation Engineer and sends all radio & electronic tube stuff my way. Last Friday he stopped by with a near mint Thordarson Transformer Manual, publication date 1940. On page 14 is the description & pictures. On page 15 is the schematic & parts list. To confirm the set, does it have a vibrator mounted on a rubber grommet suspension?

FWIW, It uses Bud OEL coils, end linked, no tap.

I will try to scan the pages and store as djvu. Please confirm your email address so I can foward the data.

Regards,

Charles

Message-ID: <b46321$1s8jsh$1@ID-150848.news.dfncis.de>
Source record: 33849

Long shot, but has anyone done a calculation or a measurement of volts, and amps ratings for the windings of the HT32A power transformer? I've got a good transformer I could dispose of, but I need this info before selling as I'd subsitute original with new transformer(s) having 230v primary (I'm in UK). (Trying to save myself effort of determining ratings if someone already knows them). I've also some other HT32A bits, like the switches, facia, meter.TIA. Rich.

Much too complicated and no radio meets EACH criteria under each category. Most hams will not take the time to use this many items to grade their radio and will still use his "judgement". That is where the problem has always existed. Good attempt, however. A cabinet scratch on a new radio while taking out of box should not lower the unit down to a good condition. A new cabinet would be cheaper than to lower the grade to a good in most cases. I do not see but a few trying to use this system as it now stands, just too in depth. Thanks for stimulating us on the matter. I helped devise the CCA Collins grading scale years ago and even that was difficult and pertained to Collins specifically. 73 San K5YY

Here's the data for the Peter W. Dahl company's replacement:

HALLICRAFTERS HT-32A POWER
MAIN POWER TRANSFORMER T4
CORE) EI-175 X 3 29G M-6 STYLE #) 06 E-I LAMINATED CORE
PR) 117 VAC 60 HZ

S1) 880-270-140-0-270-880 VAC @ 300MA CCS

S2) 6.3 VAC @ 11A CCS

S3) 5.0 VAC @ 3A CCS

S4) 5.0 VAC @ 3A CCS

DM) HT = 4.250 WT = 5.250 DT = 4.375 MD = 3.500 MW = 4.375
PRICE) $235.00 Plus S&H FOB El Paso, TX WEIGHT) 19 LBS

Ed

Fantastic, thanks.

What I was figuring on doing is having a custom-made toroid transformer made with 230v primary and selling the tfmr at a price to at least cover the cost. I might possibly be able to do that and still offer a bargain for anyone wanting an original tfmr. I'll see.

Rich.

S1 is tricky, how do I work out the VA of S1? Or, how do you specify it in terms of secondary voltage or current. If I want to have a custom tfmr made, producer asks for total VA for transformer as a whole and, the currents and the voltages of secondaries. S1 is a CT with several output voltages, and I'm stuck as how to quantify this winding. I could specify it as 1760 VAC @ 0.3 A, but would that be correct?

# 1786. Trade QST's for boatanchors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-06 04:17:38 UTC
From: Kevin Thomas <kg9il@sbcglobal.net>
Message-ID: <CZz9a.7182$3g.989868@newssrv26.news.prodigy.com>
Source record: 33859

Hi All,

I have a bunch of QST's to pass on. They will not fit in my smaller office in our new house. 1954 thru present. I am currently cataloging them to make sure I have every one. I dont want to go thru the headache of breaking them up and selling them individually or carting them off to a hamfest. Looking to trade for something to complete one or more of the stations here. I prefer a Chicago area deal. Would drive 100 miles or so.

Would consider:

RX to team with the DX-40 undergoing restoration here....Drake 2B... HQ-110/S-100.....HQ-170/S-200..

Drake RV-7 or RV-75 to go with my TR-7

Heath accy's to go with my 303/401 pair...SB-610,620,630,650.

Ideas?

Thanks
Kevin

AW c'mon Chuck....you got thru the 5th grade didnt you? This system is for the educated anal retentive hams, of which some days theres seem to be a lot, other times...among the missing HI HI.... We can still use the one through 10 method for average deals, doesnt much matter when so many hams cant see or count anyway.....You pays your money and you takes your chances...helps to be smart AND lucky!! OR BUY FROM PROVEN RESOURCES Like me!! 73 Murray

BINGO! The newgroups have gotten a bad rap. I've used my real name and email since day one, and don't have much of a problem at all. I also use a Firewall, a dynamic IP and a proxy server on my home network. Just about the only spam I get now is the amazingly lame stuff where they take a username and add the .com, .net, edu, .org, etc to the end of it. This mostly occurs on my work address which uses 3 initials, a number, and an edu.

I probably get 3 spam messages a week on both my accounts.

# 1789. RF coils for NC-57B

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-06 05:07:38 UTC
From: moe@msn.com
Message-ID: <18ec39de.0303052107.68c09b09@posting.google.com>
Source record: 33862

I am repairing a National NC57B. I found that several of the RF section coils have been fried and are open. The ones in particular are for the broadcast band and the next highest band. (the ones with the mega windings of course)

Anyone have coils from a junker 57B or similar that I can buy. National could have used the same RF section for many of their receivers in that era.

Thanks.

"I also use a Firewall, a dynamic IP and a proxy server on my home network."

Those items have nothing to do with SPAM.

I've unfortunatley used my "real" address and the SPAM is enough to make me consider creating yet another new e-mail address.

You're not kidding, Roger. Macromedia's Dreamweaver newsgroup is one such group. The tech people there will nag you endlessly if you don't top post. Other groups will nag if you do top post. In the end, I just do what I've been doing for years. What else can I do? If others don't like it, well... sorry about that.

I think I'lll just tell the manufacturer of custom-made transformers the specs and
let him/her figure out what S1 parameters mean in terms of how to build the custom
transformer if that is possible.

(I was actually thinking of replacing the transformer with 2 or 3. One for PA HT,
and one for the rest of the supplies).

(Gone over to sci.electronics.basics to see if someone can explain ratings of CT
secondaries).

I also use all of those things (I have the added advantage that I run Linux and am not concerned which viri or whatever other evil things are in the email). I've been using my real name and my real address since before the idea of spamming the net ever dawned on anyone. I get gobs of SPAM. But it is very easily handled with gnus under XEmacs, so that isn't really much of a problem either.

But I'm surprised that Mike says he posts with his real address and gets few spam messages. I did note that he has no signature, and that certainly helps... but I'm very surprised that his IP address in the headers isn't reaped just as often.

What I get, because I advertize two valid email addresses in the messages, is sometimes an easy way to immediately identify when something is a result of posting to Usenet. I'll get two identical emails, one for each address. That happens often when I happen to use google to do subject searches and post in groups that I don't normally frequent. Particularly if a message is cross posted to a lot "political" groups. Technical groups seem to be less of a problem.

Of course this can all be used for fun or evil too... ;-) Some years ago a particular group of net twits annoyed me. They were running a secret mailing list on the side, where most of the traffic was how to control newbies posting to a specific newsgroup. I happened to find out about it, and added a 4 line signature to a few posts for a week or so that read: "SPAM targets: ..." and had a list of about a dozen addresses. Every other address was that of a spammer, but every odd address was the mailing list. I warned my ISP (I did consulting for them) that they were about to get a complaint, and they about died laughing at the two that did arrive. Tsk tsk, seems it flooded the bozos with SPAM.

From: Hans Summers <Hans.Summers@Tudor.Com>
Message-ID: <b478tq$1sots5$1@ID-61331.news.dfncis.de>
Source record: 33867

230V wound for UK/European operation. However, I did also obtain a quote for a split primary 110V / 120V, which could be wired in series for 230V, or either used alone for US-type mains voltage. The split primary cost came out slightly more and if enough people were interested would be fine. I think the price is good, specially considering it's a toroidal transformer - the killer is postage to the US, the weight is 2.2kg.

Nice page, Brian.

Do you have a freq and sched for Radio New Zealand's old music
broadcasts? That would be fun. I work that area on HF SSB frequently
(I'm in Maryland), so I should be able to hear SW broadcast.

Is that Tux in the lower left corner?

Since you put a smiley after that, I figure you agree that "nice" and "working"
are the most important things for this, frankly, not too beautiful radio, that
we own to use, not to look at. (Unless of course its manframe and all modules
are Collins :-) :-)

Plus of course you were remarking on just how useful "mint" and "like new" are
on the Internet. No problem there either :-)

This place reeks with info. Like the Thordarson request from yesterday
& the amazing fast replies!

Now for TCS. I THINK it first was printed as the civvy 51Q in 1939.

Can anyone corroborate?

Collins reflector & google yield naught

THANKS!

Marty

I use several techniques:

1. I use a "non standard" newsreader and mail program. Outlook and OE are verboten to any of my computers, and for my kid's computer. If my progam were to become popular, I'd switch to something else.

2. Ad-Aware is run daily. I don't get many hits on it any more, but when I do, the site or program that put the little bugger on my computer is ignored or the program removed.

3. I have a list of nasty IP's that get directed to null. I hope people know that they often visit these sites in the form of banners. Bad stuff, and the banners and such are on some pretty reputable sites.

4. I have to accept some cookies. Only ones that go back to the original sender tho'.

5. Instant messenger programs aren't allowed on my machine.

6. File sharing programs are not allowed either. (try running Kazaa after running Ad-Aware. It won't run unless their Spyware is on your machine.

7. Surveys and other nonsense are not filled out.

8. Finally, Free is not! I'm not talking about good freeware, like the many fine amateur radio programs that are available for download, but "Free" sites where you go to them, watsh an animation, and get your computer pumped full of goodies! I recently spent some quality time purging a friend's daughter's computer of lop.com recently. It had integrated itself quite nicely into her system. On the same computer I cleared out over 200 instances of spyware. I installed my security programs and proxy server on it, and there has been a marked improvement in performance and spam.

While these things supposedly "are not related to spam", What can I say? They seem to work for me. The interesting thing is how many people who have spam problems are the same ones who post anonymously, or with faked addy's.

I'll accept the judgement that I am wrong, but can someone come up with a valid reason I don't get spammed? (short of saying I'm lying, which I'm not) ;^) I think that we are sharing more with the bad guys than we think we are. Go figure!

Leigh:
I usually listen to RNZI in the evenings on 17675 KHz. I live near Boston MA and I think their (RNZI) beam runs right through here and southern New Hampshire so the reception is quite good sometimes.

Tux??

--
Brian Denley
http://home.attbi.com/~bdenley/index.html

PS Here is a copy of John Figliozzi's RNZI shedule:
He posts these regularly in rec.radio.shortwave

R. NEW ZEALAND INT. PREVIEWS
Edition 239
Mar. 8-14, 2003 (UT)

Here are some listening suggestions for RNZI for the next week. Days and times are expressed in UT; frequencies are in kHz.; times and frequencies reflect optimum shortwave reception in North America. (*denotes RNZI-produced program. All other programs originated by National Radio, unless otherwise indicated.)

Frequency Schedule
0000-0505 - 17675 kHz.
0506-0705 - 15340 kHz.
0706-1105 - 11675 kHz.
1106-1305 - 15175 kHz.

Internet Audio
RNZI has greatly expanded its schedule of live audio streaming simulcasts. RNZI also offers listeners to opportunity to hear several of its programs on-demand via internet audio. Please refer to <www.rnzi.com> and click on "Audio Links", for further information.

Live Sports Coverage Scheduled This Week:
Sat. 0435 - RUGBY SUPER 12 - Waikato Chiefs v. Queensland Reds from Hamilton.
Sat. 0635 - RUGBY SUPER 12 - Auckland Blues v. Canterbury Crusaders from Albany.
Sun. 0800, 1105 & 1305 - CRICKET WORLD CUP - NZ v Zimbabwe from Bloemfontein.
Fri. 0635 - RUGBY SUPER 12 - Canterbury Crusaders v. Waikato Chiefs from Christchurch.
[Regularly scheduled programs preempted for the duration of each event.]

---
RNZ News on the hour except where indicated.

SATURDAY
0006 - YOUR MONEY - Bruce Wallace and a panel of investment advisors discuss financial trends and options.
0030 - THE SATURDAY COMEDY ZONE - "Off the Wire", a light-hearted news quiz featuring some of New Zealand's top comic talent.
0104 - EUREKA! - Exploring science in NZ with Veronika Meduna.
0130 - ENVIRONMENT MATTERS
0206 - HOME GROWN with Liz Barry - New Zealand music, new releases and music industry information, until 0400; including at -
0230 - MUSICAL CHAIRS - "Rangi Parker". She was part of The Shevelles, a Maori female trio hailed as New Zealand's answer to the Supremes. They released five singles in the late 1960's, with two making the top 20. Dalvanius played piano and traveled to Australia with The Shevelles, before going on to form his own Fascinations. And when The Shevelles went their separate ways in the 70s, Rangi made a name for herself as a soloist.
0410 - TAGATA O TE MOANA - Pacific news, features, interviews and music, giving an insight into the diverse cultures of the Pacific people.
0507 - THE MIX - Live recordings and interviews with contemporary pop musicians.
0604 - SATURDAY NIGHT with Peter Fry - Music, reminiscences and entertainment, including at 0930, "I'm Sorry I Haven't a Clue", a BBC comedic panel game.
0912 - DEEP PURPLE - Thoughtful and relaxing music with a touch of nostalgia.
1006 - MUSIC TILL MIDNIGHT
1105 - NZ FORCES PROGRAM - for NZ troops stationed in Papua-New Guinea and East Timor. (to 1300)

---

SUNDAY
0006 - AT THE MOVIES - News and reviews with Simon Morris.
0030 - BOOKMARKS - Ruth Todd and Morrin Rout look at books and book people.
0104 - NGA MANU TAIKO - Maori Leaders and Leadership. The third of an 8-part series exploring Maori leadership issues, including in depth interviews with six Maori leaders, and a leadership debate. Today: Iritana Tawhiwhirangi.
0204 - RPM - An ongoing series of the best acoustic features and documentaries from New Zealand and overseas. This week: "Tokyo's Burning". On March 10th 1945, the most devastating civic fire in history was unleashed on Tokyo. In just a few hours about 100,000 Japanese civilians died and a million homes were destroyed. (A production of ABC Australia.)
0306 - WORLDPLAY 2003 - "Evesdrop Dead", by No lle Janaczewska. A drama of water, suspense and identity in a land of droughts and flooding rains (An ABC-Australia production.)

0410 - TOUCHSTONE - Spiritual exploration and debate, with Melanie Thornton.
0440 - JAZZ SPOTLIGHT with Haydn Sherley.
0507 - WHENUA - People, issues and music in Aotearoa, with Henare te Ua and Libby Hakaraia.
0604 - ONE IN FIVE - The issues and experience of disability.
0706 - SOUNDS HISTORICAL with Jim Sullivan - This week: Auckland before the harbour bridge.
0906 - MEDIAWATCH
0938 - SUNDAY SUPPLEMENT
1006 - NIGHTCAP
1100 - NZ FORCES PROGRAM - for NZ troops stationed in Papua-New Guinea and East Timor, including, at 1205 SPORTSWORLD, a 50 minute summary of the week's sporting highlights.

---

MONDAY-FRIDAY
0006 - CADENZA - Light classical music--baroque, romantic, symphony and song--with Peter Fry.
0105 - IN TOUCH WITH NZ - Afternoon variety with Wayne Mowat. Including WAYNE'S MUSIC at 0106, AUER WEATHER at 0206 and REPEAT WITH FADE at 0230.
0300 - *PACIFIC REGIONAL NEWS.
0308 -
Mon.: TAGATA O TE MOANA (refer to Sat. 0410).
Tue.: RNZI TOP 5 - A countdown of the top pop singles here in New Zealand along with a sample of the latest Kiwi Music, hosted by Greg Tatere.
Wed.: PACIFIC REPORT
Thu.: MAILBOX - listener letters and DX news.
Fri.: DATELINE PACIFIC - The major Pacific stories of the week, with background and reaction from the people making the news, presented by Don Wiseman.
0330 -
Tue.: NEW RELEASES
Wed.: TRADEWINDS - Walter Zweifel compiles this weekly programme featuring Pacific regional business and economic news and features
Thu.: WORLD IN SPORT - Dmitri Edwards presents highlights of the world's sporting week with emphasis on New Zealand and the Pacific.
Fri.: PACIFIC CORRESPONDENT - Our regional correspondents talk to Don Wiseman about political and social issues in their respective Pacific countries.
0400 - CHECKPOINT - News and current affairs including Business Headlines (at 0415), News and Sport (at 0430), and Mana News (0454).
0507 - WHAT'S GOING ON? - Lynn Freeman presents a daily update on arts and entertainment.
0530 - WORLDWATCH - the stories behind the international headlines.
0545 - STORYTIME - for younger listeners.
0604 -

Mon.: EUREKA! (refer to Sat. 0104)
Tue.-Thu.: TODAY IN PARLIAMENT.
Fri.: COUNTRY LIFE - News and views from rural New Zealand.
0630 -
Mon.: ENVIRONMENT MATTERS (refer to Sat. 0130)
Tue.: YOUR MONEY (refer to Sat. 0006)
Wed.: MUSICAL CHAIRS (refer to Sat. 0230)
Thu.: BOOKMARKS (refer to Sun. 0030)
0706 - CHECKPOINT - (a repeat of the 0406 broadcast.)
0800 - *PACIFIC REGIONAL NEWS
0808 -
Mon.: MAILBOX - listener letters and DX news.
Tue.-Fri.: NINE TO NOON with Linda Clark - Current affairs and topics
of
interest.
0900 - NEWS and LATE EDITION
1006 - Tue.-Thu.: TODAY IN PARLIAMENT followed by--
Mon.: THE MIX - (refer to Sat. 0507).
Tue.: SHOWTIME - music from stage and screen.
Wed.: IN A MELLOW TONE with Haydn Sherley.
Thu.: PIONEERING RHYTHM AND BLUES LABELS - The 9th of a 12-part look
at the independent record labels that sprang up in the 1940s and early
50s to cater to black audiences that were not being served by the
majors and in turn produced classic rhythm & blues and rock & roll.
Tonight: Modern Records.
Fri.: NIGHT MANOEUVRES - Liz Barry showcases a special late night
selection of NZ electronic and semi acoustic music. Tonight: DeJusa, New
Zealand dance fusion from Krackatoa and more. (Pt 5 of 6.)
1106 - NINE TO NOON (a repeat broadcast of 0808).
1206 - NEWS and LATE EDITION - (a repeat broadcast of 0900)

RNZI broadcasts at other times of the day as well. The complete
schedule and other useful information can be had by checking
<http://www.rnzi.com>.

Next regular update to be posted by 0500 UT Fri. Mar. 14.

Good Listening!

Phil:
I have read you terrific SX-28 site from 'cover to cover' several times over
the last year or so. It's been very helpful already. But I am still trying
to work up the courage to tackle that RF section - wow is it crowded in
there!

My SX-28 (see pics on my site below) is pretty nice but there is some mod in
there I have not figured out as yet. I found a large precision (wire
wound) resistor that is only connected at one end and left like that. I
haven't been able to trace it as yet. It may be part of an old mod to the
AVC or an
aborted attempt to fix it.

One issue plagued me when putting the receiver back together after my first
set of repairs: What washers to put on what shafts. I was dumb enough to
not take careful note of which washers I took off the various shafts and I
could not find ANY info in the halli manual or the mil manual of that
hardware. Did you take any inventory of those items?

Thanks for the help!

There are at least two versions of the non-A, jsut to add to the confusion.
The earlier version had Hammarlund-style miniature variable caps for trimmers,
and gear-driven bandspread just like the main tuning. Later models used mica
compression trimmers and string drive on the BS. Can't tell them apart from
the front or back, though a twist of the BS tuning will tell all. 73, Mike K.

It means the Genuine Imitation Leather is still soft and pliable :-)

BTW, I went thru a couple pieces of Collins gear, and the CCA rating system seemed to be overly complex and overly picky. I guess that's appropriate for the gear involved, but maybe not the usual Heathkit or Hammarlund or Johnson.

Haven't looked at the Drake system, but I bet it has a special code for copper chassis condition :-) 73, Mike K. AA1UK

I thought of that, but that would be the VFO, right? So maybe "Zero" keys the
VFO but not the driver tube, so you don't swamp your receiver. Good feature.

BTW, the shielding on the Ranger (and probably Valiant) VFO is so tight that
when I first got the rig, I thought the VFO was dead, cuz I couldn't pick it up
on a SW portable next to the rig. First time I put on the dummy load and tuned
it up, the VFO was dead on freq. 73, Mike K. AA1UK

FOR SALE:

Swan 350 transceiver with 117XC power supply/speaker cabinet.
All in good operating condition with manual.

Power input 400 watts PEP on single sideband, and 320 watts input on CW.
Also will run AM, Single Sideband with Carrier, 125 watts dc input on all bands.

Has AGC, ALC, and grid block CW keying. Unwanted sideband down at least 40 db.
Carrier suppression at least 50 db. Sensitivity: Less than 0.5 uV for signal-plus-noise ratio of 10 db.

Controls for Rec-Tune-CW, AF Gain, RF Gain, Mic. Gain, Bandswitch, Carrier Balance, PA Plate Tune, PA Grid Tune, PA Load Coarse, PA Load Fine, VOX-PTT Switch.

Rear controls for Bias, Grid-Block CW Key Jack, Jones plug power connector, Vox connector, S-Meter Zero.
Uses a pair of 6HF5 finals.

When the 350 was introduced in 1965, the price was $420.00, the 117XC was $95.00

Swan 350 available for $195.00
Swan 117XC available for $85.00
Swan VX-2 is available for $35.00
Will sell the Swan 350 and 117XC for $250.00
All of it for $270.00

E-mail me for pictures or see:

My guess would be that the ballast tube (3TF7) is blown. Locate on the
chassis and check to be
sure it is intact. You should be able to see if the filament is intact.
If it is broken, you can insert a 10 Watt 50 ohm resistor in the two
holes used by the 3TF7. This will get it working.
Nice find. It is considered better than the more common R390A/urr.
I would suggest joining the R390 Reflector at qth.net. A really
knowledgeable bunch.
73,
Chuck

Jumpers on 2 terminal strips are numbered starting with 1 on the left
from rear view.

1 to 2 = IF Gain
3 to 4 = AGC
6 to 8 = Phone Jack

6 and 8 are 600 output to speaker

10 to 13 = line audio
11 to 12 = line audio
14 to 15 = Diode Load

6 jumpers and one speaker output in all.

Terry

Those do match the symtoms of a "mute" line not being shorted. My
drakes act the same way if you unmute them. IE: S meter pegs as if you
rolled the gain all the way back. I don
t know what those connections are on the collins, but surely someone
out there knows being those were fairly common. On all the older
drakes, the mute line is called "mute". I don't know if I would be
keen on just willy nilly shorting pins to test. I would try to find a
manual or someone who has one that knows first. Doesn't really sound
too serious whatever it is. Should be a keeper if it's lighting up
with no smoke. MK

It's worth sacrificing a little self esteem when you can find a receiver
like the R-390 in someone's trash! :-)

Message-ID: <v6k1hvbivnc46c@corp.supernews.com>
Source record: 33776
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Greetings All:

A complete copy of the UNIVERSAL RADIO EQUIPMENT GRADING STANDARDS (UREGS) is now available at:

http://www.parismtnsignco.com/uregs.htm

Hams trading sites are already using the UREGS. You are invited to have review them when you have the time.

If you have any constructive suggestions for improving the UREGS, please free to send them me or any other member of the UREGS team.

A few have voiced a concern that the standards are lengthy. This is because of the requirement that they be applicable to ANY radio equipment.

Thank You!

The UREGS Team

The introduction says these standards are to be used for VISUAL evaluation.
Why isn't the operational condition considered? Maybe your new system should
be revised to include this important criteria...

>
UREGS grading is based solely upon the visual condition of the equipment
determined through a close visual inspection of the equipment. This grading
standard may be applied to any piece of amateur radio equipment, and does
not rely upon equipment reviews, marketing information, or any other
external subjective resource.

And there is an interesting modification to boost the IF gain for probably
less than a dollar at metrovan@yahoogroups.com John M.

# 1860. FS - Heathkit Manuals

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-08 22:25:31 UTC
From: Wayne <ke0bz@arrl.net>
Message-ID: <3E6A6DDB.B1036A3C@arrl.net>
Source record: 33783
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have a number of Heathkit manuals for sale. These are in excellent condition with few marks. Any check marks were done in light pencil that can be easily erased. Prices include shipping in the lower 48. Postal money orders prefered.

Model IG-102 RF Signal Generator $10.00
Model IG-18 Sine-Square Audio Generator $10.00
(This one has a small scrape at the top of the front cover - looks like a piece of tape had been removed- part of word "Model" has been obliterated.)
Model IN-47 Capacitor Substitution Box $5.00
Model IN-27 Decade Capacitance Kit $5.00
(Has date written in red in on bottom of front cover and part of
front cover has been folded over at one time. No marks inside)
Model IN-17 Decade Resistance Kit $5.00

I would be willing to trade the entire lot for an SB-104 manual in good shape with the full schematics. Please reply directly.

Thanks,

Wayne L. Faris, KEï¿½BZ

Thanks for taking the time to comment.

Perhaps that section could use some rewording. However, if you read the rest of the criteria you will see that functionality is VERY important to grading the equipment.

Cheers,

The UREGS Team

# 1862. 73s to W2ZLM. Any takers for old equip in good shape?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-09 01:56:26 UTC
From: petee100@aol.com
Message-ID: <20030308205626.19663.00000174@mb-bd.aol.com>
Source record: 33785

Final 73s to W2ZLM Marty Enghauser... Marty passed away recently after 50+ years on the air. He left a lot of old equipment behind which I'm trying to dispose of, listed below. All equipment works fine and in most cases we still have the original user manuals. Equipment is located in the Northern Virginia suburbs of DC. Can arrange for interested parties to come by and view the equipment if desired.

You can post responses to this newsgroup but direct email would be better.... petee100@aol.com.

Thanks, Pete Enghauser N4ACQ

- TenTec Omni-D Transceiver circa 1978 - 10, 15, 20, 40, 80, 160 meters.

- Henry 2KD-2 2-Amp amplifier circa 1968

- Hallicrafters HT44 transmitter - circa 1962 - Should work okay but may need some vac tubes.

- Hammarlund HQ180A general coverage receiver - circa 1962 - a little beat-up but works fine.

- Heathkit HW-16 CW Novice Rig - with 6 or so original crystals.

- Mosely TA-33 beam - 10, 15, 20 meters - circa 1968 - Tower has been standing in the yard for 35 years. A little rusty and the crank cables need to be replaced but otherwise still sturdy. The beam itself is in pieces (one element fell off) but all pieces accounted for and seem fine. Relatively new rotation motor (10 years old?) and control box. Am planning on digging it up sometime soon. Will give it away if someone wants to help dig it up and/or haul it away.

- All kinds of miscellaneous bits and pieces - mikes, keys, speakers, etc.

I've got a bunch of tiny ball bearings sticking to a magnet that I thought belonged to the S-40 I took apart. (The two "large" BBs are in place at the back end of the band switch shaft. The BBs in question are much smaller.) Maybe, I left something out of the 'back end' of the Bandspread shaft where it mounts to the tuning capacitor assembly????

Hi..
I have a Heathkit HW-101 with a two pin mic connector.
Does anyone know the disignation for this connector and where to get one?
(This is the first Heathkit I have owned..)
Or does anyone have one in their junk box to sell?
Looks like a fun rig. I have a EV Mic that I want to hook it up to.
Thanks for reading..

## 1873. Yaesu Gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-09 16:19:41 UTC
From: porky <porky@cfl.rr.com>
Message-ID: <xQJaa.36606$Aa.596984@twister.tampabay.rr.com>
Source record: 33696

I am selling more of my collection of Yaesu FT-101 gear.

I have a Yaesu FT-101EE, YC-601, FL-2100F for sale. All in great condition. Nothing over $350.00. If interested, e-mail me at porky@cfl.rr.com. I do not frequent news groups that often because my work takes so much of my time. Thanks for reading.
73 "Porky" KA4ZSG

# 1874. Yaesu FR50B: Is my assumption correct?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-09 16:32:25 UTC
From: Richard <nearlynews_email@ntlworld.com>
Message-ID: <b4fq7h$1tne99$1@ID-150848.news.dfncis.de>
Source record: 33697

Maybe this needs considering or even testing out by FR50B owner, my FR50B at moment is in bits. I don't have the RX manual.

When the RX was working, no-matter what band I was on, the BFO was set at 456.5Khz. So, whether I was on 80m LSB or 20m USB, I never had occasion to alter the BFO setting.

Well, I'm looking into the receivers operation, and it must be that the 455Khz filter is very wide otherwise I could not have got good copy on USB.

For SSB, the carrier has to be at either side of the IF passband depending on LSB or USB. When a good RX says displays the frequency it is tuned to, it's in a situation where the received carrier lands in the IF passband at either of these points, not in the centre of the passband.

Now if you apply this to 80m for the FR50B you see the following:

Received carrier 3500 Khz
VFO: 8672.4 khz
1st IF: 5172.4
Xtal Osc: 5628.9 Khz
2nd IF: 456.6 Khz

2nd IF passband centre is at 455 Khz, so received carrier (if there was one, this being SSB) is in right position re the passband. You inject a BFOsignal on 456.5 Khz to replace the carrier.

Okay no problemo.

Lets go to 20m

VFO:

Received carrier 14000 Khz
VFO: 8872.6 khz
1st IF: 5172.4
Xtal Osc: 5628.9 Khz
2nd IF: 456.5 Khz

Egads, the carrier of the 14000 Khz signal is again at 456.5 Khz. Well, that's the correct position for a LSB signal. The only way I can be getting good copy is if the 455 Khz filter is about 6Khz wide. I was expecting the carrier to land at 453.5 Khz.

My assumption therefore must be correct, the 455 Khz IF is so wide the received carrier can land at 456.5 Khz and it does not matter if sideband spreads out above or below this.

Any comments? Esp from a FR50B owner, who might be able to reproduce reception.
Rich.

First, you need to shorten your line lengths. As it is, the lines
are too long and it makes it difficult to follow what you are saying.
It would be far easier to simply ignore your posts than to bother
trying to read them on a terminal that doesn't have such wide line
lengths.

On one band, the rig is using the sum of the VFO and IF, on the other
it is using the difference. This results in the correct sideband
being used despite no change on the BFO frequency. Read the thread
in rec.radio.homebrew about a 9MHz BFO, where someone is making the very
same mistake you are.

If you used shorter line lengths, I might be bothered to answer in
more depth.

As to line lengths mine might be about 10% to 15% longer than your line length. I mean yours aren't exactly small are they. Also, there are more folks out there than VE2BVW to answer my enquiries.

But, sticking to the technical aspects, what must be happenning then is a kind of frequency inversion. Energy at 14003 khz lands not at 459.5 Khz, but at 453.5 Khz. Whereas on 80m energy on 3497 Khz lands (again) at 453.5 Khz.

Unless I am mistaken I don't think you need to answer at more depth.

Thanks.

Rich.

Source record: 33708

In the 1930s, the short-wave radio craze was just beginning to sweep the nation, and Hallicrafters radios began to boom from coast to coast and around the world! Until the 1980s, this Chicago-based firm aimed for the average consumer, and produced high quality radios on the cutting edge of technology, all reasonably priced. Today, collectors of electronics are fascinated by these pieces of radio history, most of which can be restored to their original working condition.
This book includes over a thousand photographs of radio receivers, transmitters, speakers, early television sets, electronics accessories, and advertising material. Technical descriptions are provided for every known Hallicrafters model, including dates of production, model numbers, accompanying pieces, and original prices. A current price guide is included for collectors.

$20.00 plus shipping from 60516. Book is in very good condition and will be shipped by Media Mail to keep your cost low.

Message-ID: <3E6BD465.3232@mindspring.com>
Source record: 33658

Some folks make the mistake of thinking such a "Modulation Reactor" was used "Only" for Heising modulation. Some have even called the high level plate modulation systems "Modified Heising" modulation. This is NOT the case. The Modulation Reactor was used in the normal plate modulated class C radiotelephone transmitters to prevent the combined plate current AND the modulator current from flowing in the modulation transformer. The "Modulation Reactor" was used along with a "DC Blocking" capacitor to prevent the flow of the class C plate current in the modulation transformer secondary. This helped prevent the saturation on the Modulation "iron" This allowed the use of "Less" iron in the transformer and improved low frequency responce. Now you know the rest of the story. Regards, W4EAS Sparks, Retired Broadcast Engineer.

The voltage of a NiMH is a little less than the carbon-zinc batteries of
the '60s. Probably nothing you can do except oil it up real good.

# 1889. Eico 723 Low Grid Drive

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-10 01:05:20 UTC
From: Carl Strode <crstrode@webbworks.com>
Message-ID: <3E6BE4CF.7AE8464F@webbworks.com>
Source record: 33711

Greetings!

Here is a challenge for you folks . . . especially those of you without a shock of grey hair, and all of your teeth.

My Eico 723 (three tube 80 through 10 crystal controlled 60-watt CW transmitter vintage 1960) has low grid drive only on 15 meters.

Plenty of drive on 80, 40, 20 and 10.

On 15, the max drive is only about 1.5 ma.

If I hook up the 722 VFO, the indicated grid drive is even less.

I have not checked the 722 VFO yet, but since with any xtal, and even with the VFO the 15-meter grid drive is low, I am leaping to the conclusion that the 723 has a problem.

The part that bugs me is that the drive on 10 seems to be great, only low on 15. Typically drive or output in all-band tube rigs tends to fall off proportional to increasing frequency.

My first thought was a bad switch contact in the band switching circuit,

however I have cleanded and measured ad-infinitum with no improvement. I've even swapped out the 6CL6 oscillator tube just in case . . . no change.

I have not operated a 723 for over 25 years, and cannot recall how my original novice rig behaved. I don't think I ever even saw a manual until recently.

The 723 I now have puts out from 30 to 40 watts depending upon the band which seems to be about right for the rated input.

Of course it chirps, with the chirp getting progressively worse from 80 to 10. 15 seems to be the worst.

Any suggestions?
Please ... Help
I'm about to slit my wrists!

Also, when trying to neutralize the rig in accordance with the manual, adjustment of the neutralizing capacitor does not seem to have much, if any impact. When watching the grid drive level on 20 meters and then adjusting the plate tuning, on the very slightest movement of the meter is noted, regardless of where the cap is set. I have set it as best I can to a place that has the smallest of twitches, as opposed to a slightly larger "twitch".

Oh, yes, just in case you folks were planning on using the old stand-by of: "sorry, we don't have a schematic or a manual" here is a link to all of the good stuff:

Well if you haven't operated this rig in over 25 years, your
hair and teeth aren't going to last much longer either, so don't
be getting uppity you whippersnapper.

>My Eico 723 (three tube 80 through 10 crystal controlled 60-watt CW
>transmitter vintage 1960) has low grid drive only on 15 meters.
>
>Plenty of drive on 80, 40, 20 and 10.
>
>On 15, the max drive is only about 1.5 ma.

The manual says that 1.5ma is the "maximum" for CW, so you don't
really have a problem. (Besides, unlike my younger brother, I
still have hair.)

>If I hook up the 722 VFO, the indicated grid drive is even less.
>
>I have not checked the 722 VFO yet, but since with any xtal, and even

>
>The part that bugs me is that the drive on 10 seems to be great, only
>low on 15. Typically drive or output in all-band tube rigs tends to
>fall off proportional to increasing frequency.

The 6CL6 xtal oscillator stage operates as a tripler on 15
meters, assuming your VFO or crystal is at 7mHz. (If the VFO
output is on 3.5mHz, things are even more strained!) Typical
operations would be a 7mHz crystal, the 6CL6 is a tripler, and
the 6DQ6 final is a straight through amplifier on 15 meters.

On 10 meters it is a little different, and _both_ the 6CL6 and
the 6DQ6 final are operating as doublers. Hence the 6CL6 will
deliver more drive for 10 meter operation than for 15 meters.
(Hence it should be the same on 10 as it is on 20 meters, where
it also operates as a doubler.)

The output to the antenna will probably be significantly less on
10 meters though!

>My first thought was a bad switch contact in the band switching circuit,

>which seems to be about right for the rated input.
>
>Of course it chirps, with the chirp getting progressively worse from 80
>to 10. 15 seems to be the worst.

Hmmmm... it really shouldn't do that. There could be two basic reasons, one being the load on the VFO is changing as you key the later stages, and the other would be if the voltage on to the oscillator is changing. Assuming you mean it chirps with a crystal, try replacing the bypass capacitor on the screen of the 6CL6, C3. Also you might try replacing C15. (Only if it is easy to do, as that is unlikely to do anything. You might first try putting a 100uufd cap across it and see if things are better or worse. If better, replace C15.)

If it chirps when the using a VFO, replace all of the bypass caps in the VFO output stage. Particularly the screen bypass, but also any that are on the B+ to the plate. (Actually, replace the others on the 6CL6 too. It's just that the screen bypass is the most likely villain.)

The other possibility is that the voltage change from load to no-load is the cause. Again that could be old capacitors too (C12 and C13), though I'd expect you would also have a pretty bad hum on your signal if the power supply caps were bad. I'd replace those electrolytics just because.

And if you are powering the VFO from the 723... get a different power supply for the VFO.

>Any suggestions?
>Please ... Help
>I'm about to slit my wrists!
>
>Also, when trying to neutralize the rig in accordance with the manual,

>is noted, regardless of where the cap is set. I have set it as best I
>can to a place that has the smallest of twitches, as opposed to a
>slightly larger "twitch".

Maybe replace C29.

Note that all of the bypasses, like C2, C5, C9 etc are
questionable. You can put another cap across each of them to
see if there is any change, or you can just order up a bunch of
new caps and replace them all.

>Oh, yes, just in case you folks were planning on using the old stand-by

Sorry, I don't have any kind of inventory or sketch that would help with the washers. My practice when disassembling things is to put back all screws & whatnot where they came from, as much as possible, as soon as I have removed the larger part in question. If I take off a faceplate or backplate for instance, the mounting screws go back into their original holes as soon as the plate is loose. Then you can't lose the screws or mix them up. When I take off a shaft with several washers & nuts, I either reassemble them in the right order on the removed shaft or stick them in correct order on a length of masking tape which I then stick to the shaft for later reassembly. Taking "before and after" pictures is helpful for complicated disassemblies. I realize this advice may not help much now, if you are trying to find your way back to Kansas using a Crisco can full of parts, but perhaps it will prove useful next time.

Re the old half-connected resistor, cut it off and toss it. Who cares if it's a mod or botched repair -- if it doesn't match anything in your schematic, out it goes.

Regards,

Phil

The paragraph reads:
2. Tune the driver and final amplifier stages
for MAXIMUM meter deflection, using the
DRIVER TUNE and FINAL TUNE controls.
Advance the RF LEVEL control slightly, if
necessary, to obtain reasonable meter read-
ings for tune up.

Source record: 33726

I'd suggest inserting a p.a. plate current meter
to check the resting current and balance of the 6146's.
(figure 9, page 15) Be careful, the meter is
at 800 VDC (both terminals). Set the bias pot (R61) for 40 mA
resting current for a pair of matched 6146's.

Hallicrafters really messed up by not including a plate current meter.

Carl .... That drive situation re grid is about the same as mine. The 723 should not have a problem with a chirp as I have never gotten a bad report on mine since 1965 except after a long dormant spell where the PS caps went south. I need to build the FET keying switch that was on the NorCal page so I can get my K3 keyer on line with it. BTW the K3 doesn't work well with the 723. I mistakenly left the 723 in the key-rig switch box. The K3 omitted a sound akin to someone stepping on a cat's tail. I have had some programming problems since ...but it essentially still works. All in all the 723 works pretty good .......what other rig is out there that has a meter that doubles as a monitor via the "clang".

Hi all.
I have a really clean and operational Swan MB-80A.
Anyone out here have a schematic for it?

Hey, I have a mild hernia, surgery was not suggested, but, I suspect
I would hurt myself lifting that sucker in to the car.
All that is on the curb around here are old washing machines and
rusted out grills. A R390 on in the trash. I am living in the
wrong part of the world!
I hope he gets it going.
Terry

I have never heard of one, but if you call ICM or JAN Crystals, they
will have heard of it if it exists and they'll know where to get one.

I don't drive a car, so finding an R390 would be problematic.
I sure wouldn't leave it there, but it sure wouldn't be easy getting
it home.

I once did pass a Tektronix scope waiting for the garbage truck, and
since I have one as old as I am, and I wasn't going to take it, I
didn't even bother to look closer to see the model number.

You make the sacrifice for the things that are worthwhile,
and leave the things that merely tempt you because it's a shame
for the stuff to go to landfill.

Great for parts or restoration.

All of the tubes work. Has been partially recapped ( filter caps done ).
All the original knobs included. Chassis has been cleaned up.

The rig powers up with the filter switch, but blows the fuse when
the plate is switched on.

The front panel is not the best cosmetically ( chipping in the paint ).

Copy of orginal manual included.

$160 plus shipping.

I will accept cashiers check, money order or PayPal.

email: nadybo@yahoo.com with questions .

73,

Matt

Michael

I changed line lengths because they were a tad long.
They were set at 82. They were at 82 characters to try
try to ensure URL's did not wrap, but it never really
works.

Maybe my posts will be easier to read. I don't know.

Rich.

Sample:

Broadcast entertainment really began in the USA in
1920. There, many hundreds of stations were soon in
operation, swamping the airwaves. In Britain, the
approach was more cautious. Experimental stations were
tried at the Marconi site at Chelmsford, Essex, in 1920
and in 1922 at Writtle, a village nearby. This is the
Writtle transmitter, callsign 2MT......

No. In my experience, they are very reliable. Once
working, they need little maintenance.

Source record: 33651

Anyone have or heard of one of these critters? I ran across the specs for this in a UTC catalog: 50H at 350ma. These were used once upon a time in Heising modulated a.m. transmitters. I ran across the schematics in an ARRL handbook; it was labeled as inefficient, hehe. In any case, I figure this could make a dandy plate load on a 304TL-based amplifier circuit I'm working on. They're probably a little beefy, though; I'm guessing about 40 lbs. If anyone has any specs regarding parasitic capacitance or resonance frequency (< 500 pf or > 3kHz respectively would be cool), or a line on where to get one, please shoot me an email.

Thanks, Gary.

Sometimes yes, sometimes no.
It depends on what they have for a browser and how it's configured.
If the browser is configured in a simple straight forward way with all
addresses legit, you can usually tell.

I own several of the commented BAs (SP-600, R-390A, R-388, AR-88D, ...
more at http://jvgavila.com ) and heaviest one in my collection is the
AR-88D. I can move by myself all the others but the AR-88D is out of my
possibilities. And, on the other hand, has a great audio and very good
stability... weight related?

And, of course, I would use the ABS if I see an R-390 on the street :-)!
(or any other BA)

Regards,

JOSE

Hi,

I am looking to buy the following Eaton/Ailtech/Singer/Stoddart antennas. They must be operational, and be in good shape. Here is list:

1) 94623-1 1-18GHz horn antenna KIT. It is used with the NM-67 and consists of 5 different antennas with reflectors and mounting adapters. It would be nice if it had the transit case, but I will take it without. But it must have all antennas, reflectors, and mounting brackets.

2) 94592-1 Rod antenna coupler 10Khz to 32 Mhz

3) 94607-1 Rod antenna preamplifier

If anyone has any of these lying around the shop, and would like to part with them, or if you know anyone that has them please e-mail me at:
maxshiloh@yahoo.com
Thanks

I'm going to make you folks weep with rage and grief.

When I was outprocessing from a TDY at Osan AB, Korea, back in 1969, I walked by the MARS shack as they were tossing *several* R-390s (non-A, IIRC) into a dumpster. I was told I could have as many as I wanted, but my hold baggage was already en route, and there was no way I could lug one onto the plane. *sigh*

# 1941. BFO problem in R390 non-A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-11 16:45:03 UTC
From: knudsenmj@aol.com.Oscar
Message-ID: <20030311114503.20346.00000220@mb-mm.aol.com>
Source record: 33666

All this R390 discussion reminds me -- my R390 (which someone at a swap meet begged me to take for only $150 -- took it home, plugged it in and it played great) is still working fine except two problems. The calibrator is dead, but someday I'll pull out its 4 tubes and figure that out.

Bigger problem is that the BFO center freq is off. Zero beat with the IF center is way over to one side, so I can recieve only USB or LSB (I forget which). I've tried removing the knob and turning the shaft directly, bypassing hte limit stops on the knob and panel, but it hits an internal stop and won't go any farther.

What I'm hoping is that there's a trimmer cap inside across the coil that I can tweak to re-center the range. What I'm *fearing* is that the ferrite slug is broken in two. In fact, ISTR that I figured out the BFO center freq was high, not low, so may well be a broken slug.

Any ideas before I try taking this beast apart? (It isn't as "easy" (hi hi) to take apart as the R390A). Tnx es 73, Mike K. AA1UK

Anyone else ever fool with a CV-157 (I think that's right) ISB "adaptor" for the R390 series? Dual chassis melded into one. Magnificent Rube Goldberg contraption with motor-driven AFC. The motor drive circuit was clearly designed on a cost-per-tube military contract. I think 40 tubes total. I was both sorry and relieved when I sold mine. I got it free when I bought my R390A -- I was told it was part of the package deal, and I VOULD take it! 73, Mike K.

Tom Coates <tecoates@comcast.net> wrote:
>I wonder what's involved in winding one.

Not too much. Unless you need carefully calculated saturation curves
(for swinging chokes, etc), making inductors is easy and lots of fun.
Get a nice big transformer, tear off the old copper and start winding.

For applications where linearity isn't a big issue, you can get nice big
cores from old streetlamp ballasts. Ask the city maintenance folks for
some. They throw them out when the windings go bad, and they are usually
good for some pretty heavy current.

For a modulation choke, you might want a higher grade core, though.

A major warning, if you have to disassemble the mechanical gearing
(i.e. removing the RF deck). There should be a "GREEN" gear attached
with a screw to the frame. It is needed to maintain sychronicity of
the gears with the rest of the radio. If you remove the deck without
it properly mounted (per the book), you'll NEVER EVER get it aligned
up again.

ISTR the 390A didn't have said gear.

And there is a guy on the internet who overhauls 390's for a flat fee
of around $500, which is a good investment. This receiver still
outperforms anything built these days, except for the lack of a
product or FM detector.

If that guy is Chuck Rippel, he does excellent work and found an intermittent problem on my 390A that I'd been trying to track down for ages (and two other techs had told me didn't exist).

If anybody has an outboard product detector for these things, I would really appreciate hearing from them. I considered trying to build a homebrew with a sheet-beam tube but too many other things got in the way.

Whoops! I am mistaken. I gave the jumper settings
for the accessory VFO socket. Which wasn't standard
on the 350.

There are NO jumpers required for the chassis mounted
accessory socket.

1 - XMIT audio in
2 - XMIT audio gnd
3 - RCV audio out
4 - -10V
5 - N/C
6 - +12V
7 - VOX accessory out
8 - Chassis GND.

I downloaded the schematic for the TMC GSB-1 SSB adapter from
BAMA a while back. It has an interesting 2nd detector using a
6BE6 for both AM and SSB. For SSB the sig goes into pin 7 and
the BFO into pin 1. For AM the sig is switched to pin 1 and the
BFO shut off. Is anyone familiar with how well this works?

73, Roger

Probably only marginally since there is do product detector for the
sideband. The circuit you described appears to be merely switching the BFO
in and out to beat against the incoming SSB signal and insert a bit of
carrier so it can be copied.

I once bought an SX-101 at a hamfest for $35. On a dollars-per-pound basis,
that was the second-cheapest rx I ever bought. (First place goes to the working
$2 BC-342-N which I still have).

Then had to carry it about a quarter mile to the car. I'm not sure, but it
seems like all the sleeves on my long-sleeved shirts shrank about an inch while
I was at that 'fest...

If you want nice SSB check out this, you dont need to build that.
Problem is the AGC is to sluggish for SSB speech and it distorts the last IF and detector.
BFO injection can be to low in some

Look up the simple Dallas Lankford SSB mod, Then add a 30 Pf disk in parallel to the BFO injection capacitor.
(dont forget to re neutralize if needed)
The SSB improvement is so drastic its shocking.
I have rewritten Dallas Lankford's SSB mod for the R-390 (non A) its to easy not to try if you need.

For even cleaner performance.
Pull the AGC rectifier tube and make a voltage doubler detector with 2 1N60 and 2 .01 disc's. (make it on the bottom of the AGC tube socket)

-Joe

# 1961. Re: UTC LS-102 Modulation Choke

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-11 23:55:23 UTC
From: Gary <gary.wheeler@attbi.comm>
Message-ID: <LHuba.45478$L1.8951@sccrnsc02>
Source record: 33683

Per Hanna's method, if I were to wind one, specs would be:

Weight - Approx. 25lbs (11kg)
Size - Approx. 6"L x 5"W x 6"H with brackets
Core - 4" stack of 0.1mm lam with 3" tongue E-I, or equivalent double C core
5,750 turns of 25ga (0.45mm) dia wire, random wound (E-I) or highly
vertically sectionized (C)
4,500H inductance ungapped core
47H inductance with 0.028" (0.7mm) gap.

I need 175ma standing current, so 25 gauge should be fine. I'd guess the
LS-102 has 23-24 ga. I ran across a table with specs for wire used in
inductors:
24AWG (0.51mm dia) , 39.0ft/ohm 21.0ohms/lb 25.7ohms/kft 1.22lbs/kf 0.54amps
0.81max amps
25AWG (0.45mm dia) , 30.9ft/ohm 33.4ohms/lb 32.4ohms/kft 0.97lbs/kf 0.43amps
0.64max amps

I don't have a winder or any of the materials, so winding one myself is
tough...

Another way is to rectify a little Line Ouput audio,
filter it a touch and use it to drive the AGC line
down to prevent overload. I works very well and I
have both of my 390A's modified with it. Just adjust
the line gain to modify the agc response for SSB
reception. Makes a major difference. And, it mounts
on the rear terminal strip, no holes, no muss, no fuss.

Good idea. I have a Navy Scott RCH that was modifed by Bob Roehrig in IL to do just that when the BFO's on. It works perfectly on CW/SSB, really smooth.

Especially nice since this RX is one of those typical mil jobs with a single knob that controls both RF and AF gain together. --Mike K. AA1UK

You didn't say -- is the signal also still on pin 7 during AM?
If you hit both grids with the AM carrier, you should get a square-law
detection. But I would expect some distortion, from the sidebands beating
against each other as well as against the carrier.

Am sounds just fine as is on the R390 (A or not). And if you're going to
switch the signal around and switcht he BFO on and off, you've got the contacts
to do things right. My R390A has a mod that subs a 6BE6 in the BFO socket, and
a little plate relay to switch the audio when the BFO tube conducts. Now to
get it working .... Mike K. AA1UK

> to 10. 15 seems to be the worst.
>
> Any suggestions?

I changed the VFO buffer/doubler tube to 6AU6 which has less feedback
than the original 6CB6. The chirp is now only slightly noticeble on the
28 MHz band. Pins 2 and 7 on the socket must be reversed.
There was hum from the VFO, so I feed the oscillator heater with DC from
a rectifier diode and a 1000 uF filter cap. Changing the tube didn't help.

# 1978. Please help... KRIS 23+ CB Base Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-12 14:01:28 UTC
From: k5dh@raytheon.com
Message-ID: <Y4Hba.132$35.858@dfw-service2.ext.raytheon.com>
Source record: 33601
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

Greetings from Texas!

I am restoring a Kris 23+ tube-type CB radio base station.
It came to me with no tubes installed, and no other info.
I need to know what tubes are used in this set. My radio
is a later model. The earlier model, which is covered in
Sams Photofacts volume 45, is different from the later
model in many ways (the two models don't even have the same
number of tubes in them!). Is there a Sams for the later
model? If so, what volume? At least knowing what all of
the tube types are will be a start.

Thanks and 73,
Dean, K5DH

PS: To the hams who will no doubt be tempted to bitch at
me for posting a CB-related query on the ham radio groups,
I'd like to point out that hams have been a much better
source for this kind of information than CBers. I guess
that's because the majority of hams used to be CBers. -DH

while diagnosing the receiver I noticed some 'broken' parts that I would like to replace. if anyone has a junk r390 parts radio or a parted out rf deck I need to 2 cores or slugs on the rf deck these slugs are from the Z210 and T204 inductors. still chasing the main receive problem. I can here the calibrator very faintly with the bfo on but cannot hear anything with the bfo off.I think the meter pegging is just from control on if assembly out of adj?while listening to the calibrator with the bfo on I played with some controls: af and rf gain seem to work,of course bfo control works and also the filter width control. I have pulled the power supply, af assembly,if assembly and rf deck with no noticable burnt parts. I do have 180 volts in test jack.al tube filaments are lit. receiver is missing the 3tf7 ballast tube but I was told 50 ohm resistor at 10w's would keep radio running? seems to work ok. maybe should do 12bh7 mod? I figure if I gewt no receive at all should be in rf deck? John

by looking at the schematics I would say no to the jumper. I am going in a different direction than connections or settings. John

If you have all the pieces of the broken slugs, don't
be afraid to crazy glue them back together. They will
work just fine.

Unfortunately, there's still a "disconnect" somewhere. The
tube list on that web site sez 6AQ5 for the audio amp, but
my set has a 9-pin socket, so it can't use a 6AQ5. It has
not been modified by a user, so there must have been more
than two versions. Could be a 6BQ5, 6AW8, 6GW8, etc. I'll
have to find someone who has a radio of the same version as
mine and see what theirs has. :(

The search continues...

Hi All,
Firstly, I would like to appologize for the cross post,
for those it anoys, but desperation has set in.

I would like schematics & any other relevant information for a
PCM FM 351 8ch VHF radio, Model 351E Serial 5139
It appears to be approx. mid '80's vintage.

Made by PCM Electronics Pty/Ltd. Melbourne, Australia.
This is now a non-existant company.
In the true spirit of Amateur/Ham Radio I wish to
modify this unit to press into service for Amateur
Radio use as I'm close to AOCP/AOLCP License.
Regs exam pending :)

To see what it looks like goto:
http://www.thebear.dropbear.id.au/Radio/

Please forward any info by email on the WEB Page
if possible thanks.

TIA

The Bear();

But I've used that hand truck plenty since then, moving junque around the garage or the basement.

Maybe start a new thread: How to move our big rigs around, especially as they get heavier over the years. I tend to keep my favorite RX on rugged wooden tables with casters, like those microwave carts, or an old school desk with casters added.

A desk swivel chari makes a good temporary BA carrier too. --Mike K.

Yes, and maybe an age range, and how about a QTH? When dealing with these older radios, local pick-up and delivery are worth thinking about.

If you're anywhere near Maine, I have some opportunities for you!

Well I got my R390A from an old army supply sergant who brought it home
so his wife could listen to shortwave from her home island. When it
stopped working he put it down his basement until yours truely came
along. Got it free and help loading it in the car!

I took it to Rick at Miltronics in Toledo, Ohio. He restored everything,
thats all Rick works on are the R390A's. They are sent to him from all
over the world.

I still remember having to have a Top Secret clearance to operate that
receiver back in the early 60's. I was a young Air Force radio operator
back then. Got it sitting next to my Icom 781 and it works great. I
had forgotten it does not have a built in speaker, so I use my headfones.
Sure brings back a lot of memories from those days.

You trying to figure out what is supposed to be there?

Find the pin for the plate, the pin for the control grid, and the
filament pins, and we'll see what we can come up with.

The majority of hams used to be CBers? What?
Anyway, you put some nice 10M crystals in that thing, a BFO,
and a key, and then you might be getting somewhere.

***At the present price of electricity and the probability that it
will go no place but up, the cost of operating an R-390 with it's
large abundance of tubes will be high. As I recall it also has a
circuit that keeps the oscillator filament on when you shut off the
receiver. This is to retain frequency stability for a quick turn on.
Hot receiver for CW and RTTY, though. Yup, it is a heavy sucker too.

R390A's, atleast, have a built in oven that keeps the crystals,
and VFO warm so they don't drift when ambient temperature changes.

They also have a switch that shuts off the ovens if you don't need
them.

The power consumption with the ovens on is about 220 watts. Off, it is
about 80 watts. Just like a light bulb. Hardly worth getting in
a tizz over.

Erm ... not exactly, as the rental-car ad has it. Rick did a *great*
job on an all-Collins R-390 (non-A) that he sold me two years ago. It
is at the high end of superb.

And, as my MARS-shack story shows, in 1969 they were UNCLAS and being
retired from use by MARS. Are you sure that you didn't need the TS to
be where the gear was? I've never seen an R-390 or R-390A with any
sort of classification legend on *it*. On the cover over the window
showing the frequency, sure.

# 2003. FS Hammarlund HQ-170 and matching speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-13 02:58:56 UTC
From: Ron Gerut <rgerut@megsinet.net>
Message-ID: <3E6FF3F0.A1894C6@megsinet.net>
Source record: 33626

Hi!

I am selling an HQ-170 Hammarlund receiver with matching speaker. The receiver is in great working order. It is a triple conversion receiver and covers 160 through 6 meters. It does have working original clock on the receiver, which is hard to find for a Hammarlund. Nothing needed done to it. Also cosmetically it is great. No scratches or dents on it. Looks new. The speaker looks and works great as well. I believe it is a 10 inch matching speaker.. I give it a 9 out of 10. There is one little dent on the upper back corner of the speaker and a few scratches on the side and top. I am asking for $300.00 for the receiver and $50.00 for the speaker. A manual will be included with the receiver. Shipping will be and additional fee separate from the price of the receiver and speaker. Hope to hear from someone soon.

Ture, but the driver is also a big fat 42 tube. Check that the cap that feeds its grid isn't shorted. Also make sure that the push-pull output tubes have negative bias ontheir grids or their cathodes are positive. A shorted cathode bypass cap, or bias filter cap, could rob your bias there. --Mike K.

Hi Murray,

I've been told that a couple of nukes high in the atmosphere and the EMPs will destroy anything
digital. Then only the ones with the tube rigs will be on the air. 'Course we probably won't have
commercial/residential power then either ?

Looks suspiciously like a Philips 828 to me - is it a crystal controlled radio by any chance? Also does it have a label down near the back with information on it - i.e. model, serial, etc? Are there more numbers on the ID plate than what you have already provided?

The cost of electricity has gone up more than 30% during the past three
months in my area. That may not be significant for a device using
80-watts on stand-by, but when you include all the other electrical
devices in the house it adds up.

Then it was a good buy!

Don't forget to bring along bits of old carpet or blanket to protect
the paint job.

I remember when I sold my two EFJ Viking IIs and 122 VFO (sniff).
Buyer showed up with a hand truck and bungees, toted the whole pile in
one trip.
>
> Maybe start a new thread: How to move our big rigs around, especially as they

> tables with casters, like those microwave carts, or an old school desk with
> casters added.

Good ideas! Here's another, if you have an automotive floor jack handy
and make your own shack furniture: Put casters under the two rear
corners, and have a spot in the front where you can put the jack and
roll the whole thing around.

I changed the subject line to reflect the new direction of the
discussion.

An option for moving individual BAs is a child's wagon, if it's built
sturdily enough. Or a garden cart.
>
> A desk swivel chari makes a good temporary BA carrier too.

As long as it doesn't tilt back too far.

--

I've been building my shack furniture for more than 30 years now,
partly because it's cheap once you have a power saw, partly because
most available furniture is the wrong size and shapes, and partly
because of the weight issue.
I'm no cabinetmaker - it's all 2x4s, 2x3s, plywood, OSB and masonite,
held together by nails, glue, drywall screws and 1/4" bolts 'n' nuts.

Shack is in the basement, anyway.

The 80 watts isn't on standby, it is in full operation.
The ovens are there for use in very cold areas.

The ovens are also for use if you need extreme stability for RTTY operation.
With the ovens on, you can tune to something using 425 Hz shift, come back
a week later and it's still on tune. Without the ovens, it'll be printing
gibberish.

# 2024. Open circuit voltages of Hallicrafters HT32A power transformer.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-13 20:42:24 UTC
From: Richard <nearlynews_email@ntlworld.com>
Message-ID: <b4qqc9$227fub$1@ID-150848.news.dfncis.de>
Source record: 33497

Hi. If anyone has a Hallicrafters HT32A power transformer, is it possible for you to accurately measure the secondary open circuit voltage, and post them here? Obliged if that could be done. I'll send you a nice box of English chocolates for the XYL if you will do me this favour.
TIA. Rich.

---

The loaded voltages are as per below. Obviously, secondary open voltages should read higher.

S1) 880-270-140-0-270-880 VAC @ 300MA CCS

S2) 6.3 VAC @ 11A CCS

S3) 5.0 VAC @ 3A CCS

S4) 5.0 VAC @ 3A CCS

***I bow to Chuck on the 80 watts. Should have done my homework.
For certain, I thought it would draw more. However, when we
increase to 220 watts for RTTY/CW stability purposes, while
it won't drive the owner into bankruptcy, it will add up if used all
day, every day. I remember drooling over the prospect of owning one
which I eventually did. Now, I would not bring it into the house,
primarily because of the weight factor. How times change. Anyhoo,
to the new owner(s) out thar, have fun and enjoy the receiver. It
has a lot of history, especially in the military and intelligence
communities.

FOR SALE:

Hallicrafters SX-28A Super Defiant Receiver.
Excellent working condition. Good power cord. Sounds great.

Looks great. I can't see any rust in it. Everything is there and fine looking. All functions work fine, except that the bandspread tuning dial needs to be restrung.

The push pull 6V6 output on this radio is hard to beat for quality sounding audio. AGC knob looks just like the original but is a replacement.

Like most SX-28s, this one has no case and is rack-mountable.

Will sell for $275.00 plus shipping

E-mail me to arrange purchase.

The unamplified D104 just has the mic element wires run directly to the cable. I would imagine that the amplified unit uses the same mic cartridge. So, just run the wires directly, and remove the amplifier gunk.

I use a tug8-d104 on my c-line, all I did was solder a 1 inch jumper from where the element connects to terminal board and where mic cord connects to terminal board. remove battery and leave amp in and wired for another radio down the line. you could rape the mic by cutting out amp and removing it and rewiring mic but maybe a year from now when you are looking for an amplified mic you will say "why did I do that?" good luck John w3ayt

Maybe because you forswore CB?

Seriously, what rigs, other than CB, like an amplified microphone?

None of the old tube rigs, because back then, an amplified mic was
all but impossible. None of the solid state stuff, because it is
so easy to build the preamp in the radio.

The D104 is a very high output crystal mic. It already puts out more
signal than any other unamplified microphone, except perhaps a carbon
mic.

The amplified D104's were marketed to the CBer's It helped them get
that splattered sound they all loved so well.

It's high output (actually I don't think it's all THAT high) only into a high impedance. Feed it into a low-impedance rig like any of the modern stuff and you won't get enough output to drive them. In that case the amp is probably working as more of an impedance matcher than an amp. I built an amp into the base of mine just for that reason. It's a one-transistor circuit I found in the Handbook, powered from the 8v in the mic jack meant to run an electret element. I used it with my TS430 and IC735 and now with my 706. Works fine. There was an article in QST a few months back about how to use the D104 with modern rigs, altho they used an op-amp. Same idea...

So it's not only CB'ers...

If you go to www.radioshack.com then you can use their search engine
to find documentation for all sorts of current and discontinued
products.

Use variations on the model number, such as MTA-20, MTA20, and also
the Radio Shack stock number, etc as it has them listed under
variations.

I appreciate all of the thoughts gentlemen. Thanks for the help. I also have read many articles about using d104s on newer radios as well as boatanchors. I get good reports with this amplified version on my FT 101. Think I will just bypass the amp and leave it all in there. Thanks again, 73

I've had good luck with many RS manuals on there, although I seem to
do better with the stock number as a search term.

The website/warehouse seems to have different stock than the retail
stores, and the left hand/right hand thing is in effect.

# 2052. Re: D104 amplified to non amplified

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-15 03:29:08 UTC
From: Chuck Harris <cfharris@erols.com>
Message-ID: <b4u6sm$q8m$1@bob.news.rcn.net>
Source record: 33525

Impedance match, that's an angle I hadn't considered. So, I did
an informal survey of ham radio transceivers that I have, or
could easily find schematics for on the net.

S-line, Kwm-2, Swan350, HW101, SB10[0,1,2,4], Drake TR[2,3,4,5,6],
Yaesu FT101, all use essentially the same circuits for mike input.
(The solid state units do it in transistors)

```
MIC >---47K----+------Grid
|
1M
|
MIC >----------+------GND
```

The 1 meg resistor changes to 2.2M for Swan, and 6.8M for Drake.
Some are direct coupled to the grid, others are capacitor coupled.

The SS9000 and SB104 use a 1M input impedance, but I don't have
the circuit in front of me right now.

I don't know what the Japanese SS ham radio stuff uses, because I
was never interested in it. So owners of Kenwood, Yaesu, ICOM,
If you are interested, take a peek in your owners manuals, and
see what the impedance of your mic amplifier is.

As to the signal from a plain Jane D104, a whistle test causes
it to flat top at 30mv p-p into 10 megohms. That's a pretty
healthy signal from any microphone.

The amplified D104 uses the following amp:

(set your browser to use a non proportional font!)

```
+ + +
| | |
| | 5<----|(--> OUT
| | K
R | |
| | +---+
| / | |
| |/ 6 |
MIC >----CAP-+-| Q1 8 |
|\ 0 |
v K /
| | |/
+---)|---+-| Q2
| |\
```

```
| v
1 |
5 1
0 8
MIC >--+ K 0
| | |
| | |
GND GND GND
```

The Q1 is an emitter follower, so it sets the input
impedance at "R", and has a gain of about 1x.

The Q2 is a common emitter amp, and it has a gain
that ranges from zero to about 27x. (gain = 5K/180)

So, given a maximum microphone cartridge output of 30mv p-p, the
maximum output from the amplified D104 can range from 0mv p-p to
0.8v p-p.

You should be able to adjust the gain stage for unity if you want
to.

The big advantage in the amplifier is it presents a uniform, high
impedance to the crystal microphone cartridge. This should result
in a uniform frequency response. I suspect that "R" is selected
by Astatic to match the particular D104 cartridge.

I change my opinion, the preamp is probably a good thing, that can
be used badly if you choose. I would leave it be, and adjust the
gain to fit the radio. If you want it to be like the original,
whistle into the mic, and adjust the gain pot for 30mv p-p.

Given the number of D104's running around we should be able to
find out, eh? Can a few people who own examples of these mic's
take a look and tell us what value the have for R?

My Johnson Desk KW shot craps. Problem found to be one of the two parallel plate coupling caps blew up.

These are Sprague TV door knob 500pfd @ 20KV. One of the later Sprague P/N is 20DK-5T.

Does anyone have some of these surplus to their needs? Does anyone have a source for these caps?

I noticed that several of these caps in the Desk KW are cracked and should be replace.

Please advise and thanks. Ken NA&#65533;Y na0y@worldnet.att.net

You're thinking of the K & E's, which had an LED decimal point option. The
Pickett's were all solar powered, and strictly analog.

From: gil <gilpi@mindspring.com>
Message-ID: <b4vfe9$q4$1@slb3.atl.mindspring.net>
Source record: 33532

Question for the more experienced hams:
Got the boatanchor bug about a couple of years ago and slowly have learned how to bring some of these older rigs back to life, but still got some questions on this.
I know recapping is probably the most important thing to do, especially if it has paper or wax caps.
Any other type of caps that should be replaced?
And what about resistors, should I bother with them even if they look and test ok?

Thanks

gil

Most resistors have drifted upwards in value, especially if run hot , and
should be replaced. Substitute twice the wattage for the discolored hot ones.

But if within tolerance, I'd leave it alone. 73, Mike K. AA1UK

Source record: 33536

Wax caps are just paper caps with a wax overcoat to protect against moisture, so they fall into the paper cap trashcan ;-)

The so-called Black Beauties will leak. They're oil-filled paper, and they develop hairline cracks and leak out the oil and dry up. Usually not noticeable, but this causes electrical leakage. They're usually fat, black plastic, with multiple colored bands. Always replace 'em.

I use 630V metalized polypropylene caps (the bright yellow ones) to replace all types of non-electrolytic tubulars. They're very stable, and smaller than the originals in all cases, so they fit! The so-called Orange Drops are good caps, but I don't like radial leads.

Mica caps (brown flat rectangles with colored dots) seldom go leaky, but they can develop mechanical problems of various types. I never replace them wholesale like I do the paper caps, but suspect them if they're in a circuit that's having problems.

Electrolytics always get replaced, of course. Watch the rated voltage. The original manufacturers frequently skimped on the ratings to save money. It's good to use a rated value at least twice the actual working voltage, if you can find such. For supplies of 250 to 350 volts, use 450-volt caps. You usually won't find higher voltages in a receiver.

Resistors are a different story - lots of different opinions on these. My feeling is that the originals were no better than 20% tolerance, and frequently not that good. If they measure within 20%, I leave them alone, since they haven't drifted very far in 50 or more years. If they're farther out, I replace them. Resistors, particularly higher values (470K +), usually increase in value with age.

The fact is, very few resistor values are critical to the proper operation of the radio. The most important ones are in voltage dividers in the B+ line which set the operating voltages for the tubes. Screen dropping resistors would be second in importance.

If the electrode voltages are not within 10% after you get the radio running, check these resistors and replace any that are off-value. But realize that operating parameters of the tubes can vary over a wide range, so suspect the tubes also.

And watch out for the voltage rating of the resistors. Many people don't realize that resistors have a rated voltage, but they do. 1/4 watt carbon comps are rated at 250 volts, 1/2 watt at 350 volts, and 2 watt at 500 volts. I don't remember the rating for 1 watt ;-( This is particularly important for bleeder resistors from B+ to ground, or

for equalizing resistors across series-connected electrolytics.

Hi, Leigh,

Where do you get these caps? I've used ODs and they are supposed to be some of the best as far as leakage, but, like you, I don't like the radial leads. I've been searching for some good axial-lead hi-voltage caps.

Thanks,

Barry - N4BUQ

From what I understand about the older ICOMs that is correct. They would need a pre-amped microphone.

The comments about not needing a amplifier of some rigs is not true BTW. On many rigs the audio amplifier is actually more of value as a matching device.

The high impedeance of the astatic mic will NOT match much of anything direct. Thus their little amp has its values. It also tends to smooth out the response.

As with most things in life....moderation on the amplification is the key.

Dan/W4NTI

# 2072. Hallicrafters S-38B LO frequencies.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-16 01:53:27 UTC
From: novatech@eskimo.com
Message-ID: <b50len$pu$1@eskinews.eskimo.com>
Source record: 33545
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave

I just finised recapping and tuning up my father's S-38B. It's not
that great of a radio, but it has "nostalgia" value.

Here's my question:

It seems to like to have bands 1-2-3 set so the LO is above the
frequency setting, but on band 4, it seems to work better with the LO
below the setting.

Images seem to be pretty band either way and the manual doesn't give
me a hint on the right settings.

Anyone know the correct S-38B LO settings?

The reason for asking, is that no matter how I set it, the dial
tracking seems way off.

Thanks.

Steve.

Don't know, but there's an S38B service manual online at
http://www.bama.sbc.edu - that ought to help.

Note: read the info on the main web page - you'll probably have
to use a real FTP client (not your browser) to retreive the files.

Many radios, including some fine ones, work like that.

>Images seem to be pretty band either way and the manual doesn't give
>me a hint on the right settings.

Top band on an S-38 (with only one tuned circuit ahead of the converter) is going to always have image response almost equal to the correct one.

>The reason for asking, is that no matter how I set it, the dial
>tracking seems way off.

You may have "crossover" LO, whereby the LO is on one side of the signal at one end of the band and on the other side at the other end of the dial.

If this radio has tuning slugs to set the LO at the low end, make sure you are consistently above or below the signal at both ends (the other end is the trimmer cap).

If the radio is so old that there's no low-end adjustment, then the LO's relation to the signal is fixed at the low end -- either above or below. Find out which it is and make sure the top end is set the same way with the trimmer.

I set mine below the incoming signal frequency on band 4. Yes, the calibration is off about 3/8th of an inch at the low end, but there is no adjustment for it. Yes, the performance leaves a lot to be desired, but always remember that it did not have to meet the specifications in order for it to be sold. I have modified mine with a 1-transistor amplifier to boost sigs on 3 and 4. miki ve7afn.

That's right. It's high side on the first three bands, low side on band 4.
The S-38s I've worked on have had pretty good tracking. The main tuning
indicator must be set to the line at the lowest part of the frequency scale
with the tuning cap fully closed. The bandspread indicator must be set to
the line at the highest part of the bandspread frequency scale with the
bandspread cap fully opened. Do all the alignment adjustments with the
bandspread cap fully opened. I've tried to do the alignment with the
bandspread cap closed. Doesn't work!

I get mine from Bob at Bob's Antique Radios:

http://www.radioantiques.com/supplies.html

These are made in Taiwan (or China?) and have the newer markings, like 473K rather than .047ufd. They have long tinned steel wire leads and look like the old Sprague Yellow Jackets. They seem to be very good quality. I've never had a problem with them.

Absolutely. And the Black Beauties also fail without any outward signs. I wonder if the failures are related to moisture released from the curing bakelite. The oil and paper caps in the soldered metal cans are quite reliable.

Yes, but not all rectangular caps with dots are micas. I've seen several paper caps in that package. And they were labeled "Micamold"! Be especially wary if that "mica" cap is used for something like a line bypass. Also, there was a bunch of other plastic encapsulated paper tubular caps of 50's and 60's. The ones from the late 60's are probably mylar. Early 60's production could be either. I check the leakage with a Heathkit cap checker. If I didn't have the cap checker, I could check them by connecting one end to B+ and the other end to a Hi Z VOM or VTVM. A small leakage current will show up as a volt or less on the meter. A really leaky one will deflect the meter almost to the B+ voltage. Checking one will indicate if the whole lot are mylar or paper. Or just replace 'em all.

Hi all, I have for sale an unbuilt Heathkit A-9B 20 watt general purpose amplifier.
Box has been opened and manual removed for copy of the specs then replaced in original box. The box has a 1-28-57 date on it. I would like $350.00 plus shipping from 61559 if you are interested. Here is a website that you can see and read about a A-9C. They look the same but probably some small upgrades from the B to the C. Better than me trying to type it all. :)

Hi, Barry,

REAL Orange Drops, made by Sprague, are excellent caps. My only gripe
is the radial leads. They are, however, available in high voltage, up
to 1600 volts, which is nice in some transmitters that I work on. I
do use them.

The yellow axial polypropylenes are readily available. I like the
ones made by Illinois Capacitor (www.illcap.com)... they're very high
quality, but there are other good brands also.

You can get them from Antique Electronic Supply (www.tubesandmore.com)
or from any major electronics parts supplier like Allied Electronics
(www.alliedelec.com) or Newark, Future, Hallmark, etc.. Perhaps
Digi-Key (www.digikey.com) also, tho I haven't checked. They usually
don't stock high voltage stuff. Maybe Mouser.

You're absolutely right about the Micamolds. There's a thread in
rec.antiques.radio+phono at the moment on just that subject, with pics

in alt.binaries.pictures.radio. In my defense, I said the rectangular
brown ones, and the Micamolds are black ;-0 But actually, I forgot
about the Micamolds since I've seen very few of them. They all go bad
and most were replaced years ago. If you find any, by all means
replace them without a second thought. Good call, Frank.

>Yep. And consider adding fuses, too.

Very true. I always add fuses, usually two, one in each side of the
line, if the line cord is not a three-prong style. I have a stock of
the double snap-in fuse holders for just this purpose (bought 100 of
them on ebay) Even with a grounded line cord, it's a good idea to
fuse both sides since you can't be sure that the house wiring is

correct.

I was just at a local part house to buy tuning tools. They have everything that GC used to have EXCEPT what you need. I did not see any reference to those tools, either. I have to assume they've been dropped from production. Looking at my collection of 100+ tuning tools, I have but one wand!! The GC part number is 8278 the WAL (Waldom??) p/n appears to be 2540. Sorry I don't have a few more.

Check with www.radiodaze.com
They have been able to come up with some GC gadgetry that can't be found
elsewhere...like the good 9488 wooden handle solder brush.

Thanks for the link, Bill. They do have a lot of good stuff, but not
the item that I'm looking for.

And thanks to K3HVG for the part number. I just ordered a tuning tool
set from GC ($30) which supposedly includes a "tuning wand" with that
part number, so I hope it's the right thing. Hate to spend that much
money just to duplicate the tools I already have.

Thanks again and best wishes.

Yeah, I only use AES when I have to. I generally use the commercial
suppliers like Allied or Newark. I'm an electrical engineer, been in
the business for 30+ years, so I'm familiar with the industrial supply
network. They usually have better service and better prices ;-)

What's a solder brush, and how is it used in radio work? It sounds like some thing I used to see Ma Bell's old time cable splicers using in the days of lead sheathed cables, when closing up the sheath.

Small wire brush for cleaning off crud before or after soldering a
connection. Its also the secret to being able to make good chassis
connections with a 40 watt pencil.
And handy for cleaning rust out of the tight spots on a chassis.

If you don't find somebody with an old bottle, you can buy it from
McMaster-Carr (p. 472 in the online catalog, www.mcmaster.com --
they call it "nonreversible temperature liquid", but it's
obviously Tempilaq). They want $11.09 for a bottle.

>correct.

I don't like the idea of a second fuse in the neutral side of the line, since
if it blows first, it could leave the whole chassis "hot" via leakage.

I believe it is your job to test and make sure your house wiring is properly
polarized, and to remind anyone to whom you sell a restored radio, or whose
radio you restore, to do the same. It's easy to check with a simple neon
tester.

So I would fuse only the hot side of the line, and trust that it really was
that side. Trying to play both sides of the game will leave you half-safe, or
less.

BTW, those "imitation" mica caps that are really paper are quite common in late
'30s thru WWII gear. Scads of them in National NC-173, Hammarlund HQ-129X
(where I replaced one back in the 70s) and BC-348. You can usually tell
because their values are in the nF (.001 uF) range, rather than pF (uuf) range
like a real mica would be.

It's not my job to examine the wiring in the customer's house, and in
the house of every subsequent owner. It's my job to make the radio as
safe as possible within the constraints imposed by the customer. If
they want a vintage line cord, there is no way to guarantee which side
will be connected to the hot side of the line.

I know they were commonly used. What I said was that I seldom
encountered them because they had failed and been replaced in the
remove past.

>Any other type of caps that should be replaced?

If caps are bad, replace them. Paper caps are very often bad after this
many years.

Some caps in IF strips are in places where they can take out an IF can if
they short. Replace those before they go bad, because they will go bad.

If electrolyics are bad, replace them.

>And what about resistors, should I bother with them even if they look and
>test ok?

If they are okay, leave them. Don't change things out unless they either
are bad or if the consequence of them failing is high.

Hi all:
I just picked up a neat old BC654-A (just the receiver) at an antique store. It was missing all the tubes, and I originally picked it up to salvage the nice variable cap and geardrive in it.

I'm starting to have second thoughts... AES has the full compliment of tubes, and another kind (internet) soul directed me to a link with schematics. I'm starting to get the idea I might be able get this thing working.....;)

The scan of the schematics are a bit fuzzy, however, and its not clear to me where power should be applied. I'm thinking the A supply is something on the order of 1.5 volts, and the B supply...? 64 volts? (It's *real* hard to read.) Then there is the matter of a "bias" supply with no voltage value listed...hmmmm.

Anyone out there have one of these? Have you gotten it working? Do you have a nice *sharp* scan of the schematics? Do you know what all of the voltages should be?

Thanks in advance, for any help. Please remove capital X's to reply

In the "old" AC/DC sets it might be a good idea as you don't know
which side is going to be hot , but normally fusing both sides of the
line can be dangerous.

A few of the old sets came with both sides fused, but they used non
polarized plugs and either side could be hot.

# 2131. Re: Restoring boatanchors question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-18 05:44:29 UTC
From: Phil Nelson <philnelson@antiqueradio.orgNOSPAM>
Message-ID: <1nyda.5715$pK4.609524@newsread1.prod.itd.earthlink.net>
Source record: 33454

There is a detailed article about recapping at
http://antiqueradio.org/recap.htm . Some restoration case studies
(Hallicrafters SX-28, SX-42, SX-88 . . .) can be found at
http://antiqueradio.org/radwrink.htm .

For boatanchors, I don't test any resistor below 1 meg in value unless I
have some reason to suspect it.

Note that "looking OK" is not a useful test. A capacitor or resistor that's
completely burned up will look burned up, of course. But they can also fail
with no outward sign.

Have fun!

Regards,

Phil Nelson

There seems to be an epidemic of these recently...

> The scan of the schematics are a bit fuzzy, however, and its not clear
> to me where power should be applied. I'm thinking the A supply is
> something on the order of 1.5 volts, and the B supply...? 64 volts?

OK - on the 12 position terminal strip - the connections are:

1) C.W. Bias control (see term #2)
2) AVC - connect to term #1 for CW; term #3 for AM (voice)
3) Diode load (see term #2)
4) BFO -1.5DC (connect to term #11 for BFO on -- leave open for BFO off)
5) Pilot light (gnd) to transmitter (not used in receiver leave open)
6) Chassis ground.
7) B+ 84VDC
8) AVC switch (see note #1)
9) minus bias supply -6VDC
10) Radio ground & A+ (plus of 1.5VDC goes here)
11) A- supply (minus of 1.5VDC supply goes here)
12) Antenna input.

Note #1 - There is are two resistors in series across the A source -
i.e. from term #11 - 220 ohm - tie point - 150 ohm - term #10. For AM
(voice) connect the tie point between the two resistor to term #8.

That was my point. When you use a non-polarized plug, you can't
control which side of the line is hot, so you have no choice but to
fuse both sides.

>fuse both sides.

Several companies used to supply gear with a plug that contained two fuses. This device is now banned by every safety agency. You can turn a non-polarized plug into a polarized plug if you want - just cut from the end into one of the holes on the blade you want to be the neutral. Spread the pin a bit if necessary so it will only fit one way. Keeps the authenticity of the plug, but guarantees it will only go in one way.

Pretty rare in most urban areas of the US, but I suppose some still exist. In this case, the only solution would be to replace them. They would have the same problem with a 3-wire cord.

Quite common in older houses in the Baltimore area, where I work. All
consumer products (radios, tvs, lamps, etc.) have 2-prong power cords.
If they're polarized, the user just trims the wide prong.

# 2141. TR-7400A BOATANCHOR QUESTION

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-18 16:16:56 UTC
From: robco@optonline.net
Message-ID: <6rre7vgijlhhv6oqld48ikj04lh7g1srd4@4ax.com>
Source record: 33464

My venerable 7400A(Kenwood) is no longer transmitting....been
told to check D-3 (switching diode???), and sure enough it was a dead
short in both directions....the manual that came with the 7400A does
not indicate what type of diode is required, so I replaced it with a
common power diode, hoping that it would work, or if it didn't fix it
correctly, it would indicate that it was indeed that diode by at least
some power output....but ALAS it did nothing, and I'm wondering if
some one of the you familar with the rig would offer some
suggestions...Receiver is fine, and when I key it, I can see an
indication of the correct frequency on a nearby rig, but just no meter
indication, and no RF output...am I in need of a fast recovery, or PIN
diode???? Many Thanks.....Bob

>That was my point. When you use a non-polarized plug, you can't >control which side of the line is hot, so you have no choice but to >fuse both sides.

OK, I will agree on that -- if you don't fit a polarized plug (like on an antique radio where you want the big old round screw-terminal plastic plug), fusing both sides maes sense, at least on an AC/DC set. That way, if the chassis is hot and bumps into a ground, the radio fuse will blow before the house fuse.

On AC/DC gear I would definitely use a polarized plug and cord unless authenticity was desired. 73, Mike K.

Got a Tektronix type 535A scope with a type CA dual trace plug in. Last time I fired it up it worked like a dream (and warmed the whole house too!) I'd like $75 for it FOB Seattle. Let's face it it's worth that for the knobs It would be best picked up but could be professionally packed though I think it would be very expensive. Please reply directly to N9PT@arrl.net. Picture on request.

Pete

## 2151. Collins knobs

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-18 23:24:16 UTC
From: John Mackesy <mack@melbpc.org.au>
Message-ID: <b589ls$g8s$1@possum.melbpc.org.au>
Source record: 33474

Originally part of a 479S-4A ILS Signal Generator, these knobs look like the most useful parts of it.

2 types:

1. Collins part no. 757-0233-003, 1.125" dia, .875" high, with skirt (2 available).
2. Collins part no. 757-0023-002, as above exc. .875" dia (5 available + 1 with a bent skirt)

They're all in fair to good condition - minor scratches, JPEG's available.

Manual for 479S-4A also available, or if you want the whole damn thing it could be yours. The bad news is that's located in Australia.

John Mackesy

Looking for somewhat of a project here, an older general coverage or ham receiver whether tube or solid state thats collecting dust on someones basement or closet, working or not, please email me with details. Thanks

gip11@yahoo.com

# 2166. Help - General Radio type 774 connectors for 916-A RF bridge

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-19 13:05:39 UTC
From: "owen.home" <owen.home@ntlworld.com>
Message-ID: <1YZda.304$vF.57772@newsfep1-win.server.ntli.net>

Help
I need to find some GR type 774 connectors for a recently found 916-A RF bridge, I don't think I've ever seen any here in the UK. I'd appreciate any help or pointers including dimensions of the connector in case I have to make some, I'm thinking of maybe turning down the thread on an SO239 barrel (i.e. socket to socket) as a short term measure.
I'd also welcome any comments on the 916-A bridge from anyone with experience of using one, the construction looks amazing. What would you think of running it with a modulated noise source generator?
I didn't get the two "unknown" connecting cables (long and short), the manual tells me they have 250ohm resistors in series - do you see any problems with making my own? I guess I should try it and see if I can balance the bridge.
Thanks
John

Maybe a rough idea of price and how much of a project you want to get
into would help?

Are you sure this isn't an 874? I've never heard of a 774, but there
are things in this world that I've not heard of ;-)

The 874 is a hermaphroditic connector. Any one will mate with any
other. There is no concept of male and female. The barrel is divided
into four segments, two are pushed in, and two pushed out, so if you
rotate the connector 90 degrees, you get a mating orientation. The
center conductor is simiilarly arranged.

You can find these all the time on ebay. They're not expensive. The
connector is rated for operation to 7.4 GHz (hence the name). The
simplest thing is to get adapters to BNC or such.

Search for 874 in Business & Industrial > Test, Measurement Equipment

There's an attenuator on ebay at the moment which includes two
874-to-BNC adapters, two 875-to-PL259 adapters and a 50-ohm terminator
with an 874 connector. The attenuator itself might be of interest.
And it's in the UK. See

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3013904397&category=1502

I'll try to dig up some info on the 916 bridge.

# 2170. FS Collins RE S-Line

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-19 14:38:43 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <Th%da.8416$jA2.819929@newsread2.prod.itd.earthlink.net>
Source record: 33493

I am continuing to sell off some of my Collins collection.
Here is another complete Collins Round Emblem S-Line. It consists of
the following:
1. Collins Round Emblem 75S3C Receiver loaded with filters;
2. Collins Round Emblem 32S3 Transmitter;
3. Collins Round Emblem 516F2 Power Supply with Cabinet;
4. Collins Winged Emblem 312B4 Speaker Console, Phone Patch, Power Meter;
5. Collins Round Emblem 30L-1 Amplifier with 4 new Jan/RCA 811A tubes;
5. Astatic 10-DA Mic;
6. All Original Collins Connecting Cables for the above station;
7. Original Manuals for the 75S3C, 32S3, 312B4, 30L-1. Copy for 516F2.
All equipment is in working order. It is in very nice shape cosmetically.
Overall CCA Very Good to near
Excellent. The 30L1 cabinet has been repainted. It is a nice job, but the
color is a slightly darker gray. Digital Pictures Upon Request . Also,
e-mail me for questions.
Price for the entire S-Line Station is $4500 shipped within lower 48.
Thanks, Charlie Hugg, K5MBX, CCA 307

Leigh
Thanks for the reply, the connector is not the hemaphrodite type and the manual details it as a 774 series, it is from the 1940s so I guess it's an earlier type. The panel connector has a recessed hole about 1/2" diameter with a sunken centre pin, there is a lip raised above the panel around the hole which may mate with an outer sleeve on the cable jack - shouldn't be too hard to fabricate something.
Thanks
John

Have you opened up theunit to see how much space there is? If all else fails, you might consider replacing the connector with an N type, or such.

Exactly. I mean, I _could_ offer a "project" R-390A, if you want
to ship 85 pounds of stuff from here to there. There's sure enough
work in any one R-390A to satisfy anyone.

Hi John,

Modulated noise source? Well, anyway, noise used as a source will
require a VERY large amplifier to work to any degree of precision.
The problem here is that noise sources suffer both from evenness of
output level across frequency for one, and low output level at any one
frequency for another.

These class of bridges will exhibit extremely deep nulls (100dB
easily) that in turn require at least drive levels of 0dBm to allow
you to find the bottom of the balance at 1ï¿½V (using a communications
receiver as the detector). 0dBM doesn't sound like much from a
source, until you spread it across the spectrum instead of offering it
to one frequency.

My noise source is a Photomultiplier tube that is weakly illuminated
by a constant illumination and offers a very wideband and flat
operation out to a hundred MHz, but needs amplification (which then
upsets this even power distribution) to do a low precision measurement
(not very satisfying). Instead, I use an HP 608F VHF Signal Generator
(actually starts at 10MHz) which has a rock solid stable output (very
important that 100dB deep nulls don't drift).

As far as connectors go, the only one that counts is the "unknown"
terminal. The source and detector can easily be converted (easily in
the sense of just go ahead and do it without concern) to any connector
technology you wish. For that matter, the "unknown" connector is (for
my bridge) a simple stud. I converted that to accept a connector (a
flying design where the center pin screws into the stud, and the shell
is supported by a sheet of copper tied off to the nearby ground
connection).

A picture of this is available on request.

Hi Pete,

Useful, I am sure, but with only 1mW across 1.3GHz, this works out to
roughly -60dBm for any frequency that is received with a 10kHz BW.
This is being quite generous, but for the purposes of driving a good
bridge, this excitation (albeit well over S9) is just not enough.

# 2180. General Radio RF Bridge program

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-19 21:52:08 UTC
From: "Roger D. Johnson" <n1rj@pivot.net>
Message-ID: <3E78E688.81280B79@pivot.net>
Source record: 33353

I sent a message to Owen asking if he would like a copy of a BASIC program I wrote long ago to do the corrections for GR Bridge measurements. It then occured to my fevered mind to offer it to all on the group.

I wrote it in Q BASIC so I could compile it and run it under Windows (shows how long ago it was!). It will do the corrections for a component directly at the bridge terminals, the long and short connecting leads, for a coax connector*, and for a shunt capacitor range extender. It will also rotate the impedance back through a length of lossy coax. I believe all the GR bridges are basically the same differing mainly in mechanical construction. In any event, it should only require minor tweaking to work with your bridge.

Send me an email if interested and I will send both the BASIC and compiled versions.

73, Roger

* I mounted a coax connector on a piece of Al angle that I fasten under the panel mounting screws. This allows direct connection of a coax line for measurement. There is a small shunt capacitance which the program compensates for.

I have a dead B&K E-200D signal generator that I picked up really cheap. I have inquired with manual suppliers on the web, but they really rape you with their pricing. It's hard for me to justify $35 for a Xerox of a service manual.

Anyone have a service manual, operating manual, or schematic that they would like to sell? If yes, e-mail me at exar50@netscape.net

Thanks

John -

Well, http://www.smcelectronics.com/OWNER.HTM has it for $7.50. Not a
bad price, and certainly not $35.

May I suggest that if you get the manual, you donate an e-copy to the
largest free manual archive, http://bama.sbc.edu.

> And how do you use it? The light above the dial keeps flashing on my R-1051..is
> that a problem?

The purpose of the vernier dial is to tune on other than even 100-Hz
boundaries. There is a ring around the vernier dial, with eleven
positions: V, and 0 through 9. When it is in "V", the vernier (or
variable) knob controls fine tuning; otherwise, the ring controls
fine tuning in 100-Hz increments.

The light flashes when the ring is in the "V" position as a warning
that the radio is in variable-tuning mode.

Source record: 33360

Help! Gentelmen, I have an HT-37 and Drake 2B. I am trying to hook up a dow-key relay. While I do have the instruction manuals for both rigs and the sheet off of the bama website for the dowkey, I still am not comfortable with how I am supposed to hook it all up. I think I understand that terminals A and D will hook up to the mute and ground on my Drake. I am unsure however where the dowkey hooks to the transmitter. The dowkey instructions say terminal B and F on the relay, but not sure where to go to the transmitter. If anyone knows how this is supposed to work, please give me your input. Thanks!!

I think I know what you mean; I had been using it with a Spectrum Analyzer,
to characterize filters. It sounds like it would need extra amplification
in order to meet the needs of a bridge.

Dave,

I can probably help you with this. I have questions for you:

Where are you getting the 115 VAC for the relay coil? Are you
getting it from the accessory socket on the HT-37?

Are you planning to use the HT-37's function switch to control
system T/R switching?

Your answers to these questions will help me answer yours.

# 2192. B&W 2Q4 module question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-20 15:10:38 UTC
From: gpatterson53@hotmail.com
Message-ID: <9c2b8e62.0303200710.7e939bf0@posting.google.com>
Source record: 33365

I'm trying to use the 2Q4 in a circuit. All circuit references show it being driven by a low impedance source. The 2Q4 internals look to be in a high impedance config to me. Does anyone know if I can drive it with 10k or above impedance and still get the proper phase shift?

tnx

Gary W4AF

>
> Gary W4AF

No, they need to be driven by a low impedance source (and feed
a high impedance source).

If you look closer, while all or most of those old circuits are
driven by a transformer, with a 500 or 600 ohm winding feeding
the 2Q4 side, there is always a 500 ohm resistance across the
winding. That defines the impedance that the 2Q4 sees. That
500 ohm resistance actually sets a "center tap" because each
side of the 2Q4 needs to see a different voltage level (due to
different insertion losses in the network). Usually, it will be a 500ohm
pot, and it will never be adjusted to exact center. Once in
a while it will be precision resistors forming he voltage divider.
(If you dig through enough material, you will be able to find
the exact ratio, and simply use precision resistors.)

Think about it. While the resistor values in the network are in
the kilohm range, if you don't feed it with a low impedance circuit
the feed impedance will start affecting the network response, in effect
adding resistance to those large resistors; 500ohms is relatively small
compared to the resistors inside.

Note that there were other commerically available phase shift networks,
and undoubtedly homebrew equivalents, and they may not be designed
for the same feed impedance.

What isn't necessary is the transformer. I've seen solid state circuits
feeding the 2Q4 where it's a simple bipolar transistor, with outpus
off both the collector and emitter (to provide 0 and 180 degrees
signals needed by the network) and the resistors in the colelctor and
emitter are of the value needed for the level ratio needed by the
network. This suggests other schemes, of a similar nature.

Source record: 33369

I have an early Collins 51J-4 Receiver for sale. It has a SN of 4XX. It is in nice physical condition. The front panel is super. There is a small spot beside the name tag where another tag has been stuck on at one time. There is some glue left. It could probably be removed. All knobs are original. The Khz Dial is perfect. The Mhz Dial has some bad spots so would need to be placed. The receive is complete including the top and bottom covers. It does not have the handles.
It has two Collins mechanical filters, the 1.4 and 3.1. The receiver does work. However, it will need a good alignment.
Some of the bands work and others don't. The dual plug in capacitor, C117, has been replaced with one taller than the original, but it works well. No hum in the audio. Price is $575 plus shipping from 79602. Digital pictures are available upon request. This would make a great receiver with a little cleaning and alignment work Thanks, Charlie Hugg, K5MBX CCA 307

Thanks Michael:

Great info. Please bear with me but, I was envisioning the low impedance feed as doing the r1*r2 over r1+r2 thing and significantly affecting the 2Q4 internals and that maybe that was taken into account in the design of the internal values. So you had to feed it with 500 ohms. Any thoughts? Another thing is the insertion loss. I was trying to feed it with and op amp with 7 volts pp and got next to nothing on the other side. The tube circuits I have looked at look like they hit it with 30 or so volts.

## 2216. Seeking information on a spinner knob

Newsgroup: rec.radio.amateur.boatanchors
Date: 2003-03-21 16:15:48 UTC
From: garsaler@aol.com
Message-ID: <70ab4b84.0303210815.30abde55@posting.google.com>
Source record: 33389

I have not posted here before but hopefully, someone in this group can assist me in finding some information. I am in possession of what looks like a spinner knob for an ARC-5 but apparantly is not. The spline is different (12 teeth) as are the threads. It has a number stamped on it of CBY-23022 and is aluminum with a black handle. It is 1 1/2" in diameter. There is a knurled collar flush with the back side that screws to some device. The spline is flush inside of the collar. Through some research I have discovered that CBY is a designation used by the Aircraft Radio Corporation. Any assistance will be greatly appreciated. Thanks in advance.

# 2217. Re: E-200D Signal Generator Service Manual

Thanks. I contacted them and it is just an owner's manual. No
schematic or service info. But it's a start.

Brian
